LIMITED ACCESS

This improvement is especially designed for through traffic and has been declared a limited access highway or freeway from Station 555+00 to Station 634+50 by action of the Director of Highways in accordance with the provisions of Sec. 5511.02 of the Revised Code of Ohio.

The Standard Specifications of The State of Ohio, Department of Highways including changes and Supplemental Specifications listed in the proposal shall govern this improvement.

I hereby approve these plans and declare that the making of this improvement will not require the closing to traffic of the highway and that provisions for maintenance and safety of traffic will be as set forth in these plans and estimates.

The right of way for this improvement will be provided by The State of Ohio.

GENERAL NOTES

GENERAL

DESIGN SPEED

Design speed on this project is 50 M. P. H., however the design speed on the northbound lane is 60 M.P.H. and on the southbound lane 50 M.P.H.

FIELD OFFICE

The contractor shall provide a suitable field office in accordance with Section S-0.01 (b), Structures General, having a minimum floor area of 500 sq. ft. The contractor shall have a telephone installed and maintained during the construction of this project.

DATUM

All elevations are referred to U. S. C. & G. S. Datum.

STATIONING

In general, stationing indicated on the Plans is along the centerline of the new lane, regardless of the direction of flow of traffic. In locations where the two lanes are not concentric, both lanes are stationed individually. The northbound lane is indicated by the suffix "N" and the southbound lane by the sufflx "S" after the stationing.

TRAFFIC

At least ten (10) days before any interruption of the normal flow of traffic within the project limits, the contractor shall submit to the Director in writing his proposed methods and procedures planned for the maintenance of traffic throughout the life of the contract.

The Contractor, to the satisfaction of the Director, shall plan and conduct his operations so that two way traffic, without detours, shall be maintained at all times consistent with the requirements of Sec. T-35.23 and as set forth below.

The Contractor shall provide temporary cross-overs between new and existing pavement as required to maintain traffic. Suitable access shall be provided to all driveways and side roads at all times, as approved by the Engineer.

Aggregate and chloride used for maintaining local traffic shall be applied on temporary roadways as directed and in the amounts requested by the Engineer (see General Summary for quantities) and shall be paid for at the unit price bid for Item S-15, Furnishing and Placing Aggregate for Traffic Bound Surface Course and Item S-15 Furnishing and Applying Calcium Chloride or Calcium Magnesium Chloride. The hardness and soundness requirements of the Construction and Material Specifications shall be waived for the traffic bound surface course.

HISTORICAL AND MEMORIAL MONUMENTS AND MARKERS

Historical and memorial monuments and markers shall be carefully removed, stored and reset where and as directed by the Engineer, in accordance with the provisions of Section G-7.09 of the Construction and Material Specifications.

RAILROAD TRAFFIC

See Special clauses in proposal as to protection of railroad traffic.

CONSTRUCTION LAYOUT STAKES

See note in Proposal describing work included in this Lump Sum pay item.

ROADWAY

REMOVAL AND DISPOSAL OF UNSUITABLE MATERIAL

It is anticipated that certain areas will be encountered where the existing material is unsuitable for use as embankment or to support embankment. The Contractor shall make explorations for, and removal of, unsuitable material as directed by the Engineer. The Contractor is referred to Item E-1, Roadway Excavation, for basis of payment, method of disposal, etc. When approved by the Engineer, unsuitable embankment material may be wasted within the limits of the R/W, but outside roadway construction limits, providing it is covered with at least one foot of earth and left in a sightly condition. All materials so removed shall be measured and paid for as Item E-1, Roadway Excavation.

REMOVALS (MISCELLANEOUS)

Building foundations, steps, walls, aquaduct structures, or other similar structures shall be excavated to a depth of three feet (3') below the proposed subgrade, or twelve inches (12") below finished surface if located outside the pavement limits but within the R/W or easement lines.

The removal of existing rigid concrete pavement either with or without surface courses shall be paid for at the contract unit price bid per square yard for Item E-8, Removal and Disposal of Existing Pavement. The removal of existing flexible pavement without rigid base shall be paid for at the contract unit price bid per cubic yard for Item E-1, Roadway Excavation. Wherever a portion of pavement remains in place, the cutting and trimming shall be neat and to the line shown on the drawings. No extra payment shall be made for cutting and trimming.

Removal of existing sidewalk when replaced by new sidewalk shall be paid for in the unit price bid for the new sidewalk, I-13. Removal of the existing sidewalk not to be replaced by new sidewalk shall be paid for as E-8, Removal and Disposal of Existing Sidewalk.

Wherever the proposed concrete sidewalk adjoins or abuts an existing sidewalk the existing walk shall be cut and trimmed to a neat line as shown on the Plans. Payment for cutting and trimming shall be included with sidewalks and shall be paid for at the contract unit prices bid for Items I-13, Sidewalks and Concrete Steps.

The contents of all existing privies or septic tanks, upon which embankment is to be placed, shall be removed and the empty pit backfilled with material meeting the requirements of Section E-1.08. The cost of removing and disposing of contents shall be paid for at the unit price bid per cu. yd. of "Roadway Excavation, Item E-1".

The removal and disposal of any existing pavement, sidewalk, head walls, pipe curbs, foundations, retaining walls, concrete or masonry posts, wells, septic tanks, curb drains or other masonry, street railway rails and ties, guardposts, flagpoles, fences, billboards, or other similar items, lying within or below the limits of the Roadway Excavation, Item E-1, Excavation for Structures, Item E-2, and not specifically paid for under a separate item are classified as excavation and are paid for as additional excavation under the excavation item of which they are a part.

REMOVAL OF TREES AND STUMPS

Trees or stumps, shall be removed or preserved as indicated on the Plans by the following symbols:

Trees or stumps to be removed . . . .
Trees to be preserved . . . . . 

ROADWAY (CONT'D)

The number of trees or stumps to be removed, as indicated by the above symbol, is approximate and the State of Ohio reserves the right to order the removal of additional trees or stumps, even though these trees or stumps are not indicated on the Plans or are indicated to be preserved.

Payment for the removal of these additional trees or stumps is included in the lump sum bid for the Removal of Trees and Stumps, Item E-9.

SUBBASE ITEM I-22

All 9" T-71 pavement throughout the job shall have a subbase of I-22 as shown on the Typical Sections. The I-22 shall be either Grade, A, B, C or D.

ROUNDING OF CORNERS ON CROSS SECTIONS

The rounded corners, shown on Standard Drawing RI-1 apply to all cross sections even though otherwise shown in these Plans.

SIDEWALK EXPANSION JOINTS

In addition to the expansion joints specified in Section I-13.06 of the Construction and Material Specifications, 1/2" of premo lded expansion joint shall be provided wherever the sidewalks or median pavement abut longitudinal curbs or other permanent structures. One layer of 1/2" material may be used in lieu of the two 1/4" layers specified in Section I-13.06. Payment for the 1/2" premo lded expansion joint material is included in the price bid per square foot for Item I-13, Sidewalks, or when used for median pavement, payment is included in the price bid per square yard for Item I-21, Portland Cement Concrete Median Pavement.

Existing street signs, traffic markers, and other similar objects within the limits of the construction shall be removed and stock piled as directed by the Engineer. Payment for removal and stock piling of these items shall be included in the contract price bid per cubic yard for Item E-1, Roadway Excavation.

FILLING OF BASEMENTS, WELLS, ETC.

All basements, wells, cisterns, holes resulting from the removal of storage tanks, etc. located wholly or partly within the right-of-way limits of this project except in excavation areas shall be filled to the contour of the surrounding ground and compacted as per Item E-1.08. This work shall be done as soon as possible in order not to leave an unsightly and dangerous condition any longer than is absolutely necessary. Payment for the above work is included in Item E-1 Roadway Excavation.

FERTILIZING AREAS TO BE SEEDED OR SODDED

All areas to be seeded, under Item L-9, or sodded, under Item L-10 shall have commercial fertilizer (10-6-4) applied at the rate of twenty (20) pounds per 1000 square feet.

PLACING SOD

Sod shall be placed so that the top of the sod coincides with the finished surface as shown on the cross sections. All earthwork necessary to accomplish the above is included in the contract unit bid per square yard of sod.

SUBGRADE COMPACTION FOR DRIVES AND CROSSOVERS

The subgrade under drives and crossovers having a crushed aggregate base, Item B-119, or paved with 7" or 8" of T-70 shall be compacted to a depth of six (6) inches to the density requirements of Table III, Item E-1. Payment for subgrade compaction as specified above shall be included in the unit price bid for Item E-1, Roadway Excavation.

GENERAL NOTES (CONT'D)

ROADWAY (CONT'D)

SEEDING QUANTITIES

Quantities for seeding are calculated for the soil areas between lines ten feet (10') outside the construction limits as shown on the cross sections or to the R/W line if such line is less than ten feet from the construction limits. All areas outside these limits where the vegetative growth has been injuriously disturbed or destroyed by the contractor, shall be restored and seeded in accordance with the provisions of Item L-9 by the contractor at his own expense.

The mixture of seed to be used in rural areas shall be as specified under Item L-9.

The seed mixture for urban and residential areas as designated by the Engineer, shall be as follows:

20% Kentucky Bluegrass (Poa pratensis)
20% Kentucky 31 Fescue
40% Creeping Red Fescue (Festuca rubra)
15% Red Top (Agrostis alba)
5% White Dutch Clover (Trifolium repens)

GUARD RAIL

Guard rail shall be flared to meet bridge railing in such a manner that the change in alignment of the guard rail will not exceed one (1) foot in 10 feet.

The removal of any guard rail or guard rail posts lying within the limits of roadway excavation or embankment (and not specifically paid for under a separate item) is included in the Contract Unit Price per cubic yard bid for Item E-1, Roadway Excavation. All resulting materials shall become the property of the Contractor and shall be disposed of by him at no extra cost to the State, except steel rail on all existing steel beam type guard rail shall be stored on the right-of-way at the disposal of the State Maintenance Forces.

PAVEMENT

SUPERELEVATION

Superelevated curves shall be built without crown. The crown shall be worked out of the pavement in accordance with the elevations shown in the Superelevation Tables.

PLACING AND FINISHING ASPHALTIC CONCRETE

The requirements under Sec. T-35.18 for mechanical equipment for placing and finishing asphaltic concrete are hereby waived for areas less than 5 feet in width or where surface is deformed; and the asphaltic concrete may be spread and finished by acceptable hand methods. Dump boards will be required if spread and finished by hand method.

The requirements under Sec. T-35.19 for rollers are hereby waived to permit the use of but one (1) roller, meeting the requirements of the specifications.

ITEM T-30 BITUMINOUS TACK COAT

For tack coat bituminous materials see note in proposal

PAVEMENT (CONT'D)

ASPHALTIC CONCRETE BASE COURSE

Asphaltic Concrete base course may be constructed of Type "A" surface course composition, at no additional cost to the state.

SUBBASE COURSE

In the final finishing of slopes and ditches, care shall be exercised to assure that the exposed edge of the subbase course will be left free of earth cover that would impede free drainage.

HAND FINISHING

Hand finishing will be permitted as per Section T-71.211 for the reinforced Portland cement concrete pavement on this project at the following locations:

1. Intersections and cross-overs.
2. Sections where the sharp curvature prevents the use of finishing machine.
3. Sections where the maintenance of traffic requires hand finishing.
4. Variable width lanes which in the opinion of the Engineer requires hand finishing.

EXPANSION AND CONTRACTION JOINTS

Where transverse joints are located closer than 10 feet to the regular blockout joints around catch basins, manholes and water valves, the blockout joints shall be continued to the transverse joint. Similarly where longitudinal joints are located closer than 2 feet to the regular blockout joints around catch basins, manholes and water valves, the blockout joints shall be continued to the longitudinal joints.

TREATMENT OF EXISTING PAVEMENT AT END OF NEW PAVEMENT

At terminal points between new and existing pavements any difference in grade between the two pavements shall be corrected by filling with T-35, Type C, as approved by the Engineer. Where the new pavement is above the existing pavement the difference shall be corrected by filling over the existing pavement as indicated on the Plans. Where the new pavement is below the existing pavement the existing pavement shall be removed to a depth at least 1 1/4 inches below the new pavement.

Removal of existing pavement as described above shall be paid for at the contract unit price for Item E-8, Removal and Disposal of Existing Wearing Course. An estimated quantity of 300 sq.yds. is included in the General Summary

Filling shall be paid for at the contract unit price for Item T-35 Asphaltic Concrete Surface Course.

existing pavement, the cost of sealing the resulting joint shall be included for payment in the price bid for Item T-35, Asphaltic Concrete Surface Course, as per Item T-35.18 of the Construction and Material Specifications.

CONTRACTION JOINTS

In addition to the pavement joints detailed for approaches and intersections the maximum distance between contraction joints shall in all cases be in accordance with Standard Drawing TJ.

PAVEMENT (CONT'D)

RESURFACING

Where crushed aggregate is used as a wedge course to build up the shoulder to meet the edge of the new pavement, compaction of the subgrade under the crushed aggregate shoulder as specified under Sec. 1-18.03 is hereby waived on this project.

The contraction joints in the pavement shall extend through the curb. The contraction joints in the curb shall be of the premolded type, 3/8" thick in lieu of the kind that is in the pavement, and shall be cut to conform to the contour of the curb before being placed. Extreme care shall be used in placing this material at the proper alignment with the contraction joint in the pavement.

Premolded expansion joint material shall meet the requirement of Sec. M-10.02 or Sec. M-10.03, and poured joint seal material shall meet the requirements of Sec. M-10.23 or Section M-10.26. Payment for expansion and contraction joints in pavement shall be included in contract unit price bid per square yard for Item T-71, Reinforced Concrete Pavement.

FLEXIBLE FORMS

Approved flexible forms shall be used for construction of circular pavement edges having a radius of 100 ft. or less, circular concrete curbs and concrete curb transitions of short radii.

SEWERS

SEWAGE

The Contractor shall conduct his operations so as to maintain any authorized sanitary sewage flow uninterrupted throughout the construction period. Any unauthorized sanitary sewers shall be sealed as described below.

Any additional costs involved in maintaining this flow, by pumping or by any other approved method which is necessary for construction of the project, shall be included in the contract unit price bid per linear foot of pipe.

LOCATION AND SIZE OF EXISTING PIPE

The location, type, depth and size of all existing pipe and house connections affected by this project are shown as nearly exact as available information will permit. The State of Ohio will not be responsible for any variations found during construction.

INLETS, MANHOLES AND PIPES

The proposed elevations and locations of inlets, manholes and pipes and the estimated lengths of pipe may be adjusted by the Engineer during construction.

ITEM SPECIAL - Furnishing and Installing 24" Cast Iron Pipe

The 24" Cast Iron pipe shall conform to the specification requirements of the American Standards Association A-21.2 ClassA. Method of measurement and basis of payment shall be in accordance with Sec. I-2.08 and Sec. I-2.09 of the Construction and Material Specifications.

ITEM I-3 Roadway Drainage With Porous Backfill

If corrugated Metal Pipe, Sec. M-64(c), is furnished for Roadway Drainage with porous backfill, it shall be perforated in accordance with Sec. M-6.4(b).

GENERAL NOTES (CONT'D)

SEWERS (CONT'D)

SEALING OF PIPE

All pipes entering or leaving existing manholes, catch basins, inlets or culverts, which are indicated to be abandoned, sealed, removed, filled or otherwise made inoperative shall be sealed at both ends if practicable, unless otherwise indicated on the Plans. Payment for this work to be included in the pertinent item involved.

Wherever any existing pipes, regardless of their nature, which are inactive or are to be abandoned are encountered in construction operations, they shall be sealed on both sides where broken into. In any case if the inlet or outlet ends of such pipes are presently exposed, they shall be sealed prior to backfill or construction of embankment. Payment for this work shall be included in the contract unit price bid for Item E-1, Roadway Excavation.

Sealing of pipes shall be accomplished by the proper installation of a suitable precast concrete plug, or the construction of a bulkhead of brick or concrete masonry with a minimum thickness of 12".

UNRECORDED CONNECTIONS

Any unrecorded active connections to the sewer through existing catch basins or manholes to be removed or abandoned encountered in construction shall be reconnected to the sewer as the Engineer may direct. Payment for this work shall be included in the contract unit price bid per linear foot for Item I-2, Storm Sewer.

CONCRETE COLLARS

Concrete collars as required by the Plans or requested by the Engineer shall be constructed of Class "C" Concrete and shall be not less than 6" in least dimension from any exterior surface involved. Payment shall be included in the contract unit price bid for the pertinent pipe item involved.

DISPOSAL OF CASTINGS

Castings of manholes, inlets, or catch basins which are to be relocated, abandoned or removed shall be removed in accordance with the Provisions of Item I-16. Castings of manholes which are to be adjusted to grade shall be removed, stored and reset by the Contractor.

All existing castings which are removed shall be stored on the right-of-way at the disposal of the State of Ohio.

SEWERS (CONT'D)

SEWER HOUSE DRAINS

Existing House Drains. All existing house drains, which includes yard, roof, basement or other similar pipe drains, now in use which are disturbed because of the Highway improvement shall be replaced by the Contractor. Where an existing house is to be removed, the upgrade end of the existing house connection shall be plugged and accurately referenced if the existing house connection remains satisfactory for future use. Payment for plugging is included in the unit price bid for Item E-1, Roadway Excavation. Estimated quantities of I-3 pipe to be used for reconnecting disturbed drains are included in the summaries.

Proposed House Connections. The State of Ohio will notify property owners in advance of construction that if they contemplate new house connections to the proposed sewer, the property owner must furnish, at his sole cost, tees of the proper size and material to the Contractor. The Contractor will then install the tees as he proceeds with laying the sewer and payment for the work involved will be at the same rate as though he were furnishing and laying straight pipe.

To obtain a house connection to either an existing sewer that is to remain or to a proposed sewer, the property owner or his agent, at his sole cost, shall furnish all material and labor required to install the house connection from the carrier sewer to a point beyond the limits of roadway construction.

COOPERATION BETWEEN CONTRACTOR AND PROPERTY OWNER

The Contractor must cooperate with the property owner or his agent to give said property owner or his agent ample opportunity for extending said sewer connection from the tee branch or existing sewer to a point beyond roadway construction limits. The necessary house connections shall be installed by the property owner or his agent at no cost to the Contractor, other than the cost of cooperation in scheduling his work which said cost shall be assumed by the Contractor and shall be included in the unit prices bid for the various sewer items.

REMOVAL OF EXISTING HOUSE DRAINS

The removal of all existing house connections, which includes sanitary, yard, roof, basement or other similar pipe drains within the roadway excavation limits shall be classified and paid for as Item E-1, Roadway Excavation.

STORM SEWER UNDER RAILROAD

To carry storm sewage under the tracks of the Baltimore and Ohio Railroad. 75 feet of 48" tunnel liner plate will be installed under the tracks by the Railroad, at no cost to the Contractor. The Contractor shall cooperate with the Railroad in every way to permit the work to proceed as expeditiously as possible.

MISCELLANEOUS

DUMPED ROCK FILL FOR CHANNEL PROTECTION

The masonry material used for the Dumped Rock Fill shall be obtained from the Removal of Existing Structures, Item S-24 or Item S-22 or from Item E-8, Removal of Existing Pavement. Larger size material than that which is specified in the Construction and Material Specifications may be used providing a reasonable smooth and continuous surface conforming to the lines shown on the Plans is obtained. All dumped rock used at the outlet of culverts shall be uniformly placed so that at least fifty percent (50%) of the pieces will weigh at least 75 pounds.

Dumped Rock Fill shall be placed as shown on the Dick's Creek Channel Relocation drawing.

The excavation required to place Dumped Rock Fill along the proposed channel shall be paid for as Channel Excavation, Item E-3. Payment for all other work involved in obtaining and placing the Dumped Rock Fill shall be included in the price bid for Dumped Rock Fill as per Plan, Item I-10.

FILL FOR DICK'S CREEK CHANNEL RELOCATION

All fill material placed in connection with the realignment of the existing Dick's Creek Channel shall meet the specification requirements for embankment as set forth under Item E-1, Roadway Excavation.

RIGHT-OF-WAY MONUMENTS, FEDERAL PROJECT MARKERS & SECTION MARKERS

Existing Right-of-Way Monuments, Bench Marks, Federal Project and Section Markers that will be removed by construction, shall be protected by the contractor as per Section G-7.09 of the Construction and Material Specifications until they can be witnessed, referenced and reset by the Construction Field Crews.

UTILITIES

GAS AND WATER LINES

All work required for removing, relocating, or constructing new facilities for private or public utilities and appurtenances as shown on the plans will be done by and at the expense of the respective owners unless otherwise noted on the plans.

UTILITY POLES

All work required for removing or relocating utility poles and towers as required by the construction of the roadway and appurtenant facilities will be done by others. The Contractor must cooperate and coordinate his work with the other contractors to allow their work to proceed with a minimum of delay and cost.

GENERAL NOTES (CONT'D)

WATER LINES

GENERAL

The work of installing the water mains shall be accomplished in accordance with all the applicable provisions of the State of Ohio Department of Highways - Construction and Material Specifications - and these specifications together with the drawings. In general these specifications cover materials and items of work which are peculiar to the work of installing water mains. Items of work which are described in detail in the Ohio Department of Highway Specifications shall be adhered to unless otherwise specified.

WORK TO BE DONE

The installation of the water mains shall include all material, labor, equipment, services, and accessories necessary to complete the work as shown on the drawings and here specified. The major items of work are on S. R. #73 and include (1) Relocate 8" water main between Station 8+87 and Station 16+70. (2) Relocate 2" water main and meter from Station 15+20 to Station 13+89. (3) Relocate fire hydrant from Station 13+92 rt to Station 13+97 lt. (4) Relocate various house service curb boxes and meters.

MATERIALS

Water pipe shall be mechanical joint cast iron pipe centrifugally cast, Class 150, in accordance with Federal Specification WW-P-421 Type I or II. Joints shall conform to A. S. A. Specification A21. 11.

Fittings for mechanical joint pipe shall be suitable for the type and class of pipe with which they are being used.

Bolts for flanged joints shall be stainless steel.

Pipe and fitting used with water shall be tar coated inside and outside.

Casing pipe shall be butt or spiral welded in accordance with A. S. T. M. 139.

Joints for steel pipe shall be field welded.

Steel casing pipe shall have metal thickness of not less than 1/4".

Valves shall be in accordance with AWWA Standard Specifications C 500 - 52 T for gate valves for ordinary water work service. Valves shall be for 150 p. s. i., working pressure, cast iron body, bronze mounted, parallel seat, double disc non-rising stem, nut operated.

Corporation cocks for water service connections shall be 3/4" size and fitted for flared copper connection. Corporation cocks shall be Mueller or equal.

Curb stops shall be 3/4" size for water fitted for flared copper connections for water. Curb stops shall be Mueller or equal.

Curb boxes shall be 2-1/2" diameter and adjustable height between 30" and 42". Cover shall have in raised letters the word "WATER". Curb box shall be Clow-National F2450 with F2494 cover or equal.

LAYING OF PIPE

(1) Care shall be taken not to damage the tar coatings. Pipe shall be laid upon an undisturbed foundation giving uniform bearing with the holes dug for the joints.

Ends of pipes in trenches shall be closed when pipe is not being layed. Water main shall be installed 3 feet deep and in general shall follow the contour of the finished grade. (2) Joints for mechanical joint pipe shall be made up in accordance with the recommendation of the manufacturer. (3) Backfilling shall be done in accordance with the Ohio Department of Highway Specifications Section E-2.08 (4) Care of other services. All underground sewers, drainage, water, gas, electric, or telephone services which are encountered shall be cared for and maintained as part of this work. If any such services are injured or disturbed this contractor shall arrange for their restoration by the respective owners at no additional cost to the contract.
All known underground services and structures are shown for the convenience of the contractor. No assurance can be given as to the completeness or correctness of such underground features. (5) Fire hydrants and curb stops shall be blocked suitably supported. (6) The installation of all water mains shall be placed into service with the minimum of interruption to the normal service. All water mains shall be installed, tested, chlorinated and filled with potable water before service taps are made. The contractor shall work with the Butler County Engineer in placing the mains and service connections into normal operating service.

TESTING

The water mains shall be tested under a pressure of 150 p. s. i., in accordance with the AWWA Standard Specification for laying cast iron pipe modified for mechanical joint pipe. The pipe lines shall satisfactorily pass the pressure test before service connections are made.

CHLORINATION

After satisfactory installation and testing of the water mains they shall be chlorinated in accordance with the AWWA Specification.

Backfilled trenches shall have the surface restored as soon as possible. The restoration of the surface shall be such as to match the surrounding surfaces.

Clean up of work area shall consist of the removal of surplus material in order to leave the entire site free and clear and in good condition.

PROPOSED STRUCTURE

TYPE: Continuous rolled beam with reinforced concrete deck and substructure.

SPANS: 38'-6" - 77'-0" - 38'-6" c. to c. bearings
SKEW: 12°-10'
WEARING SURFACE: 1" monolithic concrete
SAFETY CURBS: 2 @ 2'-0"
ROADWAY: 68'-0" curb to curb
APPROACH SLABS: 25'-0" long
LOADING: Standard lane loading as per State of Ohio Design Specifications for Highway Structures, October 1, 1951, with revisions dated July 15, 1952 & April 1, 1954. CF=400

HORIZONTAL SCALE: 1"=40'

SUGGESTED INSTALLATION PROCEDURE FOR PROPOSED SEWER RELOCATIONS

Step 1: Block exist. 24" Outlet Pipe in exist. MH. @ Sta. 4+15 A Lt. so that flow will go thru exist. over flow pipe to Dick's Creek.

Step 2: Build prop. MH on exist. 24" @ Sta. 3+43A Rt. but do not open exist. pipe.

Step 3: Build prop. 24" Sewer & MH's between 3+43A Rt. & 590+04 Lt.

Step 4: Break exist. pipe in new MH. @ 3+43A Rt. & divert flow through new sewer. Seal old 24" pipe where it leaves new MH. Crystal Tissues Co. shuts down on certain Sundays. Step 4 can be accomplished on those days.

Step 5: Build part of proposed 24" Storm Sewer between Mod. No. 2 MH & Dick's Creek.

Step 6: Outlet exist. 21" sewer to prop. No. 2 MH & divert flow to Dick's Creek.

Step 7: Build prop. MH @ 3+50A Lt. on exist. 12" sewer but do not open exist. pipe.

Step 8: Remove exist. 21" between Mod. No. 2 MH & Sta. 5+10 AL Lt. & Build prop. 21" sewer from Mod. No. 2 MH to a point near prop. special MH @ 5+10 AL Lt. Do not build special MH. Abandon exist. MH on 21".

Step 9: Build prop. 12" sewer from MH @ 3+50A Rt. to a point near special MH @ 5+10 A L Lt. Do not build special MH. Do not break exist. 12" in MH @ 3+50A Rt.

Step 10: Build MH on exist. 21" @ Sta. 590+13 Lt. Provide 12" Stub in MH to connect to exist. 12" sewer at a later time. Seal upstream end of exist. 21".

Step 11: Build prop. 30" sewer from Sta. 590+13 Lt. to a point near prop. special MH @ 5+10 AL Lt.

Step 12: Build special MH @ 5+10 AL Lt., connect prop. 12", 21" & 30" sewers. Break exist. 12" sewer in MH @ 3+50 A Rt. & divert flow through new 12". Seal existing 12" pipe where it leaves new MH.

Step 13: Connect exist. 12" to new MH @ Sta. 590+13 Lt.

Step 14: Connect exist. 21" sewer to new 21" sewer through Mod. No. 2 MH with 24" C.I.P.

Step 15: Abandon exist. MH's on exist. 12" & 24" sewers @ 4+15 A Lt. & 4+22 A Lt. Seal ends of exist. pipes

The above is merely a suggested sequence of operations. The Contractor may deviate from this method if he wishes, as approved by the Engineer

All locations & elevations are approximate only & are from the best available information.

The existing 2" Water Line is to remain in place.

All existing sewers that remain in place but are not to function after the new work is completed shall be sealed in the manner set aside under Item I-16 wherever they are encountered. Payment for sealing the pipes will be included in the other pertinent items in the work.

Extreme caution must be exercised while installing the sewers through the existing levee. The Contractor will be held responsible for any flood damage caused by opening up the levee.

The following minimum grades shall hold:
- 12" Sanitary – 0.30%
- 21" Sanitary – 0.12%
- 24" Indust. Waste – 0.20%

Flow must be maintained at all times. The cost of any pumping which may be required to maintain flow shall be included in the unit cost of the various items in the contract.

Flow of sanitary sewage into Dick's Creek will not be permitted for a period in excess of 24 hours.

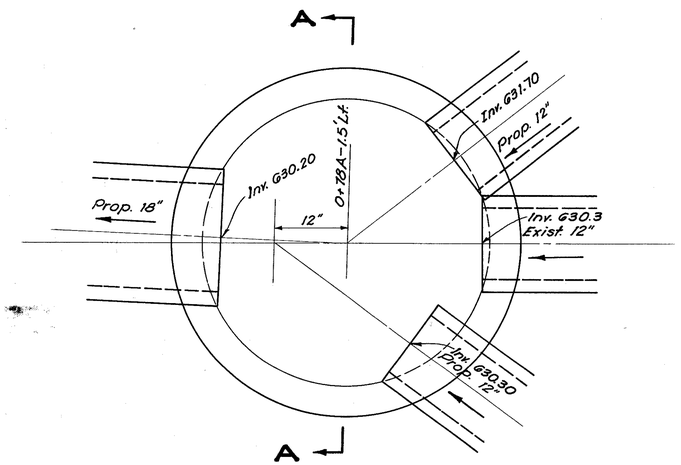
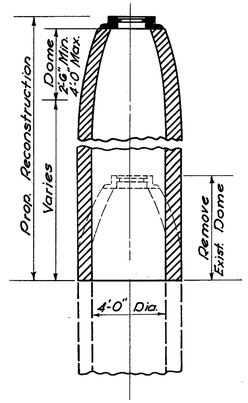
Scale: 1" = 10'



PLAN
SHOWING PIPES ENTERING AND LEAVING MANHOLE @ 0+78 A – 1.5' LT.
Scale: 1"=1'-0"

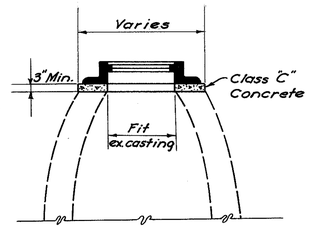
METHOD A



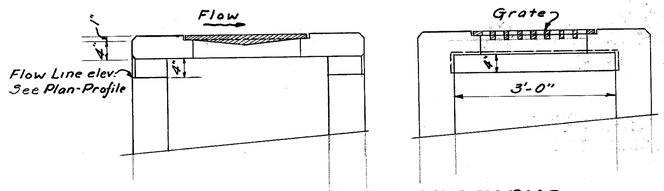
METHOD A is to be used where the existing casting is to be raised an amount exceeding 12" or lowered more than 6".

METHOD B is to be used where the existing casting is to be raised an amount less than 12" or lowered less than 6". Sufficient brick or concrete shall be removed to permit a minimum thickness of concrete of 3".

METHOD B



MANHOLE ADJUSTED TO GRADE
No Scale



Modification involves size & location of side openings. Reinforcing Steel, Grate, & all other dimensions same as for Std. 2-3 C.B.

Toe of Slope
621.2±
621.3±

Grade toe of slope to elevation 0.5± above elevations shown. After all seeding and mulching has been completed on the side slopes & the grass has taken root, the final 0.5' shall be removed from the bottom of the enclosed area. No topsoil, seed, or sod is to be placed on the bottom of the enclosed area. The intent is to have a clean gravel surface free of top-soil or grass on the bottom of the enclosed area.

Due care shall be exercised while grading the last 0.5' that the damage to the seeded area is kept to a minimum. After all grading has been completed any damaged area shall be restored.

LOADING: Standard lane loading as per State of Ohio Design Specifications for Highway Structures October 1, 1951 with revisions dated July 15, 1952 and April 1, 1954.
CF = 400
VERTICAL CLEARANCE: 22'-6" minimum required.

NOTES

- Symbol denotes drill hole
  See Sheet No. 11 for test boring data
  Foundation design and foundation quantities are based on a study of test borings and soil samplings made at the site. This sounding information may be inspected in the Office of the Bureau of Bridges in Columbus or in an abridged form in the Division office, but the State assumes no responsibility for the accuracy thereof.
  The minimum construction clearances over the railroad are: 19'-0" Vertical and 8'-0" horizontal.

See Sheet No. 41 for trees and existing structures.

NOTE: Materials in approach slabs are not included in the above estimated quantities.

GENERAL NOTES

DECK PLACING PROCEDURE: Deck slab shall be placed in sections between transverse construction joints, in the numerical order and in the direction indicated on the drawings.
WELDING: Welding shall be Class "A" unless otherwise shown on plans. Any weld shown as field weld may be welded in the shop at the option of the contractor. Class "B" welds are shown with the letter "B" in the V-tail of the weld symbol.
BEARING PILES: Piles for pier number four shall be driven to firm contact with rock. This shall be considered as attained when the capacity according to the formula in Sec. S-18.05 is at least 45 tons per pile if a 7000 lb steam hammer is used or 35 tons per pile if a steam hammer or drop hammer of 15000 lb or greater energy is used and if the length of penetration is approximately equal to the depth to rock according to the bridge foundation investigation report. If the energy rating of the hammer is between these values, the required formula capacity shall be determined by interpolation. The design load is 24 tons per pile. Piles for pier number five shall be driven to a minimum bearing capacity of 40 tons and preferably to firm contact with rock.
PAINT: One additional field coat of paint, of the same kind, as the shop coat, shall be put on the structural steel in the span over the Railroad track, with the exception of the steel in contact with concrete.
FOOTINGS: Footings of rear abutment and of piers Nos. 1, 2 & 3 shall extend a minimum of 3' into solid rock or to the elevation shown, whichever is lower.
EXCAVATION: Roadway embankment at north abutment shall be placed and compacted to the elevation at which the embankment slope intersects the face of the abutment. Excavation shall then be made for abutment footings. Quantities for excavation includes removal of fill material between the above described elevation and bottom of abutment footings.

REMOVAL OF EXISTING STRUCTURES: That portion of the old abandoned aqueduct structure (see sheet No. 161) that interferes with the relocated Dick's Creek channel shall be removed to the proposed grade of the channel. Waste masonry may be disposed of as bank protection as directed by the Engineer. Cost of this removal shall be included in the lump sum price bid Item S-24.
SURFACE FINISH OF CONCRETE: Curb faces and fascias of deck shall receive a rubbed surface finish. All other exposed surfaces shall be governed by the provisions of Item S-1.

GRAVEL: If used as a coarse aggregate, shall be according to Sec. M-3.93 instead of M-3.91 for Class "C" concrete in the superstructure. Gravel meeting the requirements of Sec. M-3.93 may also be used for other concrete in this structure.
TRAFFIC: Adequate protection and maintenance of railway traffic shall be provided at all times.
EMBANKMENT: The approach embankment to the North abutment to be placed and brought to the planned subgrade elevation, from the forward bridge limit to about station 592+00 (200 ft.) during the initial stage of work at this structure. The above shall be completed before any work will be permitted for the construction of Pier No. 5. Provisions shall be made for, and periodic checks made of the elevation of the approach embankment at the North abutment immediately following the placement of the embankment to the planned subgrade elevation. Such periodic observations shall be continued until the existence, degree and nature of any subsidence due to the consolidation of the subsoil has been established.
ADDITIONAL NOTES: For additional notes see sheet No. 172

NOTES:
1. Soil auger borings and rod penetration tests were made between Dec. 22, 1954 & Jan. 25, 1955 with a 3" continuous flight auger.

2. The structure site is generally located on the South edge of a Deep Stage Stream Valley. Overburden at the rear abutment and rear pier consists of residual soil and fragmental rock. Glacial outwash occurs at the location of the remaining piers and the forward abutment. The outwash is composed of somewhat granular material with occasional limestone floaters, for this reason it is believed that the rod penetration tests are the more accurate inasmuch as they penetrated to a lower elevation at some test locations. Refusal of the soil auger borings at a higher elevation at the same test location probably is caused by encounter with floaters.

NOTE: Where no cambering is required the beams shall be so fabricated that any curved beams will be placed with the convex flange up.

BEAM SPLICE WELDING PROCEDURE

1 - At pier #3 weld bottom flange splice plates to beams spanning between piers #3 & #4.
2 - Raise ends of beams @ pier #2, 2 3/16".
3 - Weld beam flanges & webs @ pier #3.
4 - Weld top flange splice plates @ pier #3 (both sides of joint.)
5 - Complete welding of bottom flange splice plates @ pier #3.
6 - Lower end of beams @ pier #2.
7 - Repeat steps 1 thru 5 @ piers #2 & #4 by raising ends of beams, 1 15/16" @ pier #1 & 1 15/16" @ pier #5.
8 - Lower ends of beams @ piers #1 & #5.
9 - Repeat steps 1 thru 5 @ pier #1 & #5 by raising ends of beams, 1 1/16" @ south abutment & 1 1/8" @ north abutment.
10 - Lower ends of beams @ both abutments.

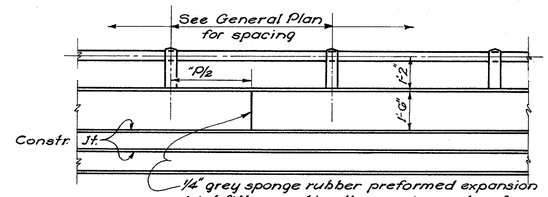
Weights given are for rocker or bolster complete (including sheet lead)



1/4" grey sponge rubber preformed expansion joint filler meeting the requirements of Sec. M-10.02, Type 1, space two panel lengths apart. (Included with Item S-14 for payment)

TREATMENT OF PARAPET AND FASCIA

Scale: 3/8" = 1'-0"

NOTES

REFERENCE: shall be made to Suppl. Spec. No. S-114 Aluminum for Bridge Railing.

ANCHOR BARS shall be 3/4" ϕ aluminum bars, threaded and fitted with aluminum nuts at both ends, and embedded 1'-0"± into concrete. Care shall be exercised in placing the anchor bars to insure correct horizontal alignment of the railing.

I-9	50	Lin.Ft.	Stone Underdrain (French drain)	25			25		
I-10	800	Sq.Yds.	Type "A" Riprap, 6" concrete slab						800

Note:
Materials in approach slabs are not included in the above estimated quantities.

GENERAL NOTES

DECK PLACING PROCEDURE: Deck slab shall be placed in sections between transverse construction joints, in the numerical order and in the direction indicated on the drawings.

WELDING: Welding shall be Class A unless otherwise shown on plans. Any weld shown as field weld may be welded in the shop at the option of the contractor. Class B welds are shown with the letter "B" in the V-tail of the weld symbol.

EXCAVATION: Roadway embankment at abutments shall be placed and compacted to the bridge seat elevation. Excavation shall then be made for the abutment footings. Quantities for excavation includes removal of fill material between the above described elevation and bottom of the abutment footings.

SURFACE FINISH OF CONCRETE: Curb faces, fascias of deck and exposed surfaces of piers, abutments, and wing walls shall receive a rubbed surface finish. All other exposed surfaces shall be governed by the provisions of Item S-1.

GRAVEL: If used as a coarse aggregate, shall be according to Sec. M-3.93 instead of M-3.91 for Class C concrete in the superstructure. Gravel meeting the requirements of Sec. M-3.93 may also be used for other concrete in this structure.

TRAFFIC: Adequate protection and maintenance of two-way traffic on existing or relocated State Route No. 73 shall be provided at all times.

ADDITIONAL NOTES: For additional notes, see Sheet No. 191

EMBANKMENT: Approximately 200 ft. of approach embankment at each end of the bridge to be placed and brought to the planned subgrade elevation during the initial stage of work at this structure. The above shall be completed before any work will be permitted on the construction of piers. Provisions shall be made for, and periodic checks made of the elevation of the approach embankments immediately following the placement of the embankment to the planned subgrade elevation. Such periodic observations shall be continued until the existence, degree and nature of any subsidence due to the consolidation of the subsoil has been established.

Scale: 1/2" = 1'-0"

DEFLECTION & CAMBER

Location	B-1 End Span	B-1 Middle Span	B-2 End Span	B-2 Middle Span
Deflection due to weight of steel	0"	5/32"	0"	5/32"
Deflection due to remaining dead load	-3/32"	1 3/16"	-15/32"	11/16"
Sum of deflections	-3/32"	1 1/32"	-15/32"	27/32"
Required shop camber	0"	1 3/8"	0"	1"

Note: No cambering of beams is required for the end spans, but the beams shall be so fabricated that any curved beam will be placed with the convex flange down. For center spans camber as shown in table.

BEAM SPLICE WELDING PROCEDURE

1. At first Pier, weld bottom flange splice plate to beam on middle span side of Joint only.
2. Raise end of beam at first abutment 7/8".
3. Weld beam flanges and web at first pier.
4. Weld top flange splice plate at first pier (both sides of Joint.)
5. Complete welding of bottom flange splice plate at first pier.
6. Repeat steps 1 to 5 inclusive at second pier by raising at second abutment.
7. Lower ends of beams at both abutments.

REFUSAL

NOTE: STA. 569+70 TO STA. 585+60
SLOPE OF THE GROUND SURFACE ON CROSS SECTIONS IN THIS AREA VARIES FROM NEARLY FLAT TO VERY GENTLE. BEDROCK CONDITIONS AS DISCLOSED BY THE CORE DRILL HOLES AT STA 574+00 & STA 581+00 ARE CONSIDERED REPRESENTATIVE OF THE ENTIRE CUT AREA. EXTENSIVE ELECTRICAL RESISTIVITY TESTS AND THE CORE DRILL HOLES INDICATE THE SOIL OVERBURDEN TO BE COMPARATIVELY UNIFORM IN THICKNESS, AND TO RANGE IN THICKNESS FROM APPROXIMATELY 3 TO 10 FEET.
