are Profile Grade*

SECTION ON PROFILE GRADE- NORTHBOUND BRIDGE

159+00
11-12 February 1910
The first attempt to
be sent off in types of
the following day was unsuccess-

PROPOSED STRUCTURE

TYPE: Continuous steel beam with reinforced concrete deck and substructure.
SPANS: Southbound bridge; 38'-0 1/16", 50'-4", 52'-6 1/4", 42'-3"
Northbound bridge; 37'-8", 49'-10", 52'-0", 41'-10"
ROADWAY:
Southbound: 50'-0" f/f Parapet, with 1'-2" Curbs.
Northbound: 40'-0" f/f Parapet, with 1'-2" Curbs.
LOAD FREQUENCY: C.F. 400 (51)
SKEW: Southbound bridge, 36°-20' R.F.
Northbound bridge, 35°-33' R.F.
WEARING SURFACE: 1" monolithic concrete
APPROACH SLABS: AS-1-54 (25'-0" Long)
ALIGNMENT: Southbound bridge tangent
Northbound bridge partially on 0°-15' curve

FOUNDATION SOUNDINGS: Foundation design and foundation capacities are based on a study of rod soundings and -sampling soundings made at the site. This sounding information, the accuracy of which the State does not guarantee, may be examined in the office of the Bureau of Bridges in Columbus or in the Division Office.

GENERAL NOTES

REFERENCE shall be made to Standard Drawing SD-1-63 Sheets 2, 3 and 4, dated 11-12-63 SD-2-64, dated 11-25-64, FSB-1-62, rev 1-15-63, BR-1-65 Sheet 1, revised 11-24-65 & Supplemental Specifications No. 808 dated 2-7-66, 811 dated 3-29-65, 825 dated 4-22-65, and 828 dated 3-21-66.

DESIGN SPECIFICATIONS. This structure conforms to the requirements of "Design specifications for Highway Structures" of the State of Ohio. Department of Highways, dated 9-1-57, together with current revisions thereof.

FOUNDATION BEARING PRESSURE: Abutment footings are designed for a maximum bearing pressure of 1.7 tons per sq ft. Pier footings are designed for a maximum bearing pressure of 4.5 tons per sq ft.

DESIGN DATA:
Design Loading -CF 400 (57).
Concrete Class C - basic unit stress 1,333 psi.
Concrete Class E - basic unit stress 1,133 psi.
Structural Steel - ASTM A36 - basic unit stress 20,000 psi.
(ASTM A7 and A373 steel not permitted)
Reinforcing Steel - ASTM A15, A16, A160, Deformed, Intermediate, or Hard Grade. Basic unit stress 20,000 psi. Except, spiral reinforcement may be plain, Structural Grade with basic unit stress of 18,000 psi.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of concrete shall progress up-grade. The slab may be placed in sections, between transverse construction joints which are parallel to transverse reinforcing steel and are located near the center of any span.

MACHINE FINISH: The concrete bridge deck shall be finished by the use of a finishing machine.

UTILITY LINES
All expense involved in relocating the affected utility lines shall be borne by the owners. The Contractor and Owners are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to a minimum.

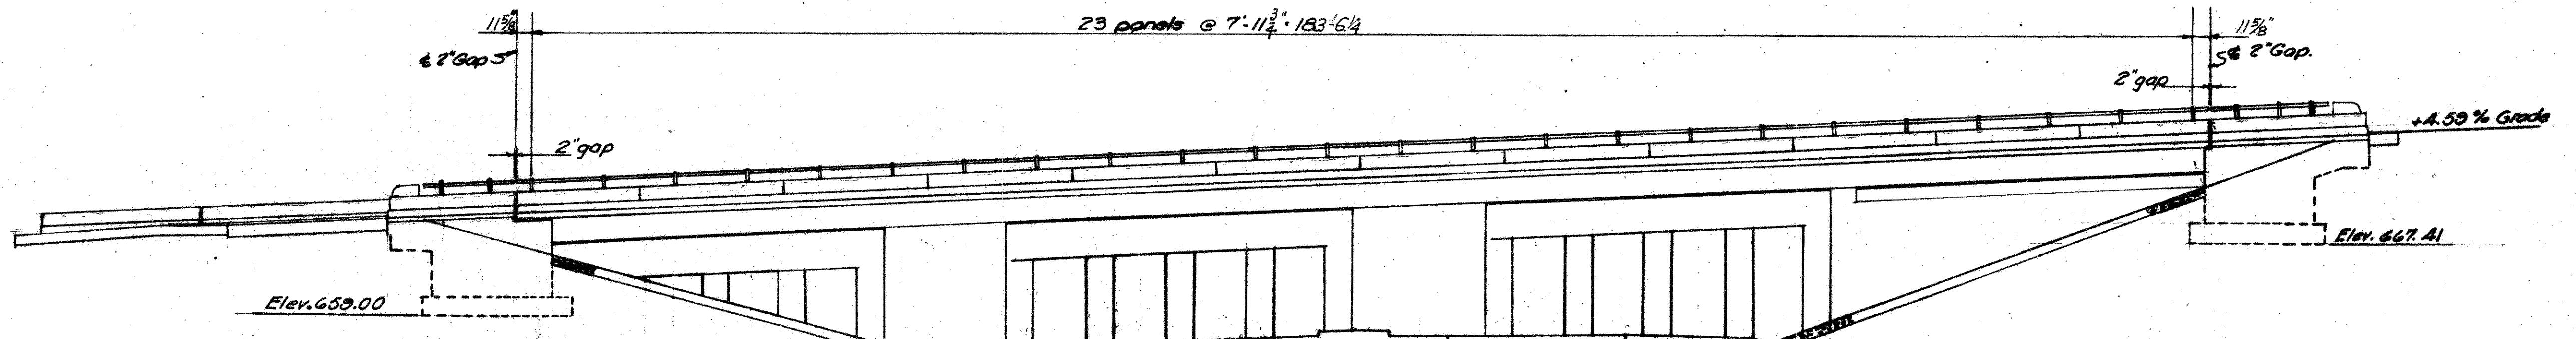

FOOTINGS on rock shall extend to a minimum of 3" into the undisturbed rock, or to the elevation shown, whichever is lower.
