Hazardous Waste Screening Report

Dear Mr. Flynn:

Enclosed please find two (2) copies of the above referenced report for distribution and review. This report incorporates those comments received from ODOT-BES per their October 23, 1992, memo. By copy of this letter we are also forwarding two (2) additional copies of the document to Mr. Ted Stitt of the Bureau of Environmental Services. Should additional copies be desired, please advise.

We are presently initiating Phase I ESA activities for those parcels identified in this Screening for further evaluation.

DISCLAIMER

This report has been prepared for the exclusive use of The Limited Corporation and ODOT in connection with the Justification Report for a improved access on I-270 in the Morse Road area in Mifflin Township in Franklin County, Ohio. The assessment is limited to the specific study area delineated in this document.

The conclusions provided by **ms consultants, inc.** are based solely on the scope of services conducted and the sources of information referenced in this report. Additional findings, future operations or information made available to **ms consultants, inc.** subsequent to the publication of this document may modify and/or negate some or all of the findings presented herein. Any additional information that becomes available concerning this site should be provided to **ms consultants, inc.** so that our conclusions and recommendations may be reviewed and modified as necessary.

This report is not an audit for regulatory compliance or a detailed condition survey for the presence of asbestos, lead paint, PCBs, radon and other naturally occurring, non-disposed materials or disposed materials.

Our conclusions regarding the site are based on observations of existing site conditions, our interpretation of site history and site usage information, visual walkover assessment, and examination of local, State and Federal regulatory databases as defined in the ODOT Environmental Site Assessment Guidelines. The findings of this study must be qualified by the fact that no quantitative or chemical specific sampling of soil, surface water or groundwater was conducted as a part of this study. Therefore, conclusions regarding the condition of the site do not represent a warrant that all areas within the project area are of the same quality as those observed or as may be inferred from observable site conditions and readily-available site history.

SECTION I

INTRODUCTION

Project History

The northeastern portion of the City of Columbus and the County of Franklin is under-going extensive development and growth. This anticipated growth is the result of several factors. The Columbus Metropolitan area has continued to grow in both population and employment. In the last decade Columbus was the only major metropolitan area in Ohio growing in population. The population increased nearly 10% from 1980 to 1990 while employment in the last five years grew nearly 15%. The northeastern sector is one of the last segments of undeveloped land along the northern crescent of I-270 extending from Dublin to Gahanna. In addition, the scheduled completion of I-670 linking the Columbus Central Business District (CBD) to the northeastern sector will greatly lessen travel time to the CBD and is expected to generate office, retail and warehousing facilities and employment opportunities along the I-670 corridor.

These factors have led numerous developers to plan and begin construction on office buildings, distribution centers, retail goods and services facilities, and residential housing. Among these are The Limited which is planning a mixed use development in excess of 784 acres at the southwest corner of I-270 & Morse Road. Ross Park, a 860,000-square-foot office and research facility located between I-270 and Stelzer Road north of McCutcheon Road is under phased construction. Over 300 acres of office, warehousing and retail services are planned in the block of land bounded by I-670, Cassady, Agler and Stelzer which are referred to as the I-670 corridor developments. Residential developments include Benchmark, nearly 700 units planned near the intersection of Stelzer & Agler, and over 3500 units planned east of I-270 between Morse Road and SR 161 in New Albany. These developments are expected to impact both the interstate and arterial network system. Figure I-1 illustrates the total study area

GENERAL LOCATION MAP

Prepared by
ms consultants, inc.
Columbus, Ohio

encompassed by this environmental site assessment, where improvements to the I-270 mainline and arterial roadways are anticipated. Some of these improvements may require additional right-of-way to be purchased.

In addition, an Interchange Justification Study has recently been completed to determine the feasibility of, and justify the need for, improved access along I-270 between I-670/US 62 and SR 161. Various interchange locations and configurations were identified in that study that, if implemented, would require the acquisition of additional right-of-way. The proposed interchange configurations requiring additional right-of-way not encompassed by the anticipated I-270 mainline and arterial improvements are illustrated in Figures I-2 and I-3.

Purpose and Scope

The Environmental Site Assessment can be segregated into the following activities:

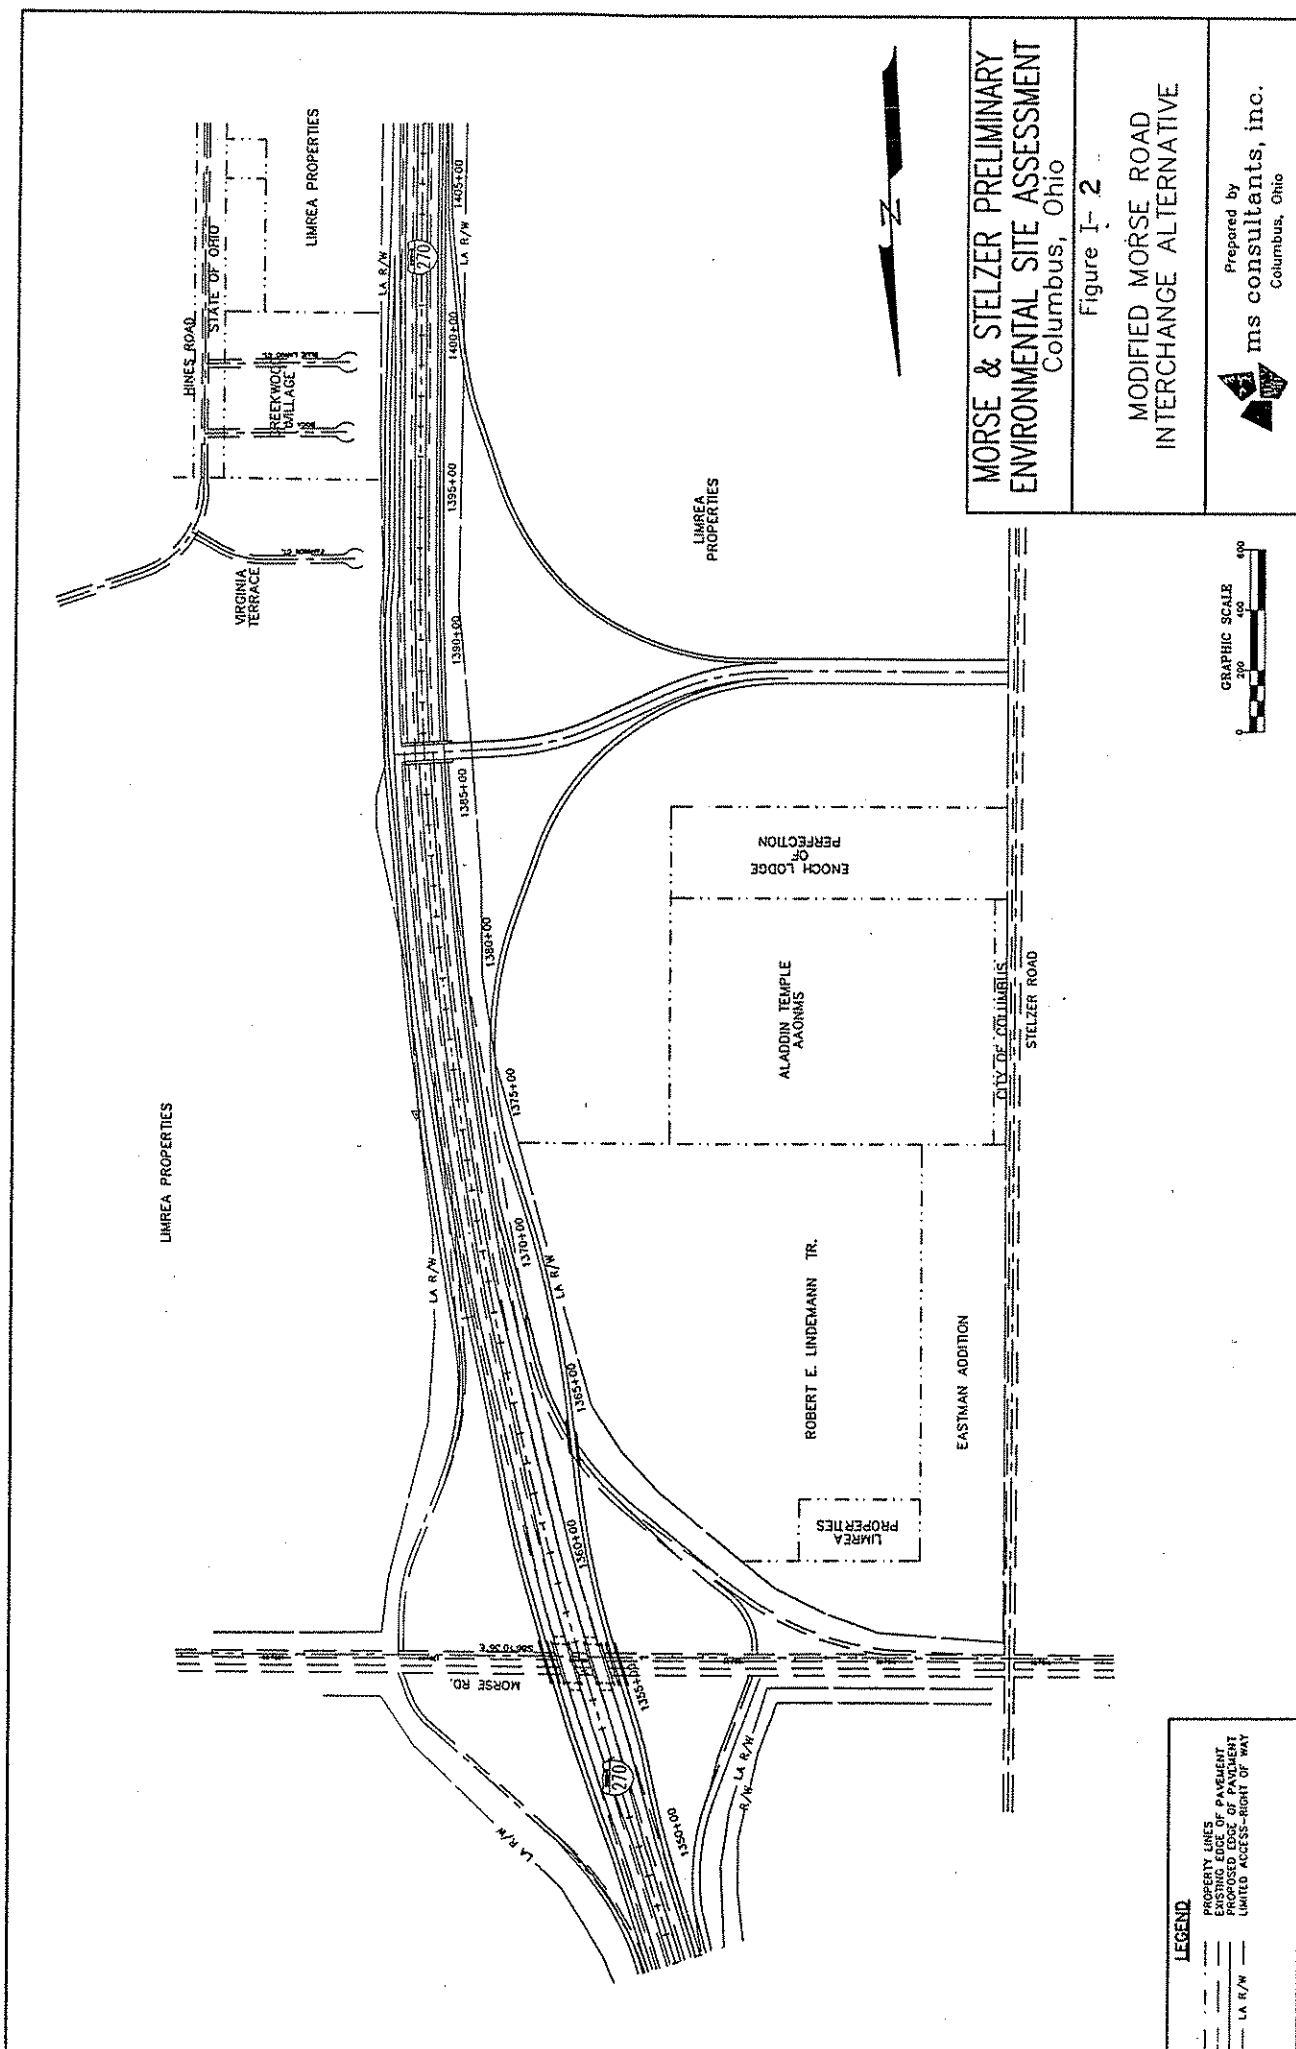

- Preliminary Environmental Site Assessment (Screening)

- Phase I Environmental Site Assessment

- Phase II Environmental Site Assessment

The Preliminary Environmental Site Assessment represents a screening process for the study area. The purpose of this phase is to identify parcels within the project limits which, by virtue of past or present land use, visual evidence, or proximity to areas known or suspected to be contaminated, may be reasonably assumed to be free of contamination by hazardous substances.

For those properties not cleared by the preliminary screening, a more comprehensive investigation of the parcel is conducted. The Phase I Environmental Assessment examines the site's geographical/geological setting and specific property records, consists of a second site visit wherein interviews of property owners and non-quantitative testing using portable instrumentation, and develops recommendations pertaining to the probability of contamination and the need for a sampling and testing program.

The Phase II Environmental Site Assessment verifies the findings of the Phase I investigation and attempts to characterize the type of wastes present. If hazardous substances are found in Phase II, an estimate of the extent of contamination with recommendations for further, extensive quantitative testing or other appropriate actions is warranted.

Phase II, if required, would include a detailed sampling and testing plan, monitoring of soil, groundwater and/or air, analytical services, re-evaluation of the site, and present remediation mitigation alternatives available.

The Preliminary Screening evaluation for the project involves the following for the study area:

1. Review of Public Records - A search of local, State, and Federal public records to identify past and present land use activities which may have resulted in contamination of the property.
2. Review of State and Federal Databases - Contact of Federal, State, and local regulatory agencies regarding the location of known sites, spills or generators of any regulated/hazardous substances on or near the property.
3. Private Records - Various private records, including insurance maps, atlases, City directories, newspaper and magazine archives will be consulted as appropriate to further define historical property usage.
4. Interviews - Interviews with area residents, current and former property owners, tenants, employees and Federal/State/local officials regarding current and past site activities, as appropriate will be conducted.
5. Preliminary Field Inspection - A walkover survey of the project area and selected adjacent properties for location of storage areas, surface contamination, drums, lagoons, above and/or underground storage tanks, depressions, and structures on properties proposed for acquisition. The

level of detail for each property to be determined by the findings of the reviews, records, questionnaires and interviews indicated above.

6. Areas of Concern - Based upon the findings of the public records searches, agency contacts, interviews, archive search and field inspections, those properties suspected of contamination will be recommended for a Phase I assessment. Other properties, based upon the findings will be considered reasonably free of contamination.
7. Summary - A summary of the findings, conclusions drawn, and recommendations made for this phase of assessment.

Appropriate appendices will document relevant correspondence with Federal, State, and local agencies, as well as any interviews with local officials, property owners and tenants, within the assessment study area.

SECTION II

LOCAL PUBLIC RECORDS SEARCH

The objective of the local public records search is to solicit all of the available information relative to the subject property and adjacent parcels. Information obtained from this search is instrumental in determining past and present land use activities which may have resulted in contamination of the properties or abutting parcels.

A significant level of effort is generally necessary to acquire review and interpret specific local public records, which can include a deed review, building permits, demolition permits, fire department records, tax maps, USGS topographic maps, geologic information, water well records, and accident reports resulting in a spill or release of hazardous substances. Consequently, a local public record search was not performed as part of this Preliminary Environmental Site Assessment. As outlined in the latest ODOT guidelines, activities relating to specific property records shall be performed during Phase I Environmental Site Assessment activities.

SECTION III

FEDERAL - STATE PUBLIC RECORDS SEARCH

Introduction

As part of the public records search, Federal and State regulatory agencies were contacted regarding State/Federal databases, reports, investigations or other records available for the subject property as well as surrounding properties which may affect the environmental quality of the project area. Information on compliance history, hazardous waste generation sites, dumps, spills, releases, Superfund or potential Superfund, sites, underground storage tanks or other relevant information regarding these properties. Federal and State regulatory agencies contacted and/or supplying information include the following:

- ♦ United States Environmental Protection Agency
Region V - Chicago, Illinois
Div. of Hazardous/Solid Waste-CERCLA Section
Div. of Hazardous/Solid Waste-RCRA Section
- ♦ State of Ohio Environmental Protection Agency
Div. of Air Pollution Control
Div. of Corrective Action
Div. of Emergency Response & Remediation
Div. of Solid/Hazardous Waste Management
Div. of Water Pollution Control
Div. of Ground Water
Div. of Water Quality Monitoring & Assessment
- ♦ State of Ohio Environmental Protection Agency
Central District Office
Div. of Air Pollution Control
Div. of Corrective Action
Div. of Emergency Response & Remediation
Div. of Solid/Hazardous Waste Management
Div. of Water Pollution Control
Div. of Ground Water
Div. of Water Quality Monitoring & Assessment

- ♦ State of Ohio Dept. of Commerce - State Fire Marshal
Bur. of Underground Storage Tank Regulations
Bur. of Inspections
Hazardous Materials Division
- ♦ State of Ohio Department of Transportation
District No. 4 Office
Bur. of Aerial Engineering
Bur. of Environmental Services
- ♦ State of Ohio Department of Natural Resources
Div. of Soil & Water Conservation
Div. of Geological Survey
Div. of Soil Reclamation

Documentation of correspondence with various State regulatory agencies/Federal agencies may be found in Appendices B and C, respectively. All relevant archives, databases, records, enforcement history, public files, reports and other information examined are herein discussed.

United States Environmental Protection Agency

The United States Environmental Protection Agency (U.S. EPA) was created in 1970 as the Federal regulatory agency concerning environmental contamination of air, water, and land. The U. S. EPA maintains ten (10) regional offices as well as its headquarters in Washington, D. C. U. S. EPA's Region V Offices, located in Chicago, Illinois, maintains U. S. EPA records for the State of Ohio. These public records are maintained in accordance with the Federal laws listed below:

- ♦ Resource Conservation and Recovery Act (RCRA)
- ♦ Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) - also known as "Superfund"
- ♦ Superfund Amendment and Reauthorization Act (SARA)
- ♦ Underground Storage Tank Regulations (USTR)
- ♦ Clean Water Act (CWA)
- ♦ Clean Air Act (CAA)
- ♦ Toxic Substances and Control Act (TSCA)

- ♦ National Environmental Policy Act (NEPA)
- ♦ Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)
- ♦ Safe Drinking Water Act (SDWA)
- ♦ Solid Waste Disposal Act (SWDA)
- ♦ Emergency Planning and Community Right-To-Know Act (EPCRA-SARA Title III)

From these Federal laws, U. S. EPA maintains databases of facilities which use, store, transport, generate or dispose of hazardous materials. Specific Federal databases examined for the project study area include:

- ♦ National Priorities List (NPL)
- ♦ Facilities Index System (FINDS)
- ♦ Comprehensive Environmental Response Compensation and Liability Index System (CERCLIS)
- ♦ Hazardous Waste Data Management Information System (HWDMS)
- ♦ Resource Conservation and Recovery Act (RCRA) Notification System
- ♦ National Spill Reports System (NSRS)

National Priorities List

The National Priorities List (NPL), otherwise known as Superfund is U. S. EPA's database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under CERCLA (Superfund) program. The NPL is produced monthly and ranks these sites in order of importance for remedial action. A site to be included on the NPL, must either meet or surpass a predetermined hazard ranking systems (HRS) score, or be chosen as a State's top-priority site, or meet all three of the following criteria: 1) The U. S. Dept. of Health and Human Services issues a health advisory recommending that people be removed from the site to avoid exposure; 2) U. S. EPA determines that the site represents a significant threat; and 3) U. S. EPA determines that remedial action is more cost effective than removal action.

The August, 1990, National Priorities List (NPL) was examined for sites in Franklin County, Ohio. None of the NPL listed sites are located within Franklin County. The closest listed NPL site(s) is the Bowers Landfill (Pickaway County). This NPL listed site is located over thirty (30) miles away from the study area. Due to physical distance, predominant wind direction, ground and surface water flow, contamination from this site affecting proposed projects within the study area is unlikely.

Comprehensive Environmental Response Compensation and Liability Information System

Superfund, the popular name for the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), was enacted to address "abandoned" hazardous waste sites. Under Section 103 (c) of CERCLA, a one-time reporting provision, required every person who owned or operated a facility where hazardous substances had been stored or disposed and which were not permitted under the Resource Conservation and Recovery Act (RCRA) to notify U. S. EPA of the existence of the facility by June 9, 1981. U. S. EPA used this information to create an inventory of potential problem sites. This list evolved into the Emergency Remedial Response Inventory System (ERRIS), and is currently known as the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS). Federal and State regulatory agencies periodically add sites to the CERCLIS listing as more information on unknown sites becomes available.

The January, 1991, CERCLIS databases were examined for sites in Franklin County, Ohio. A total of forty (40) such sites within Franklin County exists, with one (1) site listed in Mifflin Township, one (1) site listed in Blendon Township and two (2) sites listed in Jefferson Township. A summary of CERCLIS listed sites in proximity of the study area is given in Table III-1. Of these facilities, the closest CERCLIS listed sites are OHD041082025, identified as Harrison Enterprises, Inc., OHD980616064, identified as the Bedford Site #1, and OHD980509939, identified as the Bedford Site #2. The Harrison Enterprises, Inc. site is listed as a medium priority for U. S. EPA, as is the Bedford #2 site. The Bedford #1 site, which is a closed landfill, has a zero priority, which means that

ECOL-Bedford Site #2 470 Morrison Road Columbus, Ohio 43230	OHD980509939	MED	Located 4.5+ miles southeast of the project area

NOTES:

(1) Listing current as of July 31, 1991.

there is no potential for a release of hazardous waste from this suspected site. These sites are located a sufficient distance from the study area to have a negligible impact on any proposed improvements.

Hazardous Waste Notifiers List

The Hazardous Waste Notifiers List is a listing of those facilities managed by the U. S. EPA under the Resource Conservation and Recover Act (RCRA), which includes all facilities in operation which store, use, generate, transport or dispose of regulated and/or hazardous substances. Ohio EPA's Division of Solid and Hazardous Waste Management (DSHWM) and U. S. EPA's Region V - Chicago maintains these lists by State and County.

The list of entities which hold U. S. EPA RCRA permit numbers in Franklin County, Ohio, were examined by this office.

A list of entities which hold U. S. EPA permit numbers within postal areas 43219 (Mifflin Township), 43081 and 43230 (Mifflin, Blendon and Jefferson Townships) of Franklin County, Ohio, were examined. These facilities are summarized in Table III-2 and illustrated in Figure III-1. From the same one hundred and seventy-two facilities within these postal areas, ten (10) entities are within or immediately adjacent to the assessment study area. One (1) facility, identified as OHD987009347, the Northeast Career Center, is along Stelzer Road immediately adjacent to the western terminus of the Modified Morse Road Interchange and within 1/2-mile and northwest of the Stelzer Road Interchange location. Seven (7) entities are located along Morse Road and are identified as follows:

OHD980792790:	Shell Service Station
OHD082741968:	Chemlawn Corporation
OHD986966976:	City of Columbus, Hap Cremean Water Plant
OHD987005774:	EMRO Station 1193
OHD079422200:	Jerry Greer Airstream
OHD982643058:	Hap Cremean Water Plant
OHD065981532:	Mid-Ohio Imported Car Company, Inc.

Two (2) entities along Sunbury Road at SR 161 are identified as follows:

OHD987009602	Firestone
OHD987013620	B. P. Oil

Notes: (1) U.S. EPA CLASSIFICATION CODES ARE AS FOLLOWS:

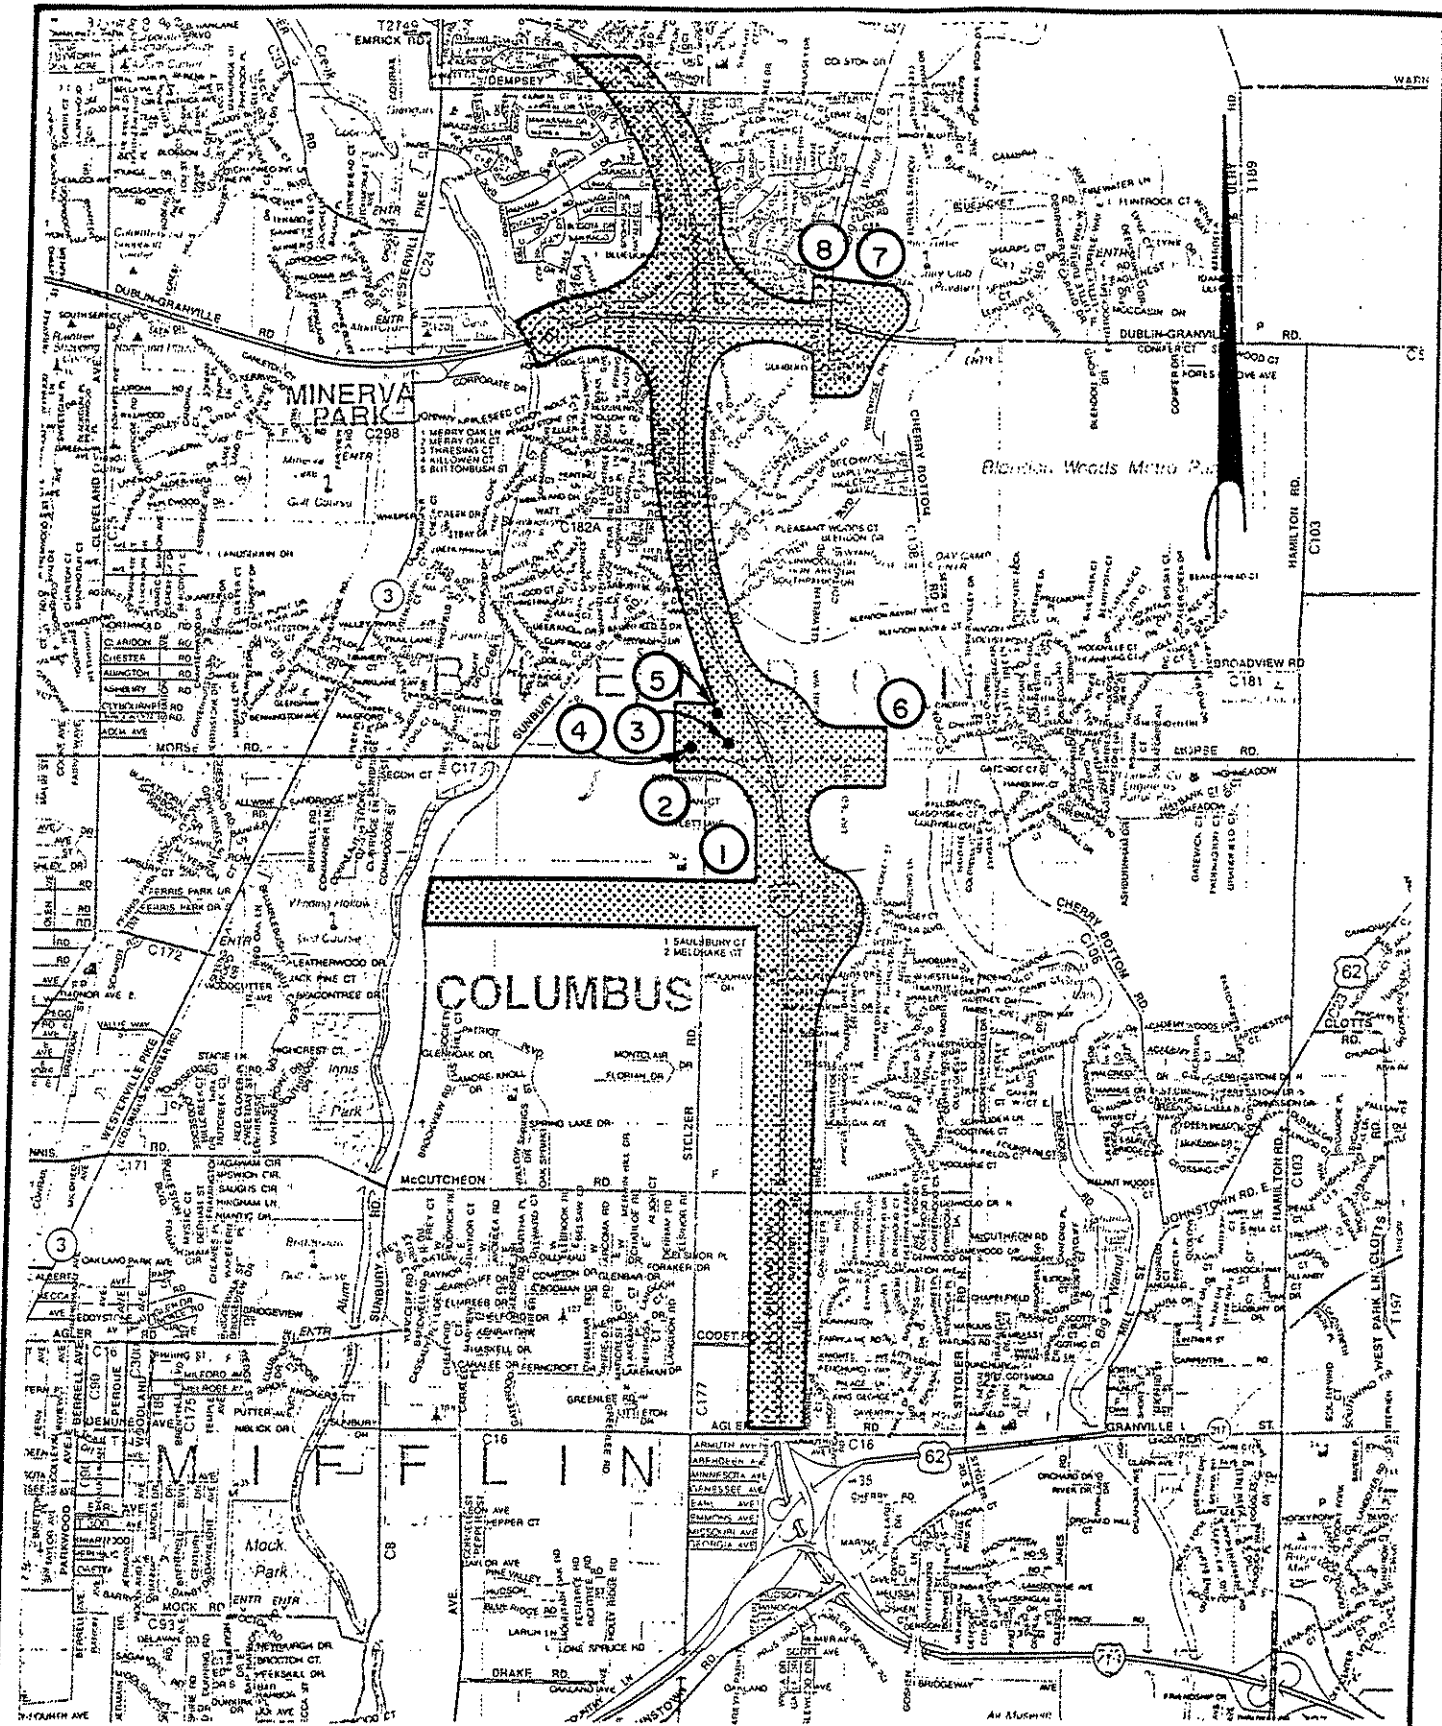

- STS - Non Regulated Installation Status Indicator: 1 - Non Handler (Protective Filers, Duplicate Filers)
 NNT : N - Non Notifier, S - Superfund Site Generating Waste Through Cleanup
 GEN - LQG - Generators of at least 1,000 kg/month of non-acutely hazardous waste or 1.0 kg/month of acutely hazardous waste.
 SGG - Generators of 100 kg/month to 1,000 kg/month of non-acutely hazardous waste.
 CEG - Generators of less than 100 kg/month of non-acutely hazardous waste.
 TRS - Regulated waste transporter WAF - Waste as Fuel Facility
 TSD - Treatment, Storage and/or Disposal Facility. OSF - Off- specification used fuel oil marketer or burner
 UIC - Underground Injection Control Facility SOF - Specification used fuel oil marketer or on-site burner
 Part A Appln - Part A application filed (date)
 PAS - Part A Application Status (TSD Facility status indicator) 1 - Existing, 2 - New, 3 - Closed.
 NON - Non regulated Part A Status Indicator: A - Asbestos, B - Drum Recycling, C - Elementary Neutralization,
 D - Elementary Neutralization in & Wastewater Treatment Unit, E - Exempted Waste, F - Non- Hazardous Waste,
 G - Pickle Liquor, H - Protective Filing, J - Raw Materials, K - Recycling, M - Small Quantity Generator,
 N - Storage fewer than 90 days P - Transfer Facility Q - Transporter, R - Wastewater
 S - Non-Existing Facility (Never Built), Z - Multiple Categories, 8 - Closure Candidate, 9 - Withdrawal Candidate
 PER - Permit Status: 0 - Other, 1 - Interim Status/Permit Candidate, 2 - RCRA Permit Issued, 3 - Permit-By-Rule,
 4 - Part A Withdrawal candidate, 5 - Parts A & B withdrawal, never met interim status criteria,
 6 - Part A & B withdrawal interim status not terminated, 7 - Part A withdrawn, interim status terminated,
 8 - ISCL or Compl Order in lieu of interim status, 9 - New Facility, Part B application received,
 A - RCRA Permit Denied

Ohio Environmental Protection Agency

The State of Ohio Environmental Protection Agency (Ohio EPA) was created in 1973 as the State watchdog agency concerning environmental contamination of air, water and land at the State level. The Ohio EPA maintains five (5) district offices as well as a central district office. Ohio EPA's Central District Office (Ohio EPA-CDO) maintains records for Franklin County, Ohio. The Ohio EPA maintains these records under authority of the Ohio Revised Code (ORC) enacted to meet or exceed the Federal laws previously discussed. From these State (and Federal) laws, Ohio EPA maintains files and databases of facilities that are known or known to have stored, generated, transported or disposed of regulated or hazardous materials. Specific databases requested and/or examined for the subject property include:

- ♦ Remedial Response Section Unregulated Sites Master List (Alpha by County)
- ♦ Hazardous Waste Notifiers Master List (Alpha by County)
- ♦ Community Right-to-Know (SARA Title 313-Form R)
- ♦ Emergency/Response On-Line System, Pollution Incidents (EROPIK)

These databases were utilized to establish a listing of facilities for which specific public files can be requested for review. Available files include RCRA, solid waste, emergency response, industrial wastewater, pretreatment, enforcement, groundwater, air surface water. Specific divisions maintaining files include the following:

- ♦ Div. of Solid and Hazardous Waste Management (DSHWM)
- ♦ Div. of Emergency and Remedial Response (DERR)
- ♦ Div. of Water Pollution Control (DWPC)
- ♦ Div. of Groundwater
- ♦ Div. of Air Pollution Control (DAPC)
- ♦ Div. of Water Quality Planning & Assessment (DWQPA)

Unregulated Sites Master List

The Unregulated Sites Master List is a listing of sites by county and is maintained by Ohio EPA's Division of Emergency and Remedial Response, Remedial Response

Section (DERR-RRS). This list represents the State version and expansion of U. S. EPA's CERCLIS Database. The 1991 Ohio EPA Unregulated Sites Master List was examined and Table III-3 represents the portion of this list within Franklin County. Locations of these sites in relation to the study area are illustrated in Figure III-2. Note that the listing adds one (1) site to the CERCLIS listing presented in Table III-1. The site added is not within the study area, but is within Mifflin Township.

Ohio EPA assigns a secondary priority rating to most of these listed sites. This rating is used to ask U. S. EPA to assign a contracted Field Investigation Team (FIT) to perform follow-up site inspections. The FIT priority rankings include: H=High, M=Medium, L=Low, 0=No further action and "Yes" for site inspection. Ohio EPA assigns each site to one of these categories based on the site, likelihood to score near or above the National Priority List (NPL) cutoff point.

None of these facilities is located within the study area, with four (4) sites determined to be located in proximity of the study area. The entities are identified as:

Harrison Enterprises, Inc.
Aratex Services, Inc.
ECOL (aka) Bedford Site #1
ECOL (aka) Bedford Site #2

Emergency Response Online System (EROPIK)

The Ohio EPA's Division of Emergency and Remedial Response-Emergency Response Section (DERR-ERS), maintains a listing of all spills or other releases from fires, accidents, etc. by Township and City for all Counties in the State since 1978. This system printout was requested for Mifflin and Blendon Townships of Franklin County, Ohio.

The EROPIK printouts for Mifflin and Blendon Townships were examined by this office and are summarized in Table III-4. None of the spills or releases on this EROPIK listing appear to be within the project area. Known EROPIK listed locations are shown in Figure III-3. The closest EROPIK spills appears to be over one-half mile east of the study area. From observations of the quantity of materials released, amount recovered, agency action and materials involved, these spills do not appear to have a potential for significant impact upon properties within the study area.

State Fire Marshal's Office

The State Fire Marshal's Office is charged with the registration, inspection and closure records for underground storage tanks (USTs) within the State of Ohio. Visual observations of property adjacent to the project area have indicated the presence of land use activities suspect of utilizing USTs. Suspect properties were determined through a review of aerial photographs, local records and other sources all of which are presented in elsewhere in this report. Locations of other businesses suspect of utilizing USTs are given in Figure III-4, which also indicates the search area for which UST information was requested.

The State Fire Marshal's Office (SFMO) began to register UST owners in 1986. Information contained in the UST registration summaries include facility location, use status, age, construction materials, protection mechanisms and type of material contained for each underground storage tank that is registered. A second round of UST registrations took place in 1989. A summary of facilities for which registrations are available are summarized in Table III-5. Note that if a facility ceased operations prior to 1986, then the facility is likely not to be registered with this agency. Correspondence with the State Fire Marshal's Office, Bureau of Underground Storage Tank Regulations (OSFM-BUSTR), indicated that their agency has jurisdiction for petroleum USTs only; that is, if a UST holds something regulated by Ohio EPA (under RCRA or CERCLA), no records would be available.

In addition to registration, records of UST closure, removal, releases and enforcement were requested from this agency for properties within or adjacent to the assessment study area. The Ohio State Fire Marshal's Bureau of Underground Storage Tank Regulations (BUSTR) maintains a computerized database listing of reported underground storage tank release incidents. This database dates to January 1, 1987, and is updated on a continual basis. This listing represents all reported releases and UST closures which are filed with the Ohio State Fire Marshal's Office. This database, dated December 30, 1991, was examined for sites within and adjacent to the study area in Mifflin and Blendon Townships of Franklin County, Ohio. Entities within postal zip code areas 43219, 43081 and 43230 were scrutinized and are summarized in Table III-6.

MORSE & STELZER PRELIMINARY
ENVIRONMENTAL SITE ASSESSMENT
Columbus, Ohio

Figure III-4
STATE FIRE MARSHAL'S
SUMMARY OF REGISTERED USTS

Prepared by
ms consultants, inc.
Columbus, Ohio

Geographical locations are presented in Figure III-5. Examination of this database indicated that the closest reported UST releases are as follows:

- ♦ Colonial Quick Stop, 4038 Morse Road (12/24/91)
- ♦ Dairy Mart (Formerly Stop-N-Go) 4242 Morse Road (11/30/89)

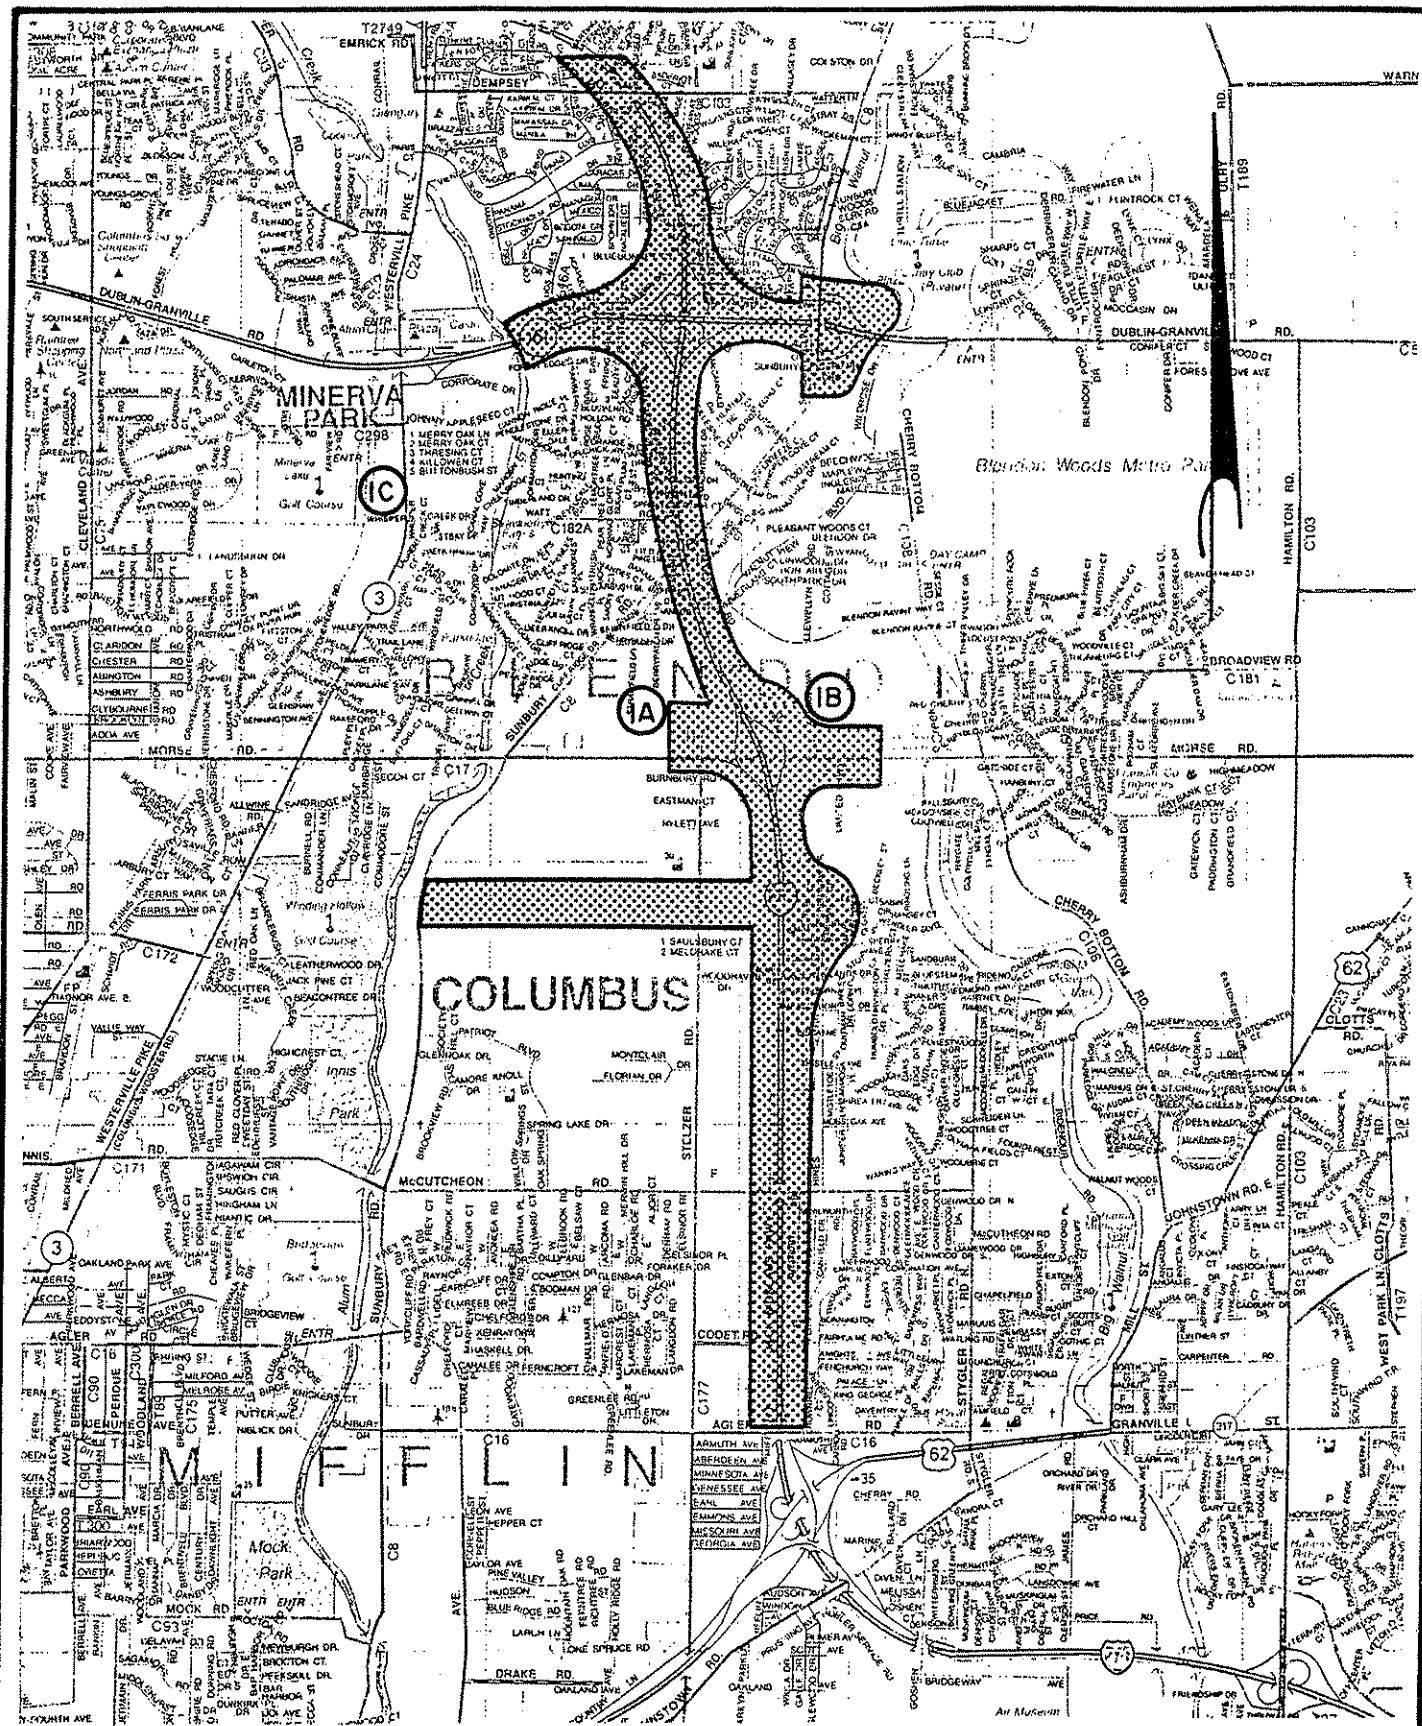

These service stations are within the assessment study area; therefore, additional information relative to the circumstances of these releases would be necessary prior to initiating roadway improvements adjacent to these properties. Documentation may be found in Appendix B.

It should be noted that underground storage tank registration and leakage notification have been mandatory only since 1986, with those entities ceasing use of their USTs prior to this time not required to register with this agency. It must also be stressed that the SFMO-BUSTR has jurisdiction over petroleum UST's only with UST's containing substances regulated by other laws (ODNR Oil & Gas, RCRA, CERCLA) monitored by other agencies and that some substances (i.e. heating fuel oil) are not registered with any agency. It should be noted that properties suspected of possessing USTs due to past land use are also identified in Figure III-4.

An example of this non-registration is found at Spa Warehouse, 4070 Morse Road. This address is also listed for Chemlawn, however, there are in fact (2) two separate locations at this address. A walkover inspection on October 14, 1992, revealed that the registered tanks at Chemlawn have been removed since the previous walkover and that at least two (2) underground storage tanks with a single diesel dispenser pump exist at the Spa Warehouse. Since the physical locations of the UST installations are separate, it is assumed that the tanks at the Spa Warehouse are unregistered. This property is of interest because of plans to widen the interchange at Morse Road and I-270 to the west.

Ohio Department of Transportation

The Ohio Department of Transportation (ODOT) maintains archives of aerial photographs, project drawings, title searches (chain-of-title) and other valuable information on former projects. As a State Highway (IR 270) is adjacent to the project area, ODOT's Bureau of Aerial Engineering in Columbus was contacted regarding available information.

Figure III-5
STATE FIRE MARSHAL'S
SUMMARY OF UST RELEASE INCIDENTS

Prepared by
ms consultants, inc.
Columbus, Ohio

Mr. Rick Hentz, in charge of aerial photographs and historical information for ODOT, noted that aerial photographs were available for the study area for the years 1956, 1960, 1964, 1972, 1979, and 1989.

A discussion of aerial photograph archives, including those obtained from ODOT, is presented under Section IV.

SECTION IV

INTERVIEWS AND PRIVATE RECORDS

Introduction

In addition to the public records searches conducted at the local, State and Federal levels, several private sources of information are available to assist in characterizing historical property usage of the subject property as well as selected adjacent parcels. These sources include photograph archives for the Mid-Ohio Regional Planning Commission (MORPC) and ODOT, map archives of the Sanborn Insurance Map Company, published atlases of the area, and public library/historical society records. Interviews can be conducted of the current property owners of selected adjacent properties as well as current/previous tenants of these properties to more fully characterize current and historical property use. These archives and interviews offer insights as to establish past property usage, verify building locations and use, property ownership, tenants, and any commercial/industrial processes which would be useful in determining the type and quantities of regulated substances used and the extent of possible contamination within the assessment study area.

Aerial Photograph Archives

Numerous Federal, State and local agencies, as well as private sources, were contacted to obtain available historical aerial photographs of the Study Area. Specific agencies included the Ohio Department of Transportation, Bureau of Aerial Engineering; Franklin County Soil & Water Conservation District; Franklin County Historical Society; Mid-Ohio Regional Planning Commission; and the City of Columbus Public Library, Biography and History Department. Aerial photographs of the study area were available from ODOT - Bureau of Aerial Engineering and the Franklin County Soil and Water Conservation District. Specific years of availability are as follows:

- ♦ ODOT - Bur. of Aerial Engineering: 1956, 1960, 1964, 1972, 1979 and 1989
- ♦ Franklin County Soil and Water Conservation District: 1938 and 1950

Aerial photographs from the ODOT Bureau of Aerial Engineering were available to a scale of either 1" = 800 feet or 1" = 1,000 feet and are reproduced on photographic paper to provide much detail of the study area. Aerial photographs of the area dated 1956, 1964, 1979 and 1989 were utilized to identify structures and define property usage for properties within and adjacent to the study area.

The earliest aerial photographs of the study area which was analyzed was taken in 1956. These photographs characterized the area as predominantly agricultural, with farm complexes including houses, barns, shed, silos and related structures shown to be located along Stelzer Road, McCutcheon Road, Agler, Morse Road, Sunbury Road, SR 161, and Hines Road. Cropland, grain fields and wooded areas encompass the vast majority of properties bounded by these roads.

The second earliest aerial photographs that were obtained from ODOT and reviewed are dated to 1964. Analysis of these photographs identify little change in property usage in the areas of the Stelzer Road and Modified Morse Road interchange alternatives. Residential development is apparent along Hines Road and along Stelzer Road within the first one-third mile south of Morse Road. Construction of a subdivision encompassing approximately thirty (30) residences is shown west of Stelzer Road, approximately 1/2-mile north of McCutcheon Road. Another residential development north of SR 161 just west of where I-270 later appears. Note that this photograph also represents the study area prior to construction of I-270.

Aerial photographs of the project area flown December 20, 1979, having an approximate scale of 1" = 1,000 feet. The most notable change is the presence of the I-270 corridor with the interchange at Morse Road. McCutcheon Road was improved by constructing an overpass structure at the location where I-270 and McCutcheon Road intersect. Agler Road was also improved with an overpass structure where Agler Road and I-270 intersect. Several residences that were previously noted to exist were acquired and demolished to permit construction within the freeway corridor. Land use in the area of the proposed interchange west of I-270 remained agricultural; however, significant development is illustrated east of I-270 and north of Morse Road. Several automotive

service stations were noted to be constructed after 1964 in the following locations:

- ♦ Northwest quadrant of Stelzer/McCutcheon intersection
- ♦ Southwest quadrant of Stelzer/McCutcheon intersection
- ♦ Southeast quadrant of Stelzer/McCutcheon intersection
- ♦ Southwest quadrant of Morse/Stelzer intersection
- ♦ Northwest quadrant of Morse/Stelzer intersection
- ♦ North side of Morse Road; east of I-270 interchange
- ♦ North side of SR 161; east of Sunbury Road
- ♦ North side of SR 161; west of Sunbury Road

Immediately adjacent to the western terminus of the Modified Morse Road Interchange area approximately 2000 feet north of the Stelzer Road Interchange location, the Northeast Career Center and Aladdin Shrine Temple complexes are present on Stelzer Road. A stormwater retention basin is noted to exist on the southern portion of the Northeast Career Center property.

Areas in the northwest, northeast and southwest quadrants of the I-270/SR 161 area are noticeably changed with residential development. The commercial development of the Sunbury Road/SR 161 interchange is just beginning in this photograph.

The most current aerial photographs of the study area which were examined were flown on December 7, 1989. Land use within the Stelzer Road Interchange areas was again observed to be agricultural. Significant development continued immediately adjacent to the I-270/Morse Road interchange. The Limited corporate headquarters, located in the southeast quadrant of the interchange, expanded from a single building to a four-building complex. Also noted to be present is the Columbus Public Schools Bus Complex, which is located northeast of the interchange. Several commercial buildings were also constructed north of Morse Road and west of I-270, including Jerry Greer Airstream and Chemlawn Corporation.

The most notable change in the McCutcheon Road area is the addition of the City of Columbus Fire Department Station No. 28, approximately 500 feet east of Stelzer Road and on the north side of McCutcheon.

The remaining land area in the northwest, northeast and southwest quadrants of I-270/SR 161 are developed to their maximum potential. The southeast quadrant remains

vacant with very little residential development along Sunbury Road. The Sunbury Road/SR 161 Interchange shows dramatic growth with the development of commercial properties to the north of SR 161 along the east and west sides of Sunbury Road.

Insurance Map Archives

The Sanborn Mapping Co. (fna Sanborn Fire & Insurance Co.,) of Pelham, New York, has provided communities across the country with detailed urban area mapping for fire, insurance and planning purposes dating to 1864. The archive section of Sanborn Map Co., was not contacted regarding the availability of historical insurance maps of the study area due to the fact that aerial photographs demonstrate primarily rural and agricultural land uses through the mid-1960s. There is little probability that this area has been mapped by Sanborn or can provide any further documentation.

SECTION V

WALKOVER SURVEY

Introduction

On December 20, 1991, February 25, 1992, and September 24-25, **ms consultants, inc.** personnel performed walkover surveys of the Morse Road/Stelzer Road, Agler Road, I-270/SR 161, and SR 161/Sunbury Road assessment study area, in Mifflin and Blendon Townships of Franklin County, Ohio. The assessment study area consists of the existing right-of-way of the I-270 corridor and arterials, adjacent properties along arterials where improvements would involve acquisition of additional right-of-way, as well as those parcels required for acquisition to construct a new interchange linking I-270 to Stelzer Road. The purpose of the survey was as follows:

- ♦ Verification of property boundaries and topographic conditions on and adjacent to the project area.
- ♦ Identification of areas for further investigation from present visible signs of past site activities.
- ♦ Identification of potential sources of contamination impacting the subject property.

The walkover survey can be documented through photography, survey, narrative, various sketches, and equipment readings. Documentation of the walkover survey may be found in the appendices.

Property Boundaries

The portion of the assessment study area for the I-270 and Stelzer Road Interchange involves the acquisition of right-of-way (R/W) both east and west of the I-270 corridor. If implemented, this project would involve the acquisition of those permanent takes and easement(s). Acquisition of additional right-of-way both east and west of the I-270 corridor would also be involved for the portion of the assessment study area

associated with the Modified Morse Road Interchange option with improvements continuing south to Agler Road. Table V-1 summarizes those parcels which may be affected.

The portion of the assessment study area for the I-270/SR 161/Sunbury Road improvements involve the acquisition of right-of-way, in all directions around the interchanges except the southwest quadrant of I-270/SR 161 interchanges. Table V-2 summarizes those parcels which may be affected with the new interchange alternative.

Both permanent takes and easements would be necessary to construct improvements along Morse Road, Stelzer Road, Agler Road, and McCutcheon Road. The amount of right-of-way acquisition involved along Morse Road and Stelzer Road can vary with interchange improvements at these locations.

Interchange improvements at I-270 and SR 161 and SR 161 & Sunbury Road will also require additional right-of-way acquisition in the area. The amount of right-of-way acquisition involved along SR 161 can vary with each interchange.

Property Topography, Geology, Hydrology

Topography, geology, and hydrology of the study area is of importance in establishing migration paths possible from potential contamination sources, as well as local surface water and groundwater flow.

The topography of the study area is generally characterized as being nearly flat to gently undulating terrain. Soils in the study area are almost entirely of the Bennington-Pewamo Association, which are poorly drained and have slow permeability. The surface layer is a friable silt loam with silty clay loam and clay loam beneath. The depth to bedrock is generally around 50 feet, and formations of dolomitic limestone, shale and sandstones.

With the presence of the poorly drained soils, rainfalls result in ponding and runoff to tributaries of Alum Creek, which is west of the study area and Big Walnut Creek, which is east of the study area.

Groundwater conditions have not been evaluated in detail to date. It is anticipated that migration would be very slow and would follow a direction generally corresponding

to the surface contours. For the study project area, the anticipated path of groundwater flow would be south to southeast.

Current Land Use

The evaluation of historical photography over the last decade illustrates the rapid conversion of agricultural lands to other non-agricultural uses, especially along Morse and Sunbury Roads. Much of the study area consists of vacant land which has already been properly rezoned for its intended use, which is a mixture of office, light manufacturing, distribution and hotel facilities. Initial phases of the Ross Park development adjacent to and south of the proposed Stelzer Road Interchange location have been completed with buildings, parking and a new electrical substation now present. Noted observations of the study area and adjacent properties are presented below. Photographic documentation is presented in Appendix D.

As mentioned in earlier sections, several properties including the B.P. Oil station and Dairy Mart along Morse Road have current or recent land uses indicative of the presence of regulated and/or hazardous substances. Improvements in the I-270/SR 161/Sunbury Road area include acquisition of commercial, residential and vacant property. These properties are located both north and south of SR 161 and east of Sunbury Road have the potential for asbestos containing materials being present and exempt or non-registered fuel oil UST's to be associated with these parcels.

Current improvement plans for Agler Road underpass modifications do not involve additional acquisitions in the area.

SECTION VI

SUMMARY OF FINDINGS

Findings

This summary reflects on assessment of State and Federal regulatory agency databases, private historical archives and known site history obtained as a part of this environmental study. A visual walkover survey was also provided as a part of this assessment. Based upon the information herein presented, the following findings are offered regarding the proposed improvements in the SR 161/Morse Road/Stelzer Road Area and I-270 Preliminary Environmental Site Assessment, as shown in Figure 1-1.

I. STUDY AREA PROPERTIES

1. For purposes of this assessment, the Study Area consists of the existing right-of-way encompassed by those segments of the I-270 corridor, from Agler Road north to SR 161 and Dempsey Road, and SR 161 at Sunbury Road, as delineated in this report. In addition, the study area also includes those parcels necessary for acquisition to construct a new interchange linking I-270 to Stelzer Road and improvements in the SR 161/I-270/Sunbury Road Interchange improvements. Examination and observations of adjacent properties is limited and assessed only for its impact upon the assessment study area, unless otherwise noted.
2. The assessment study area consists of property in Mifflin and Blendon Townships of Franklin County, Ohio.
3. Additional right-of-way acquisition is anticipated for I-270 mainline improvements from McCutcheon Road north to SR 161 and Dempsey Road. Examination of records and data bases do not indicate that there is minimal potential for the presence of either regulated or hazardous

substances within the existing or proposed right-of-way, based on historical land use, spill events, etc.

4. The following findings are presented relative to the Modified Morse Road Interchange area:
 - a. Examination of State and Federal databases indicates that there is minimal potential for either regulated or hazardous substances to be present on those properties within the project limits of the suggested interchange location.
 - b. Review of historical aerial photographs and limited observations made during the walkover survey of the multi-family apartments and garage structures east of the I-270 corridor indicate that these units were constructed some time after 1979. The potential for the use of asbestos containing materials (ACMs) as part of the construction of these units is minimal due to their age.
 - c. The single-family residences and farm structures bounded by the I-270 corridor to the west, Hines Road to the east, McCutcheon Road to the south and the multi-family apartment complexes to the north have the potential for the use of asbestos containing materials (ACMs) due to the age of these structures.
 - d. No underground storage tanks (USTs) are known to be within the construction limits of the project.

II. ADJACENT PROPERTIES

1. The Northeast Career Center, located immediately adjacent to the Modified Morse Road Interchange and northwest of the suggested interchange

location on Stelzer Road, is registered by both the State Fire Marshal's Office under BUSTR and U. S. EPA Hazardous Waste Notifiers List under RCRA. In addition, a liquid filled pond on the property secured by perimeter chain link fencing was observed to be present through aerial photographs and the field survey. Regulated substances have the potential to migrate to areas of proposed improvements to Stelzer Road Connector which is anticipated just south from this facility.

2. Improvements in the area of the existing interchange at Morse Road and I-270 also has the potential for encountering regulated substances. Several gasoline service stations are presently operating both west and east of I-270. In addition, commercial and governmental entities located adjacent to the interchange hold U. S. EPA permit numbers for facilities which store, use, generate transport or dispose of regulated and/or hazardous substances.

Recommendations

Based upon these findings from examination of local, State, and Federal records, known site history, and limited observations made during the walkover survey, regulated substances have the potential to be present within portions of the assessment study area and the Stelzer Road Interchange alternative in the Morse Road/Stelzer Road area. Specific recommendations pertain to Phase I and Phase II ESA for further examination about the properties environmental condition are discussed in the following paragraphs.

Several adjacent properties were identified as potential sources of contamination from petroleum USTs that are within the overall study area for the Morse Road/Stelzer Road area. These sources could affect any anticipated construction activities associated with the I-270 mainline, Modified Morse Road Interchange and arterial improvements to Morse Road. These findings are summarized in the following paragraphs and in Table VI-1.

1. Current interchange alternatives call for placement of fill along the northeast and northwest sides of I-270 north of Morse Road. With the limited right-of-way available, it is anticipated that additional right-of-way will be needed to allow for berm and drainage. The slopes are anticipated to be constructed by use of a retaining wall structure which will require subgrade foundation work. With the widening of I-270 the drainage ditch will need to be altered. This will require excavation on the property known as 600-126633 and 600-150026 located at 4070 Morse Road occupied by ChemLawn and Spa Warehouse. This facility has at least two (2) UST's existing on the property. A Phase I ESA will be required on these properties in order to clear the property for acquisition.
2. West of I-270 and north of Morse Road is a B. P. gas station, Parcel #110-2480, which is on the BUSTR UST Release listing. Evidence of subsurface soil exploration was evident indicating a Phase II ESA has been performed on this parcel. Current improvements do not include this parcel for acquisition, however, some drainage improvements in the area may impact this parcel. A Phase I ESA should be performed on this property.
3. The Dairy Mart store at 4242 Morse Road has reported a UST release. This parcel is east of I-270 and north of Morse Road, Current plans for improvement in this area do not include this parcel. However, if improvements in the area will affect this property, a Phase I ESA should be performed on this parcel.
4. The Stelzer Road Connector in its current alignment may impact the Parcel #010-15156 operated by the Northeast Career Center which is believed to contain UST's and hazardous substances. EMH&T has recently completed a Phase I ESA on this parcel and found there to be no problems at this facility. However, several discrepancies in local agency records were not

reconciled in this report. Therefore, a Phase I ESA should be performed on this parcel.

Also impacted by the Stelzer Road Connector is Parcel #010-146550 which is located along Sunbury Road at the far west end of the connector. This area is currently being used as a borrow area for construction of properties in the area. Aerial photographs identify this area as being excavated dating back to the early 1950's. Although no signs of contamination were evident during the screening process, a Phase I ESA should be performed on this parcel in order to clarify the activities which have taken place.

5. The assessment study area includes properties around the I-270/SR 161 interchange and SR 161 extended to Sunbury Road. Two (2) properties east of I-270 were identified as sources for potential problems. The first parcel (#110-5866) is occupied by UNISYS Company and is located adjacent to the SR 161/I-270 northbound ramp. The second parcel consisting of Lot Numbers 600-205695 and 600-202293 is located on the east side of Sunbury Road at SR 161. This property appears to have been a single-family residence which has been converted into a commercial building. Since both of these parcels have the potential for asbestos containing materials and underground storage tanks, Phase I ESA's should be performed in order to clear the property for acquisition.

Two single-family residences on the south side of 161 east of Sunbury will also be impacted by interchange modifications. These residences have the potential for USTs and ACMs to be present. The adjoining vacant lots are identified as Parcel Numbers 110-5800, 110-408, 010-213825 and 010-213826. Phase I ESA's should be performed on these parcels in order to identify any potential problems. Table VI-2 summarizes the above findings.

- S - parcel appears to be free of contamination based on preliminary screening information
- I - parcel appears to have the potential for containing hazardous materials and/or regulated substances on-site with the associated risk of contamination. This site is recommended for Phase I ESA.
- II - parcel has had known and/or reported contamination on it. Phase I ESA investigations are recommended to identify areal extent, if any, of contamination reported.

LIMITATIONS

The conclusions drawn and recommendations made rely solely upon information provided by the U. S. EPA, Ohio EPA, State Fire Marshal's Office, as well as other Federal, State, and local agencies herein presented. The assessment of groundwater flow and potential groundwater/soil contamination is based solely upon information provided in documents obtained during regulatory agency review with no subsurface soil borings or monitoring wells conducted as part of this study.

Additional information obtained by or provided to **ms consultants, inc.** after issue of this document, or any operations subsequent to assessment were completed, may modify and/or negate the findings included.

The accuracy of the conclusions drawn from the information herein presented is based solely on the accuracy of the information provided. No attempts were made to check the compliance of the present owners of the site or adjacent properties with Federal, State, or local laws and regulations.

* State top priority site

1: Date first eligible for Superfund action. First NPL proposed 12/82. Sites announced earlier in the Interim Priorities List (10/81) and Expanded Eligibility List (7/82) were included in the first proposed NPL.

2: Sites on the final NPL are numbered. Proposed NPL sites and all Federal Facility sites (F) are placed into groups (Gr) corresponding to groups of 50 on the final NPL.

RE: List of RCRA Notifiers in Ohio by Zip Code (1-Liner)

Dear Mr. Schmidt:

In response to your request and payment received August 5, 1991, enclosed you will find a printout of RCRA notifiers/USEPA ID numbers for Ohio, sorted by zip code. The companies are listed alphabetically within the zip. A key to the remarks is included. Not all of the remarks on the key may be shown on the printout due to space limitations.

You may have misunderstood Randy's description of the available sort orders; we do not have a zip code within county printout. Currently the five options are: alpha, numeric, county, zip code, and by Ohio EPA District Office boundaries. The zip code sort has a few fields that the other formats don't have, and it is the smallest geographical sorting mechanism. Therefore I chose this format for you; if it is not acceptable, please let me know.

The source of the notifier's list is a database maintained by the USEPA Office of RCRA. The information is from Notification of Regulated Waste Activity forms filed by applicants who wish to obtain USEPA ID numbers. An EPA ID is required in order to handle hazardous wastes and it is site-specific. If a site changes ownership the ID number remains the same. The ID can be inactivated but is never deleted from the database. It is the responsibility of the notifier to inform EPA of any subsequent changes in the site's status. Unfortunately this has been a problem and the fact that the source of the data is the notifier should be kept in mind when using the information.

If you have any questions or further requests, call me at (614) 644-2977.

Sincerely,

Paula Canter
Annual Report Coordinator
Data Management Section
Div. of Solid & Hazardous Waste Mgmt.

(1) STS

(Non Regulated Installation Status Indicator)

- 1 = Non-Handler (claimed)
Installation does not and will not use its EPA ID#. This includes: Protective Filers, and more than one ID# issued to same facility (these are called duplicates).
- 2 = Small Quantity Handler
- 3 = Dead Mail Facility
Installations that were sent mail outs from U.S. EPA or subsequent mailer, but information was returned as non-deliverable.
- 4 = RCRA Exempt Hazardous Waste Handler (other than recycler). Mining operations.
- 5 = RCRA Exempt Recycler.
- 7 = Non-Handler (claimed), but will be using ID#. This category is for installations that do not have any hazardous waste, but need an ID# to have their waste accepted by a transporter.
- 9 = Closed Non-TSD Installation.
- D = RCRA exempt recycler (precious metals)

(2) NNT

- N = Non Notifier
- S = Superfund Site Generating Waste Thru Cleanup

(3) ID NUMBER

(Installation U.S. EPA ID Number)

(4) FACILITY NAME

(Name of Installation)

(5) ADDRESS (Installation Location)

(6) CITY

(7) NOTIF (Date Installation Notified)

(8) GEN (GENERATOR)

- 1=Generators of at least 1000 KG/MO of NON-ACUTELY hazardous waste or 1 K.G/MO of ACUTELY hazardous waste
- 2=Generators of 100 KG/MO but less than 1000 KG/MO of non-acutely hazardous waste
- 3=Generators of less than 100 KG/MO of non-acutely hazardous waste

(9) TRS=X (Transporter)

(10) TSD=X (Treat, Store, and/or Disposal Facility)

(11) UIC=X (Underground Injection Control Facility)

(12) WAF=X (Waste as fuel facility)

(13) OSF=X (Off-specification used fuel oil marketer or burner)

(14) SOF=X (Specification used oil marketer or on site burner)

(15) PART A DATE

(Date Facility Submitted Part A)

(16) PAS=(PART A STATUS)

(TSD Facility Status Indicator)

1=Existing

2=New

3=Closed

(18) PER (PERMIT STATUS)

0 = Other

1 = Interim Status/Permit Candidate

2 = RCRA Permit Issued

3 = Permit-By-Rule

4 = Part A Withdrawal Candidate

5 = Part A Withdrawal/Part B withdrawn, never met Interim Status Criteria

6 = Part A/Part B withdrawn, Interim Status NOT TERMINATED7 = Part A withdrawn, Interim Status TERMINATED

8 = ISCL or Compliance Order in lieu of Interim Status

9 = New Facility-Part B application received

A = RCRA Permit denied

(17) NON

(Non-Regulated Part A

Status Indicator)

A=Asbestos

B=Drum Recycling

C=Elementary Neutralization

D=Elementary Neutralization & Wastewater Treatment Unit

E=Exempted Waste

F=Non-Hazardous Waste

G=Pickle Liquor

H=Protective Filing

J=Raw Materials

K=Recycling

M=Small Quantity Generator

N=Storage Fewer Than 90 Days

P=Transfer Facility

Q=Transporter

R=Wastewater Treatment Unit

S=Non-Existing Facility (Never Built)

Z=Multiple Categories

8=Closure Candidate

9=Withdrawal

1. The first part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

2. The second part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

3. The third part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

4. The fourth part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

5. The fifth part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

6. The sixth part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

7. The seventh part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

8. The eighth part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

9. The ninth part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

10. The tenth part of the document is a list of names and their corresponding addresses. The names are listed in the left column, and the addresses are listed in the right column. The names are: John Doe, Jane Smith, and Bob Johnson. The addresses are: 123 Main St, 456 Elm St, and 789 Oak St.

APPENDIX B

STATE AGENCY DOCUMENTATION

DIVISION OF EMERGENCY AND REMEDIAL RESPONSE

MASTER SITES LIST

1991

I. INTRODUCTION

The 1991 Master Sites List (MSL) is a database developed by the Ohio EPA Division of Emergency and Remedial Response (DERR), Remedial Response Program. The MSL lists and tracks sites in Ohio where hazardous waste; as defined under the Ohio Revised Code (ORC) 3734.01(J), have been found, or where there are any known, suspected, or likely releases of such wastes from a facility. Many of these sites are abandoned or uncontrolled and are not currently operating facilities. These sites are referred to as "unregulated" hazardous waste sites because the treatment, storage or disposal of hazardous waste occurred prior to the enactment of the Resource Conservation and Recovery Act of 1976 (RCRA). RCRA was created to regulate hazardous waste generation, treatment, storage and disposal. The Ohio EPA Division of Solid and Hazardous Waste Management oversees RCRA sites in Ohio.

The DERR MSL is the Division's working database, developed by the Division for tracking and listing purposes only. The MSL includes a diversity of sites of varying environmental concern. It is not a comprehensive list of all sites known to the Ohio EPA. It is a list of unregulated sites that the Division of Emergency and Remedial Response (DERR) will evaluate and act upon if deemed necessary. The MSL is an evolving list, sites are added on a monthly basis. Therefore, this publication presents information as recent as March, 1991.

Once a site has been added to the MSL, it is tracked and flagged with the appropriate indicator to provide general information on the status of each site in the DERR. Sites are not removed from the MSL in order that the list can provide a historical record of activities at each site. However, the DERR is considering deleting sites from the MSL that are not to be addressed by the DERR (see Future Changes for the MSL, Section VI).

Inclusion of a specific site or area on the MSL does not represent a determination of any party's liability, nor does it represent a finding that any response action is necessary.

Words that are presented in bold type are defined in Appendix A.

II. BACKGROUND

In July 1989, Ohio EPA's Office of Corrective Actions was reorganized to coordinate its responsibilities with two other Ohio EPA programs: the Special Investigations Section and the Office of Emergency Response. The result was the organization of the Division of Emergency and Remedial Response. The Division's mission within Ohio EPA is the investigation, cleanup and remediation of hazardous waste. These responsibilities are administered through three major program areas:

- Emergency Response - Response to chemical and petroleum releases, spills and waste dumping incidents that present or may present an immediate threat to human health or the environment.
- Special Investigations - Investigations initiated from allegations of environmental violations that involve hazardous waste, solid waste, infectious waste, air pollution or water pollution that may result in criminal, civil and/or administrative enforcement.
- Remedial Response - Discovery, prioritization, investigation and remediation of unregulated hazardous waste sites through enforcement.

The Remedial Response Program of DERR is responsible for the discovery, listing, prioritization, investigation and remediation of unregulated hazardous waste sites. This work is coordinated with other sections within the DERR as well as other Ohio EPA programs. These efforts are accomplished through legal enforcement proceedings. The DERR ensures that efforts conducted or overseen by the Division are consistent with state and federal laws and regulations, and all applicable guidance and criteria. Investigations and cleanups overseen by the Remedial Response Program are conducted in a manner consistent with the **Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA)**, and the **National Contingency Plan (NCP)**.

III. OHIO EPA - DERR AND U.S. EPA SUPERFUND COORDINATION

U.S. EPA inventories and tracks chemical releases addressed or needing to be addressed by the Superfund program through the **Comprehensive Environmental**

Response, Compensation, and Liability Information System, or CERCLIS. CERCLIS contains the official inventory of CERCLA sites and supports U.S. EPA's nationwide planning and tracking functions.

Since the enactment of CERCLA, U.S. EPA has identified and worked on 34 **National Priority List (NPL)** sites in Ohio, all in coordination with Ohio EPA. The Ohio EPA, DERR works in conjunction with U.S. EPA in overseeing the investigation, remedy selection, remediation and future operation and maintenance at NPL sites. As directed under CERCLA, U.S. EPA must follow the NCP to systematically investigate and remediate the Nation's worst hazardous waste sites. Progress has been made at many of the sites under the federal Superfund program; however, it has been extremely slow, expensive, and inadequate to meet Ohio's cleanup needs.

IV. THE DERR MASTER SITES LIST

The Master Sites List (MSL) was created in 1988 for the listing, tracking and reporting of "unregulated" sites in Ohio. The majority of sites listed on the DERR MSL are a result of past referrals by the U.S. EPA CERCLIS database. Sites listed on CERCLIS were automatically added to the MSL until 1989 when new procedures were implemented by the DERR for site listings. These procedures require that sites be evaluated using state standards and prioritization criteria before being added from CERCLIS to the MSL. State sites are also added to the MSL due to inter-program and inter-agency referrals, citizen complaints, and DERR's discovery efforts. Therefore, all Ohio sites listed on CERCLIS may not be listed on the MSL and vice versa.

The DERR has over 1,160 potential hazardous waste sites in Ohio. Over 400 of these sites have been identified as high or medium priority where further investigation is necessary.

A. MSL Referrals

Sites are added to the MSL through a referral from DERR staff housed in each of five district offices. Before a site is referred, an evaluation is performed to determine whether or not a release, or potential for a release, of hazardous waste has or may occur from the treatment, storage, or disposal of such waste. A cursory evaluation is conducted to determine whether or not a threat or potential threat to human health or the environment has or may occur and an interim or remedial response by the Agency is required. Lastly, an evaluation is made to determine whether or not the DERR is the regulatory program responsible for addressing the site.

B. MSL Prioritization

An initial priority is assigned by the DERR based on a preliminary evaluation of the site. This evaluation includes a review of files for site history, past disposal practices, and regulatory history with other Ohio EPA or U.S. EPA programs.

The priorities assigned by the DERR differentiate sites into four categories for future site inspections: high, medium, low and zero. A brief description of these priorities is provided below:

High sites where there is evidence (or it is suspected) that hazardous waste has been managed and there is evidence of a release of hazardous waste which may present a substantial threat to public health or safety.

Medium- sites where there is evidence (or it is suspected) that hazardous waste has been managed and there is the potential for a release of hazardous waste which may present a substantial threat to public health or safety or there is evidence of a release of hazardous waste which may cause or contribute to or threaten to cause or contribute to air or water pollution or soil contamination.

Low- sites where there is evidence (or it is suspected) that hazardous waste has been managed and there is the potential for a release of hazardous waste which may cause or contribute to or threaten to cause or contribute to air or water pollution or soil contamination.

Zero- sites where there is evidence (or it is suspected) that hazardous waste has been managed but there is no potential for a release of hazardous waste.

V. MSL INFORMATION

The MSL includes a diversity of sites of varying environmental concern in various stages of investigation and/or remediation. These sites are regulated by the DERR in conjunction with other state and/or federal programs. Outlined below is a list of information categories used in the MSL. A brief description of each category is also given.

EPA ID	SITENAME AND ADDRESS	NPL	LP
OHIO ID		CERCLIS	OR
COUNTY		PRIORITY	OS
		ACTIVE SITE	OT

EPA ID- A federal site identification number assigned by U.S. EPA. This may be a CERCLIS or RCRA identification number.

OHIO ID- A seven digit Ohio identification number assigned to a site when it is added to the DERR Master Sites List.

COUNTY- The county in which the site is located.

SITENAME AND ADDRESS- The name of the site and address where it is located.

NPL: Indicates whether or not the site is listed on the USEPA National Priorities List.

CERCLIS: Indicates whether or not the site is also listed on USEPA's CERCLIS list based on the most recent list available to the Ohio EPA. Sites are cross-checked by site name and identification number.

PRIORITY: An initial priority assigned by the DERR based on a preliminary evaluation of the site. In some instances the priority has been revised based on additional information concerning the site.

DATE: The date of the assigned priority.

ACTIVE SITE: An indication that the DERR is actively involved at the site. The DERR considers a site to be active in any of the following situations:

- Sites in negotiation or under orders with the DERR for **removal, interim action, remedial investigation, feasibility study, remedial design, remedial action, and/or operation and maintenance.**
- Sites where DERR is utilizing its contractors for any of the above activities because the **potentially responsible party** could not be determined or was unwilling or unable to perform the necessary actions.
- Sites where DERR personnel are actively involved in oversight and/or investigatory activities either in conjunction with another Ohio EPA program or another government agency. These sites may not be under agency enforcement agreements or may be under agreement with another agency or program (i.e., U.S.EPA or Ohio EPA).

LP: Lead Program. Designates which Ohio EPA program has the lead on the site. The lead is determined by the program which has regulatory jurisdiction for the site (i.e., RCRA, Wastewater, etc.).

OR: Indicates whether or not an order is in place for the site.

OS: If an order is in place, the date the order was signed or journalized by the Ohio EPA or USEPA (for NPL sites).

OT: Type of order in place, designated by one of the following:

- RI/FS- Remedial Investigation/Feasibility Study
- RD/RA- Remedial Design/Remedial Action
- RI-RA - RI/FS through RD/RA
- IA- Interim Action
- REMOVAL - Removal action

- COST- Cost Recovery
- INVES- Investigation
- C- Consent Agreement
- U- Unilateral Order
- F- Fund Lead
- US- U.S. EPA
- O & M - Operation and Maintenance

VI. CHANGES FROM THE 1990 MSL EDITION

The DERR has made several changes to the 1991 version of the MSL. These changes were made in an attempt to clarify and more specifically define the status of the sites listed. Outlined below are changes reflected in the 1991 MSL.

A. Removal of Duplications and Addition of an Alias Appendix

DERR has removed duplicate listings of sites from the 1991 MSL. Many sites were listed in duplicate due to multiple site names. Some listings include individual sites that are being addressed as one comprehensive site due to the large area of concern. Duplicate listings have been removed and any aliases (AKA's) have been added to the primary site name. In order to cross reference these sites, DERR has included an appendix of aliases (Appendix B). Sites that have been identified by several different names will be listed by the site name as listed on the MSL in addition to all aliases.

B. Removal of U.S. EPA FIT Priority

Previous versions of the MSL listed the U.S. EPA priority based on their Field Investigation Team (FIT) criteria and prioritization scheme. DERR has removed this priority because it does not accurately reflect the state's priority for every site. U.S EPA FIT priorities can be obtained from the CERCLIS database maintained by the U.S EPA Superfund program in Region V. Priorities given in the 1991 MSL are those of the Ohio EPA, DERR.

C. New Information

State Prioritization/Date of Review

The MSL lists DERR's priority for sites where a **preliminary assessment (PA)** has been conducted. DERR has historically conducted PAs in conjunction with U.S EPA. These PAs were funded by U.S. EPA and were conducted using the CERCLA Hazard Ranking System (HRS). Many of the priorities reflected in this list are based on data generated in those assessments. The majority of PAs conducted by the Ohio EPA, in conjunction with U.S. EPA, were completed in the mid-1980's. The Ohio EPA assigned a separate state priority to many of these sites. These priorities were assigned based on a state evaluation using state criteria, not

the U.S. EPA HRS scoring system.

The priorities reflected in the 1991 MSL are those of DERR, and may not necessarily reflect the priority of U.S. EPA. Priorities have been reevaluated for some sites where new information has become available and a reassessment was conducted. Reevaluations will continue as limited staff and resources allow. DERR has included the date of the most recent assessment made of the site. This date reflects when information on the site was documented in either a PA (Preliminary Assessment) or in a reevaluation.

Active Site

The 1991 MSL includes a category that flags a site as a DERR active site. An active site, as described more fully in Section IV of this document, indicates that DERR staff and/or resources have been committed to the site. DERR is currently working on approximately 100 active sites. Where a site is designated as "Active", no priority is assigned. It can be assumed that if the Division is actively working on a site, the PA prioritization is no longer necessary.

Lead Program

If a site is an active site, an additional category has been added to indicate the lead Ohio EPA program for the site. The lead program is the program with regulatory jurisdiction over the site (i.e., DERR, RCRA, Wastewater, etc.).

Order Information

Other categories added to the active site listings indicate if a U.S. EPA or Ohio EPA order is in place for the site, the type and the date of the order.

A more detailed description of MSL categories can be found in Section IV, MSL Information

VII. FUTURE CHANGES FOR THE DERR MSL

DERR is currently working towards revising and updating the Master Sites List. The MSL contains a number of sites that do not accurately reflect the Division's site priorities and responsibilities. Many sites that were listed directly from CERCLIS in the early years of the division (1988-1989) are regulated under another program with no DERR involvement. Other sites, upon preliminary evaluation, were found to have little or no contamination and therefore present no current or future threat to human health or the environment.

DERR is currently evaluating the MSL and will delete these sites. The MSL will then more accurately reflect the priorities of DERR and will not duplicate sites regulated, and therefore tracked, under another program with no DERR involvement. DERR will continue to list and track those sites that are considered DERR active or potentially active. These sites will be listed and prioritized consistent

with DERR criteria and procedures. An example of the type of sites that may be deleted include:

- RCRA permitted treatment, storage and disposal facilities where DERR has no involvement
- Sites where there is no evidence of hazardous waste treatment, storage or disposal and where there is no evidence of contamination

VIII. RCRA CORRECTIVE ACTIONS

DERR is working in conjunction with the Division of Solid and Hazardous Waste Management (DSHWM) in providing technical oversight at RCRA Corrective Action Sites. These sites are listed and prioritized by DSHWM in coordination with the U.S. EPA RCRA program. DERR does not prioritize RCRA Corrective Action Sites according to DERR standards and criteria. Investigations and cleanup are conducted according to DSHWM/RCRA procedures. Therefore, these sites will not be listed on DERR's MSL for ranking, prioritization and any future enforcement by DERR. Some of these sites may be addressed by DERR in the future if the site is found to include an unregulated unit or contaminated area where RCRA authority does not apply. Some RCRA Corrective Action Sites are already on the MSL due to past listings as described in Section IV.

A separate listing of Ohio EPA RCRA Corrective Action sites can be obtained from the Division of Solid and Hazardous Waste Management, Ohio EPA.

IX. SUMMARY

The MSL evolved from U.S. EPA's efforts to list unregulated hazardous waste sites in Ohio that could warrant further investigation and possible listing on the federal government's National Priority List (NPL). CERCLIS is the informational database upon which the NPL draws to target sites for funding from Superfund and for enforcement pursuant to Superfund authorities.

In Ohio, DERR's MSL is comparable to CERCLIS. It is informational in nature, listing known areas where there is evidence of a release of hazardous waste or areas suspected to have the potential for a release of hazardous waste contamination. The MSL is a planning tool for DERR. It is referred to by the Division to assess a workload projected over the next 20 to 30 years. It is referred to in order to make decisions about priorities, staff assignments, budget allocation and overall Division capabilities given this significant caseload.

The MSL is not a list of sites specifically targeted for enforcement. Mere listing is not to be interpreted as an Agency decision or pronouncement on "liability" or "fault."

but the source or cause of contamination is unknown to DERR.

Not only has the MSL evolved from CERCLIS and U.S. EPA's purposes, but it has also evolved from the public's need to know. The MSL has been maintained so as to provide interested persons with a quick reference to areas of concern if they need to know anything about contaminated property or suspect property in Ohio. DERR finds that the MSL has been of interest to public officials, local health departments, commercial developers, insurance companies, banks, and attorneys-- all seeking to make informed decisions about land value or acquisition or development or any other land use. The MSL may thus be used as a "point of

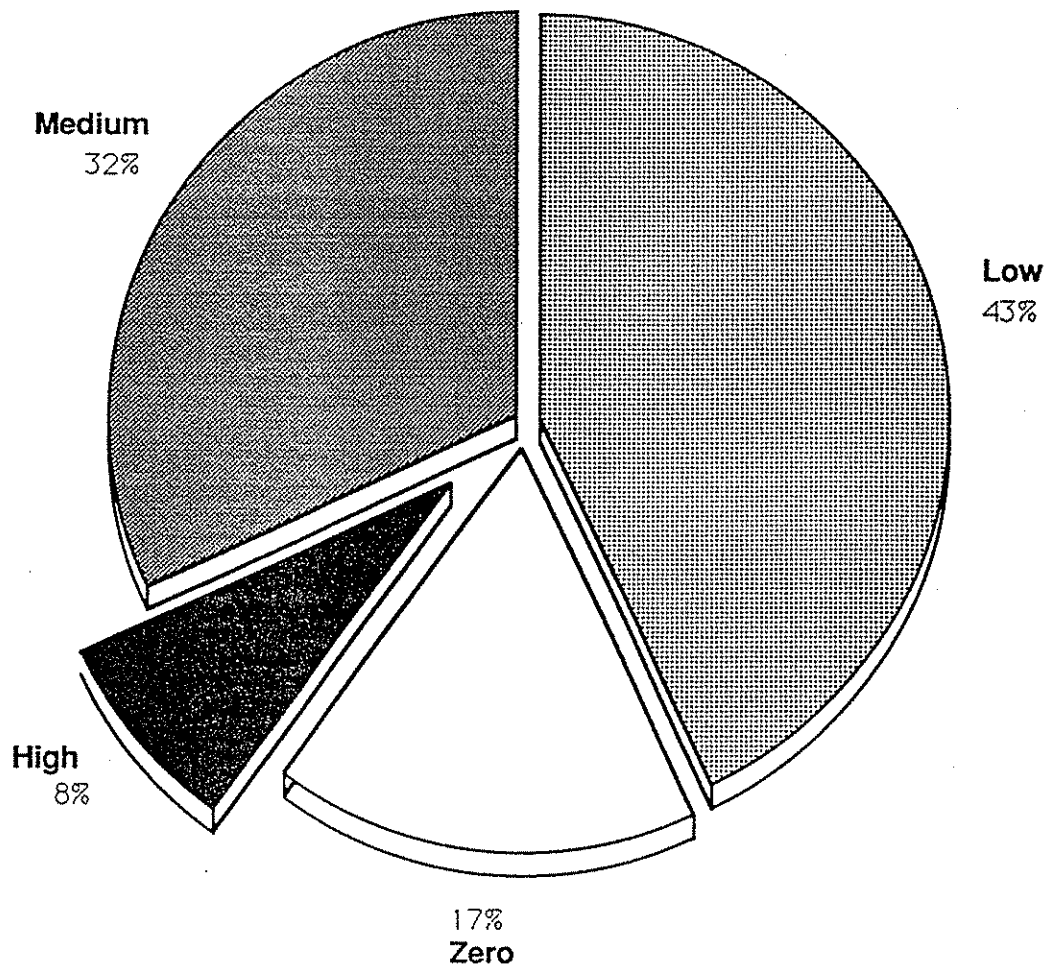

departure" for more thorough and site specific investigation of the property in question. Again, mere listing by DERR is not a formal pronouncement about "liability" or "source" or "cause" of contamination. Nor is listing necessarily an indication of a thorough field investigation by Ohio EPA, a comprehensive analysis of all environmental conditions at the site, or firm conclusions by Ohio EPA regarding the site.

The MSL is a planning tool for DERR. Each annual edition of the MSL will change to reflect activities of DERR, to report that some sites have been cleaned up, and unfortunately, but predictably, to identify more sites that have been discovered and added to the list.

Re: Environmental Assessment
Proposed Interchange for I-270
Morse & Stelzer Roads Area in Mifflin and Blendon
Townships, Cities of Columbus and Gahanna, Franklin County

Dear Ms. Orth:

This office is conducting an environmental assessment for the above referenced project. A general site map of the project area is shown attached.

As part of the preliminary site evaluation and screening, Federal, State, and Local Regulatory Agencies are being contacted regarding the location of any known spills, or generators of potentially hazardous or regulated substances past or present, within the project area. The area involved would include Postal Areas 43219 and 43230. Individual street addresses would be as follows:

<u>Street Name</u>	<u>Zip Code Area</u>	<u>Addresses</u>
Appian Way	43230	All
Morse Road	43219	3600 - 4038
Morse Road	43230	4039 - 5600
Stelzer Road	43219	2000 - 3999
McCutcheon Road	43219	2100 - 3999
Agler Road	43219	3000 - 4099

Ms. Jean Orth
December 23, 1991
Page 2

Any and all information and records of underground and aboveground storage tank registrations, closures, clean-up plans, spills or related activities is kindly requested for facilities in this area.

I understand that the fee associated with data requests is \$0.50 per page for the first 25 pages and \$0.25 per page thereafter. Should the cost of this data request exceed fifty dollars (\$50.00), please contact me for further authorization.

Should you have any comments or questions, please feel free to call.

Sincerely,

A handwritten signature in black ink, appearing to read "Kenneth W. Ricker". The signature is fluid and cursive, with the first name "Kenneth" being more prominent.

Kenneth W. Ricker, PE
