

# MnDOT Photogrammetry & Remote Sensing

# Joke

**What do you call a map guide to Alcatraz?**

Answer

---

**A Con Tour Map**

# Photogrammetry and Remote Sensing at MnDOT

## Who we are

- Part of the Office of Land Management
  - Located in St. Paul – Central Office
- 13 employees
- 5 ASPRS Certified Photogrammetrists
- 1 ASPRS Certified Lidar Technologist
- 3 FAA Certified Remote Pilots
- Two subgroups with field operations
  - UAS
  - Mobile Mapping

## What we do

- The Photogrammetric Unit provides statewide photogrammetric and remote sensing products and services.

# Pre 2020 Airborne Lidar

- Sparse break lines
- Void of water only

# 2020-2021 Airborne Lidar

- More break lines
- Void water only

# Post 2021 Airborne Lidar

- More break lines
- Low confidence voids
- Stereo adjusted on soft surfaces

# Photogrammetry & Lidar Combined

- Lidar on hard surface
- Both lidar and photogrammetric extraction in soft surface
- Void areas placed in low confidence areas
- Every project is reviewed in stereo

# Is It Working?

## Comparison of random check shots to terrain models

- Quick check
- Looking for trends
- NVA stayed the same
- VVA improved
- Correlation between VVA photogrammetric accuracy and hybrid?

Airborne Lidar					
Year	# Of Projects	Average NVA (RMSEz) FT	# Of Checkshots	Average VVA (RMSEz) FT	# Of Check shots
2020-2021	19	0.08	1662	0.25	1011
2022-2023	17	0.08	1939	0.17	1705

Photogrammetric					
Year	# Of Projects	Average NVA	# Of Checkshots	Average VVA	# Of Checkshots2
2020-2021	14	0.13	1896	0.18	397

Mobile Lidar			
Year	# Of Projects	Average NVA	# Of Checkshots
2022-2023	6	.018	1939

# Vertical Accuracy KMZ

# UAS

- 2014 to 2017 was R&D First Drone in 2017

- Lidar sensor since 2021

- Provide

## **Program is a Huge Success**

- Planned on 15 projects first year to meet ROI and we had over 50 projects. Growth continues.

## **Groups we Support Statewide**

- Surveys\Design

- Cultural Resources

- Geotech\Foundations

- Snow Fencing

- Rail

- GIS

- Water Resources

- We have a strong relationship with Aeronautics

## **Data we Collect**

- Imagery

- Lidar (Design &GIS)

- Multispectral (NIR)

# New - MnDOT Mobile Lidar Team

**We are creating a mobile lidar subgroup within our unit**

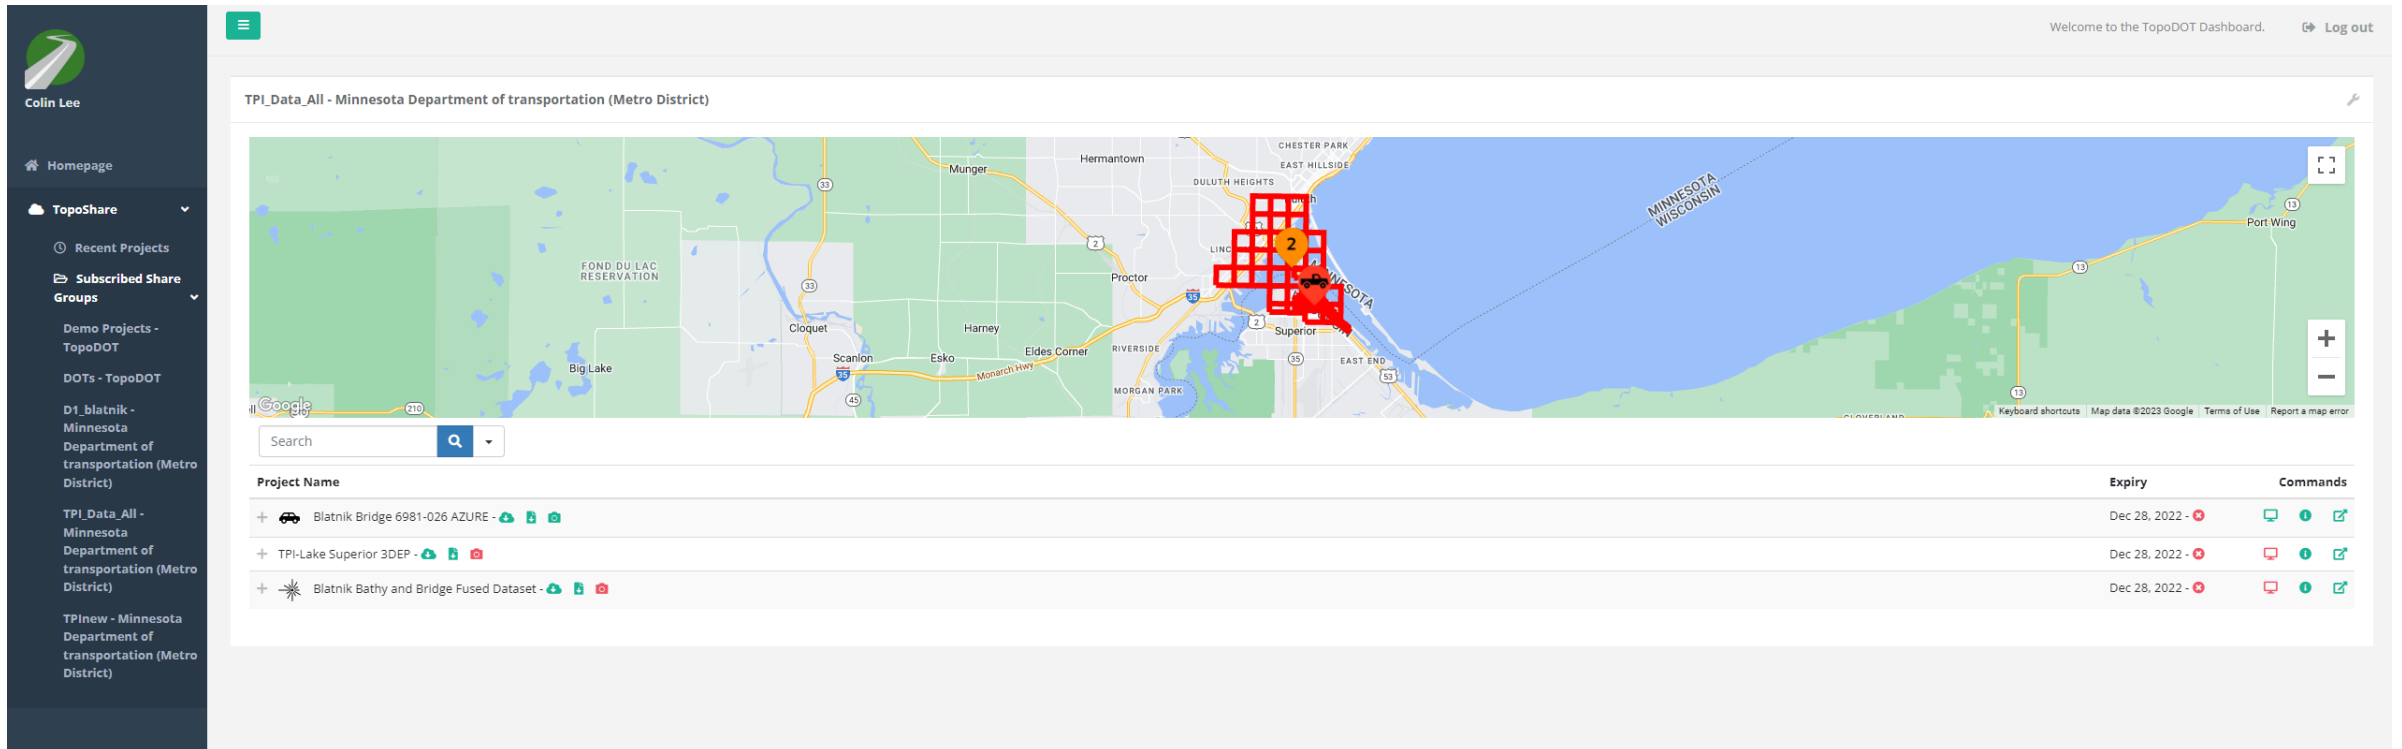

- Waiting for delivery
- Creating a new coordinator position
- Survey, Asset Mgmt, GIS (As-builts)
- Ground control by district surveyors

# New - Lidar Storage & Management

Surveyors statewide requested Photogrammetry & Remote Sensing store and manage all MnDOT lidar data.

- Airborne and terrestrial, including asset grade and district scanning
- Beta

The screenshot displays the TopoDOT Dashboard interface. On the left is a dark sidebar with navigation options: Home, TopoShare, Recent Projects, Subscribed Share Groups, Demo Projects - TopoDOT, DOTs - TopoDOT, and three project entries for 'TPI\_blatnik - Minnesota Department of transportation (Metro District)'. The main area features a map of Minnesota with a red grid overlay on the Superior area. Below the map is a search bar and a table of project data.

Project Name	Expiry	Commands
+  Blatnik Bridge 6981-026 AZURE -	Dec 28, 2022 -	
+ TPI-Lake Superior 3DEP -	Dec 28, 2022 -	
+  Blatnik Bathy and Bridge Fused Dataset -	Dec 28, 2022 -	

# Questions

# MnDOT BIM/Digital Delivery

I'm not a BIM expert. Just relaying information. Instead, Contact:

Angela Boardman  
Digital Program Delivery/BIM Coordinator

\*Currently working on a Digital Delivery Implementation Plan

## 2024-25 District Operations Pilot Projects aim to expand use of Digital Delivery and Advanced Construction Technologies

MnDOT is progressing toward a digital project delivery model. Imperative to design more projects in 3D, pass usable models out to contractors and inspectors, collect field data electronically, and employ advanced digital construction technologies like e-ticketing. Use of shared 3D models increases agility in the design process. Digital field inspection lessens the risk of errors and reduces the time required for generating payments. And e-ticketing improves safety by eliminating the need for an on-site ticket taker. These projects provide opportunities to understand how MnDOT can reap the benefits of digital delivery. District goals for expanding MnDOT's digital delivery capabilities

District(s)	Digital Delivery/Advanced Digital Construction Goal
1, 6, 8	Using Mobile Inspector software with Trimble GPS rovers for field inspection, then synching data back to AASHTOWare
2	Providing electronic files for horizontal alignment and 3D milled surfaces to be let as contractual
3, 4	Using 3D models to help populate inspection and field material testing forms
7	Providing 3D files--for informational purposes only--to contractor and inspector
Metro	Expanding e-ticketing

- Quantimate
  - Quantimate is an initiative to better automate quantities and cost estimation between products. The high-level solution will use the Bentley infrastructure Cloud (powered by iTwin) and the AASHTOWare Open API as the communication between the Bentley civil products with AASHTOWare Project.
- Asset Management and Pay Item Integration
  - MnDOT Project Data Management Section has continued working with the Asset Management Office to map asset type to pay items. We currently are pulling pay items from AASHTOWare Project by contract into Agile Assets with indication of asset type's by contract. This will allow the asset management team to be proactive on as-built collections.
