Date of Letting Contract No. IR-70-1(45)24

IR-70-1(45)24

UNDER AUTHORITY OF SECTION 4511.21, DIVISION (I) OF THE REVISED CODE OF OHIO, THE REVISED PRIMA FACIE SPEED LIMITS AS INDICATED HEREIN ARE DETERMINED TO BE REASONABLE AND SAFE, AND ARE HEREBY ESTABLISHED FOR THE DURATION OF THIS PROJECT. THE PRIMA FACIE SPEED LIMIT OR LIMITS HEREBY ESTABLISHED SHALL BECOME EFFECTIVE WHEN APPROPRIATE SIGNS GIVING NOTICE THEREOF ARE ERECTED.

LIMITED ACCESS

This improvement is especially designed for through traffic and has been declared a limited access highway or freeway by action of the Director in accordance with the provisions of Section 5511.02 of the Revised Code of Ohio.

1991 SPECIFICATIONS

The standard specifications of The State of Ohio, Department of Transportation including changes and supplemental specifications listed in the proposal shall govern this improvement.

I hereby approve these plans and declare that the making of this improvement will not require the closing to traffic of the highway and that provisions for the maintenance and safety of traffic will be as set forth on the plans and estimates.

Approved G. Kenneth Capella, P.E.
Date 8/22/88 District Deputy Director of Transportation

Approved B. D. Hamilton
Date 5-24-90 Engineer, Bureau of Bridges and Structural Design

Approved Kenneth M. Miller
Date 3-14-91 Chief Engineer, Planning and Design

Approved Jerry Wray
Date 3-14-91 Director, Department of Transportation

CONTINGENCY QUANTITIES

The Contractor shall not order materials or perform work listed in the General Summary for items designated by plan note to be used "as directed by the Engineer" unless authorized by the Engineer. The actual work locations and quantities used at the Engineer's discretion shall be made a matter of record by incorporation into the final change order governing completion of this project.

CONSTRUCTION PLANS

Reference is hereby made to the following designated plans for former construction project included in this proposed improvement. Copies of these plans are on file at the District 7 office of the Department of Transporation, Sidney, Ohio.

MOT-40-2.73
MOT-40-5.98
MOT-40-7.96
MOT-40-11.07
MOT-40-6.53
MOT-Union Road

UNDERGROUND UTILITIES

The locations of the underground utilities shown on the plans are as obtained from the owners of the utility as required by Section 153.64 ORC.

UTILITY OWNERSHIP

The following utilities and owners are located within the work limits of this project:

GENERAL TELEPHONE AND ELECTRIC
6464 WESTBROOK RD.
CLAYTON, OHIO 45315
513-833-0463
Contact Person, Roger Fornay

DAYTON POWER AND LIGHT

PROFILE AND ALIGNMENT

The proposed pavement resurfacing course shall follow the alignment and profile of the existing pavement, except as designated in proposed full depth pavement areas. Previous construction plans showing the original alignment and profile grade are on file for inspection if necessary at the ODOT District 7 office. See Construction Plans Note above for listing. The proposed asphalt concrete overlay shall have a uniform thickness with tapers as shown on these plans.

LOCATION OF GUARDRAIL

The locations of guardrail runs, as shown in these plans, are subject to adjustment prior to final acceptance. The Engineer shall be satisfied that all installations will afford maximum protection for traffic.

GUARDRAIL REPLACEMENT

No hazard shall be left unprotected except for the actual time necessary to remove, grade and reinstall guardrail in a continuous operation. The removal of all guardrail shall at all times be as directed by the Engineer. No guardrail shall be removed until the replacement material is on the site, ready for installation. Failure to comply with this requirement shall be deemed sufficient cause to order work suspended on this project until such time that the Engineer is assured of said compliance.

PART-WIDTH CONSTRUCTION

Because of the necessity of building (portions of) this project under traffic and constructing the full pavement width in stages, extreme care shall be taken to prevent the construction of a butt joint on centerline in the base courses. Longitudinal joints shall be lapped as shown on Standard Construction Drawing BP-5.

MILE MARKER LOCATION

The location of mile markers on the plans are approximate and a more precise location will be provided by the department. The Contractor shall notify the Engineer at least 30 days in advance of the planned date of marker installation. The Engineer will contact the bureau of technical services which will locate the longitudinal position of mile markers by means of a paint mark on the pavement edge. Alternate marks will not be provided on divided highways and the contractor shall set markers for the opposite roadway across from the provided mark. Delineators whose normal position falls within 50 feet of a mile marker shall be omitted.

TEMPORARY SOIL EROSION AND SEDIMENT CONTROL

The following estimated quantities are provided in the Summary to be used as directed by the Engineer, for temporary erosion and sediment control measures:

207 Temporary Seeding and Mulching	44,875	Sq. Yd.
207 Straw or Hay Bales	150	Each
659 Commercial Fertilizer	10.58	Ton
659 Repair Seeding and Mulching	11,220	Sq. Yd.
659 Water	97	M. Gal.

SEEDING

Quantities for seeding are calculated for the soil areas between four (4) feet outside the excavation/embankment limits, as shown on the cross sections and typical sections.

ITEM SPECIAL - PRECAST REINFORCED CONCRETE OUTLET

Precast reinforced concrete outlets shall be provided at the outlet end of all pipe underdrains and farm drains except when they outlet into a dainage structure. See details on sheet 79A.

ITEM 660 - REINFORCED SODDING

Reinforced Sodding Shall be placed at the ends of the proposed type 4A curb as shown on standard drawing MC-7 for the following bridges:

MOT-70-0662
MOT-70-0759
MOT-70-0859
MOT-70-1322

An estimated quantity of 690 Sq. Yds. has been included in the General Summary for this work.

ITEM 304 - AGGREGATE BASE, AS PER PLAN

Materials furnished for this item shall exclude all slag except granulated slag or crushed air cooled blast furnace slag.

BRIDGE TERMINAL ASSEMBLY, TYPE AA OR AT, AS PER PLAN

All holes at Bridge Terminal Assembly posts in the thrie beam section adjacent to the Bridge shall be slotted 3/4"x 2 1/2" and bolts shall be tightened as specified at expansion joints as per 606.05. The cost for all material, labor and equipment necessary to perform this work shall be included in the price bid for ITEM 606 - BRIDGE TERMINAL ASSEMBLY, TYPE AA OR AT, AS PER PLAN.

CLEARING & GRUBBING

Although there are no trees and/or stumps specifically marked for removal within the limits of this project, a Lump Sum quantity has been included in the General Summary for Item 201, Clearing and Grubbing. All provisions as set forth in the Specifications under this Item shall be included in the Lump Sum price bid for Item 201, Clearing and Grubbing.

EROSION CONTROL

Items 601 and 660 are provided in the plans for erosion control. Rock of a stable nature will not be removed in order to place any of these items, and turf of a stable nature will not be removed in order to place 660. The Engineer shall check and non-perform quantities or adjust locations and quantities for these items where indicated by field conditions during construction. In addition these items shall meet the requirements of CMS 108.04.

FULL DEPTH RIGID PAVEMENT REMOVAL & RIGID REPLACEMENT, CLASS C AND FULL DEPTH PAVEMENT SAWING

WHERE SS 803 AND 905 APPEAR IN THE PLANS SHALL BE CONSIDERED TO READ 255.

F.H.W.A. REGION	STATE	PROJECT	
5	OHIO		

MOT - 70- 6.53/11.02

12
219

GENERAL NOTES

ITEM 202 - CURB REMOVED, AS PER PLAN,
The unit bid price for Item 202 - Curb Removed, as per plan, shall include the removal and disposal of the existing barrier curb, backfilling the void with bituminous material Item 301, regrading and restoration of the adjacent turf berm where applicable to assure good drainage. Drainage ditches should be maintained as much as possible. This item shall include all labor equipment and material necessary to complete the work to the statisfaction of the Engineer.

See Detail "A" and "B", Sheet N° 109.

ITEM 301 - BITUMINOUS AGGREGATE BASE; MWS-60.
A quantity of 500 Cu. Yds. is carried to the General Summary for Item 301 - Bituminous Aggregate Base. This is to be used in those locations designated under Item 203 - Excavation Not Including Embankment Construction and for repair of any seated areas that may have been "punched through" by the cracking and seating operations. From sht. 13 - 40 Cu yds, a total of 540 Cu.yds. carried to General Summary

ITEM 407 - TACK COAT,
The rate of application of 407 Tack Coat shall be subject to adjustment, as directed by the engineer.

Plan quantities indicate average application rates of 0.10 gallons per square yard of tack coat for estimating purposes only.

TRAFFIC CONTROL STANDARD CONSTRUCTION DRAWINGS

References to supplemental specifications 857, 858, 861, 957, 958, and 961 on the traffic control standard construction drawings in these plans shall be considered to read as respective references to items 630, 631, 633, 730, 731 and 733.

645 - Pavement Markings, By Type, 740. 0.5 INLAID, As Per Plan

This material is being installed as a field evaluation comparing to it to standard painted markings in adjacent sections.

The inlaid markings shall be layed out and installed as required by 645 and the manufactorer's directions. They shall be inlaid into the newly placed asphlt final course as described in 645.02. The contractor shall assign adequate personnel to layout and place the tape before final rolling is completed. Placement and rolling of the markings shall be completed before the asphalt pavement surface temperature cools below 150°F.
In Lieu of 740.05, the marking material shall be Stamark Pliant Polymer marking tape model A-380 (White) or A381 (Yellow) as manufactured by 3M Company, Traffic Materials Division, St. Paul Mn. 55144-1000.

WATERING AND MOWING PERMANENT SEEDED AREAS
The following estimated quantities are to be used as directed by the engineer to promote growth and to care for the permanent seeded areas, as per 659.09:

659	Water	485 M. Gal.
659	Mowing	505 M. Sq. Ft.

JOINT SEALERS
All references to 705.01 or 705.02, appearing on standard drawings or on the plans, shall be considered to read 705.04.

REPLACE UNDERDRAIN OUTLET
10' of existing 6" underdrain pipe outlet shall be removed and replaced with new 6" Conduit, Type F complete with Precast Reinforced Concrete Outlet. The new conduit shall be placed at the same grade as the existing pipe. Type C delineators shall be installed at all replaced outlets. Refer to the drawings for the exact locations of the outlets to be replaced.

ITEM 605 UNCLASSIFED PIPE UNDERDRAINS, AS PER PLAN
The existing 6" pipe underdrain and filter/backfill material shall be removed from the trench. New 6" pipe underdrains shall be installed in the same location and elevation as the existing pipe underdrain. New filter/backfill material shall be placed in the trench. Sand and/or slag will not be permitted for filter/backfill material. Pavement restoration details shall be in accordance with the details on sheet 4. Payment for removal of the existing pipe under is included in Item 605 Unclassified Pipe Underdrain, As Per Plan.

ITEM SPECIAL - IMPACT ATTENUATOR, G-R-E-A-T SYSTEM

This work shall consist of furnishing Temporary Impact Attenuators, as required in the plans This item shall include all related hardware, not separately specified, as required by the manufacturer to construct complete and functional G-R-E-A-T impact attenuator systems The Impact Attenuator shall be manufactured by the Energy Absorption Systems, Inc, One East Wacker Dr, Chicago, Illinois 60601, Tel (312) 467-6750 The Attenuator shall be placed in accordance with the Manufacturer's Specifications and at the location shown on sht 102

The Contractor shall be responsible for inspection, repairing, and otherwise restoring the temporary Impact Attenuator in accordance with the manufacturer's maintenance instructions while it is in use on the project. Such repairs shall be performed within twelve (12) hours of the incident, which caused damage to the attenuator. The contractor shall be responsible for supplying all necessary materials and equipment required to perform the above described restoration of the attenuator. One (1) extra complete set of Hex-Foam Cartridges, as manufactured by Energy Absorption systems, Inc. for the attenuator furnished, shall be stocked at all times for the above repairs and the cost shall be included in the cost of the temporary attenuator.

The nose cover of the temporary attenuator shall be marked with three evenly spaced four (4) inch wide horizontal stripes of white reflective material

Payment for the above work shall be made at the unit price bid for each, Item Special, as described below, which priced shall be considered full payment for furnishing, installing, at the specified locations, furnishing extra hex-foam cartridges as specified above, restoration after each vehicle impact, including all labor, tools, equipment and miscellaneous hardware and materials necessary to complete this item of work in place Also included in the above cost shall be the removal of the temporary impact attenuator and installation at the location specified for the next stage of construction, as directed by the Engineer.

Item Special - Temporary Impact Attenuator, G-R-E-A-T System,
Model number 200200NFGGCZ - - - - 3 each

MAINTENANCE OF TRAFFIC

F.H.W.A. REGION	STATE	PROJECT	
5	OHIO		

MOT - 70 - 6.53/11.02

14 219

GENERAL REQUIREMENTS

It is the intention to perform the required work with the least inconvenience to and the maximum safety of the Contractor and the traveling public. The requirements for maintaining traffic as indicated in the Ohio Manual of Uniform Traffic Control Devices for Streets and Highways (referred to as "Ohio Manual"), current edition, and pertinent items of the Ohio Department of Transportation (ODOT) specifications and proposal shall apply in addition to the following notes.

The work limits shown on the plans are for physical construction only. The installation and operation of all traffic control and traffic control devices required by the "Ohio Manual" shall be provided by the Contractor whether inside or outside the work limits.

Should any paved areas not designated for maintaining traffic become damaged or destroyed due to the Contractor's negligence or failure to provide adequate signs, barricades, cones, flaggers or other traffic control devices, the restoration of the paved areas shall be at the Contractor's expense to the satisfaction of the Engineer.

Should the Contractor desire to, an alternate Maintenance of Traffic Plan may be submitted for approval. No alternate plan shall be placed in effect until approval has been granted in writing by the Director.

ITEM 614 - MAINTAINING TRAFFIC

The Contractor shall maintain traffic at all times in accordance with the requirements of Specification 614 and as specified herein.

Traffic is to be maintained in a uniform pattern throughout the entire length of the project. Work can be performed simultaneously in the eastbound and westbound lanes, provided the operations do not interfere with each other. The Contractor shall arrange his operations so as to prevent any interference to the flow of traffic. All vehicles, equipment, men and their activities are restricted at all times to one side of the directional pavement unless otherwise approved by the Engineer.

Vehicles and equipment shall always move with, and not across or against the flow of traffic, except as noted below. Vehicles and other equipment shall not park or stop except within designated work areas, and shall not enter and leave work areas in a manner which will be hazardous to, or interfere with the normal traffic flow. Personal vehicles will not be permitted to park within the right-of-way.

The use of berms to control traffic is prohibited unless otherwise approved by the Engineer. Should any existing or new berm areas become damaged or destroyed due to the Contractor's negligence or failure to provide adequate signs, barricades, flaggers, or other traffic control devices, the restoration of the berms will be at the Contractor's expense, unless otherwise approved by the Engineer.

The Contractor shall arrange traffic control devices so traffic to and from I-70 is maintained at all times and at all interchanges, unless other wise approved by the Engineer. A "ROAD CONSTRUCTION AHEAD" sign (OW-128) shall be placed on all ramps leading onto I-70 and at work limits.

The Contractor will be required to provide, erect, maintain (proper position, kept clean and legible, and in good working condition), and remove lights, signs, barricades, cones and all other traffic control devices necessary for the maintenance of traffic. All signs shall be reflectorized or illuminated. Placement of all traffic control devices shall start and proceed in the direction of the flow of traffic. Removal of traffic control devices shall start at the end of the construction area and proceed toward oncoming traffic. The Contractor shall provide for the installation of all necessary traffic control devices before beginning work and immediately remove these devices when work is suspended or completed.

A minimum traveled lane width of eleven (11) ft. is to be maintained at all times, or as directed by the Engineer. In any areas where a lane would be less than eleven (11) ft. for construction purposes, the adjacent shoulder shall be marked to allow the minimum eleven (11) ft. width for the traveled lane.

Lane closures for pavement cracking and seating, joint repairs, pavement resurfacing, or bridge deck work shall be in only one lane of pavement direction at any given time.

No lane or shoulder closures will be permitted from 2:00 PM on the day preceding a holiday to 6:00 AM on the day following the holiday. Whenever a Saturday or Sunday falls within this period the holiday shall be considered to be a three day holiday including both Saturday and Sunday.

On this project the above shall be placed into effect on the following holidays:

New Year's Day
Memorial Day
Independence Day
Labor Day
Thanksgiving Day
Christmas Day

All Lanes Shall Remain Open To Traffic In The Vicinity Of Bridge No MOT-70-1420 Until August 15, 1991.

TRAFFIC CONTROL

The installation, maintenance and operation of traffic control devices shall conform to the requirements of the "Ohio Manual" and as specified per Item 614.03.

Before the work begins, the Contractor will provide the Engineer with the names and telephone number(s) for two persons who can be contacted 24 hours a day by the Engineer and affected public agencies to repair and/or replace the traffic control devices as needed to maintain the safety of the traveling public.

The Contractor shall notify the Engineer of any proposed revisions to existing traffic control devices. The contractor shall obtain the Engineer's approval prior to making any of these revisions.

The standard device for closing any lane(s) to traffic shall be properly weighted and reflectorized steel or plastic drums. Optional 28 inch traffic cones may be used for daytime operations in lieu of drums or barricades, if approved by the Engineer. To increase stability, cones may be weighted by double stacking, sandbagging, or as approved by the Engineer. Steel rings or chains of any type placed over the cones will not be permitted.

Channelization devices such as barricades, vertical panels and drums shall be constructed, reflectorized, and used in accordance with Item 614.03 and the "Ohio Manual". Channelizing devices shall be spaced at a maximum interval of 50 feet center to center unless otherwise directed by the Engineer. Steel drums placed on newly paved asphalt surface courses shall be placed on 1/2" plywood pads or their equivalent. Channelizing devices along the edge of the work area shall be equipped with Type C barricade warning lights. The Contractor shall adjust the spacing on all channelizing devices as directed by the Engineer to allow access as required while maintaining safety during construction.

The Contractor shall furnish and install two (2) "WATCH FOR STOPPED TRAFFIC" signs (OW-166) 1300 feet downstream from the "ROAD WORK AHEAD" sign (OW-134). If traffic backups reach the "WATCH FOR STOPPED TRAFFIC" signs, the Contractor shall install two (2) additional "WATCH FOR STOPPED TRAFFIC" signs every 2000 feet upstream from the "ROAD WORK AHEAD" sign. The necessity for these signs shall be constantly monitored by the Contractor.

The Contractor shall be responsible for maintaining safe and adequate traffic control at all times.

TEMPORARY PAVEMENT MARKING

Temporary pavement markings shall be installed as shown on the plan sheets and at locations as directed by the Engineer. All existing or temporary pavement markings that will conflict with traffic flow shall be removed by the Contractor in accordance with Item 621.134. Painting (black) over the pavement markings is not an acceptable method of removing pavement markings. All markings shall be according to Item 621 and the "Ohio Manual". For additional details, See Sheet No.18.

QUANTITIES

The following estimated quantities have been included in the General Summary to be used as directed by the Engineer for the Maintenance of Traffic.

ITEM 404	Bituminous Concrete for Maintaining Traffic	50 C.Y.
ITEM 410	Traffic Compacted Surface, Type A or B	500 C.Y.
ITEM 616	Calcium Chloride	10 TON
ITEM 616	Water	50 M. GAL

ITEM 622 - PORTABLE CONCRETE BARRIER (PCB)

Portable concrete barriers shall be used at the edge of the traveled lane prior to the full depth pavement removal in the adjacent lane. They shall be placed such that the traveled lane has a minimum width of eleven (11) feet. These barriers shall remain in place until the work in the area is completed, as directed by the engineer.

Where Temporary Concrete Barrier appears in the plans, it shall be considered to read Portable Concrete Barrier (PCB). PCB is identical to 622 Temporary Concrete Barrier except for the changes shown in the plans.

Supplementing 622.08: The method of measurement for PCB shall include the total of each individual placement of PCB required by the plans without regard to whether the same specific section of PCB could be reused again on the project.

ITEM SPECIAL - LAW ENFORCEMENT OFFICER WITH PATROL CAR

During the erection or take down of the temporary traffic control devices needed to reduce traffic to a single lane, the Contractor shall provide for the services of a law enforcement officer with a patrol car for controlling traffic and to protect the workers placing the traffic control devices. The Contractor shall procure the services of the law enforcement officer. Should the contractor desire the use of a law enforcement officer with a patrol car at other times, the cost shall not be paid for separately, but included in the cost of ITEM 614-MAINTAINING TRAFFIC.

Payment for the above will be made under "ITEM SPECIAL-LAW ENFORCEMENT OFFICER WITH PATROL CAR". An estimated quantity of 300 hours is provided in the GENERAL SUMMARY.

ITEM SPECIAL - REPLACEMENT DRUMS

Drums furnished by the contractor in accordance with the requirements of the plans, specifications and proposals which become damaged by traffic for reasons beyond the control of the Contractor shall be replaced in kind when ordered by the Engineer, and shall be paid for under ITEM SPECIAL-REPLACEMENT DRUMS. Payment for each new drum shall include: (1) The cost of removing and disposing of the damaged drums and (2) providing, maintaining and removing the replacement drums in accordance with the contract requirements of the original drums. An estimated quantity of 200 each replacement drums has been provided in the GENERAL SUMMARY.

ITEM SPECIAL - REPLACEMENT SIGNS

Flat sheet signs furnished by the Contractor in accordance with the requirements of the plans, specifications, and proposals which become damaged by traffic for reasons beyond the control of the Contractor shall be replaced in kind when ordered by the Engineer. Payment shall include the cost of removing and disposing of the damaged signs, hardware and supports, etc. Replacement signs shall be new but other material may be used subject to approval of the Engineer. Payment for the new sign shall be made at the bid price per square foot for ITEM SPECIAL-REPLACEMENT SIGNS, for which an estimated quantity of 100 sq. ft. has been provided in the GENERAL SUMMARY.

TRENCH FOR WIDENING

Trench excavation for base widening shall be only on one side of the pavement at a time. The open trench shall be adequately maintained and protected with drums or barricades at all times. Placement of proposed subbase and base material shall follow as closely as possible behind the excavation operations. The length of widening trench which is open at any one time shall be held to minimum and shall at all times be subject to approval of the Engineer.

EXTENSION OVER MORE THAN ONE CONSTRUCTION SEASON

If this project extends over more than one construction season, no cracked and seated pavement, no binder course, leveling course, or intermediate course will be permitted to be exposed over the winter months between construction seasons. The Contractor shall be responsible for scheduling the asphalt construction to meet the above conditions.

PAYMENT

Payment for all the Maintenance of Traffic except for items designated as "ITEM 404, Bituminous Concrete for Maintaining Traffic", "ITEM 410, Traffic Compacted Surface, Type A or B", "ITEM 614, Temporary Pavement Markings", "ITEM 616, Calcium Chloride", "ITEM 616, Water", "ITEM 622, Temporary Concrete Barrier", "ITEM SPECIAL, Law Enforcement Officer with Patrol Car", ITEM SPECIAL, Replacement Signs", and "ITEM SPECIAL, Replacement Drums" shall be included in the Lump Sum "ITEM 614, Maintaining Traffic". Estimated quantities have been carried to the General Summary.

MAINTENANCE OF TRAFFIC NOTES

MAINTENANCE OF TRAFFIC

F.H.W.A. REGION	STATE	PROJECT	
5	OHIO		

MOT-70-6.53/11.02

15
219

MAINTENANCE OF TRAFFIC (STRUCTURES)

1. Each crossroad bridge shall be closed to traffic prior to any work on that bridge. All work shall be completed before the bridge is re-opened to traffic. Detours for City, County and Township Roads Shall be established, maintained and subsequently removed by the Contractor.
2. A thirty calendar day time limit will be in effect for all bridge closures.
3. Closures of adjacent bridges over I-70 (mainline) will not be permitted.
4. Signs, barricades, and gates, placed in accordance with the Ohio Manual, and as directed by the Engineer, shall be furnished, installed, and removed by the Contractor.
5. During ramp closures, the Contractor shall provide for the detours, according to this sheet, including signing within the project limits.
6. Ramps at interchanges must remain open at all times during the time the bridges within the interchange are closed to Traffic.
7. The Contractor is to provide a preliminary notification of detour set-up in writing at least two weeks before any closure. A final notification is to be provided 48 hours prior to the closure. *
8. The cost for all of the above shall be included in the price bid for Item 614 - Maintaining Traffic.

CONSTRUCTION ON I-70 BRIDGE OVER SR 48

When construction on Bridge MOT-70-1130 L & R (I-70 over State Route 48) is in progress, the contractor will be permitted to close various lanes of SR 48 in order to facilitate construction while separating work areas from the traveled lanes. At no time will the contractor be permitted to close more than one lane in either direction on SR 48, except for short duration closures, as directed by the Engineer. The Contractor shall utilize proper channelizing devices and shall utilize temporary concrete barriers at the work area. Only the lane adjacent to, or below, the work may be closed. When work is proceeding on the center pier of the bridge, or on the median of State Route 48, the contractor may close the left-hand northbound lane and the southbound left turn lane simultaneously as work areas.

The Contractor shall also provide informational signing during the time the existing overhead signs are removed from the bridge for construction. These signs shall be ground mounted route marker assemblies for I-70 on SR 48 to be paid under Gly Maintaining Traffic.

The temporary concrete barrier locations and quantity calculations for State Route 48 are as follows:

WORK LOCATION	DIRECTION	STATIONS	LENGTH
Outside Piers	Eastbound	308+30 to 310+30	200'
	Westbound	309+15 to 311+15	200'
Centerline Pier	Eastbound	307+85 to 311+85	400'
	Westbound	307+35 to 311+35	400'
		TOTAL	1200'

A quantity of 1200 Lineal Feet of ITEM 622 - TEMPORARY, CONCRETE BARRIER has been carried to the General Summary.

* Notification Shall be to:
Vic Roberts - City of Englewood Engineer - 836-5106
Allen Cox - Montgomery County - 225-6122
Charles Ward - Randolph Township Road Superintendent 836-6086 or 836-7009

DETOUR TABLE

PHASE	ROAD CLOSED	DETOUR ROUTE
1	Northbound State Route 49 (Closed at IR-70 Exit Ramp) (MOT-70-0821)	State Route 49 to Hoke Road, East on IR-70, Exit IR-70 at State Route 48, to U.S. 40, to State Route 49
	Southbound State Route 49 (Closed at Razor Run) (MOT-49-1269L)	U.S. 40, State Route 48, IR-70, and Hoke Road
	Dog Leg Road (MOT-70-1322)	Little York Road, Frederick Pike and U.S.R. 40
2	Diamond Mill Rd. and Crestway Dr. (MOT-49-1279L & MOT-70-0662 & MOT-70-0759)	Westbrook Rd., Hoke Rd. and U.S.R. 40
	Union Road (MOT-70-0962)	Old Salem Rd., Taywood Rd. and Wenger Rd.
3	Kimmel Rd. (MOT-70-0708)	Crestway Dr. and Wenger Rd
	Hoke Rd. (MOT-70-0859)	S.R. 49, Old Salem Rd., Union Rd. and Wenger Rd.

MAINTENANCE OF TRAFFIC DETAILS

Construction on I-70 shall be staged as follows:

STAGE 1

During Stage 1, traffic will be maintained on the right-hand lane of the directional pavement. The Contractor will strengthen the left shoulder by removing the existing shoulder and replacing with Class A Temporary Pavement. Strengthening is required in areas adjacent to new full depth pavement. Channelizing devices will be placed accordingly.

STAGE 2

Upon completion of the work in Stage 1 for the length of the project, the Contractor shall direct traffic to the left-hand lane and strengthened shoulder utilizing temporary markings to maintain the 11 ft. width of the traveled lane. During this stage, the contractor will work in the right lane(s) and shoulder, completing breaking and seating, improvement of the right shoulder, and placement of the Type 301 Bituminous Aggregate Base.

RAMP DETAILS:

During Stage 2, construction in the area of the interchange ramps shall be performed in the following sequence: (See RAMP CLOSURE DETAILS)

Phase 1: Traffic will be maintained to and from the ramps through the use of gaps in the right-hand lane(s) as shown on the detail sheet.

Phase 2: When all work has been completed on the right-hand lane(s) and shoulder, the contractor shall be permitted to close the ramps to complete the work in the gap areas. Closing of a ramp will not be permitted while the crossover bridge at the same interchange is closed. Ramps providing an alternate route for other ramps closed to traffic at adjacent interchanges cannot be closed concurently.

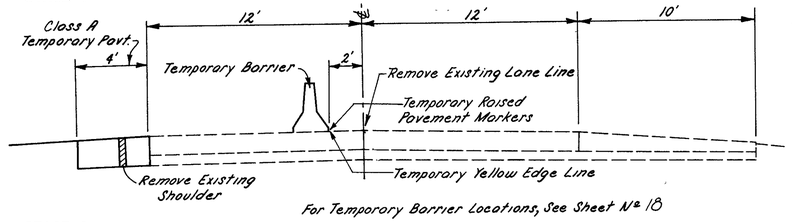
STAGE 3

When Stage 2 is completed, the Contractor will direct traffic to the right-hand lane and shoulder, maintaining the 11 ft. width of the traveled lane by the use of pavement markings. The contractor will then complete the breaking and seating, and paving operations in the left-hand lane.

STAGE 4

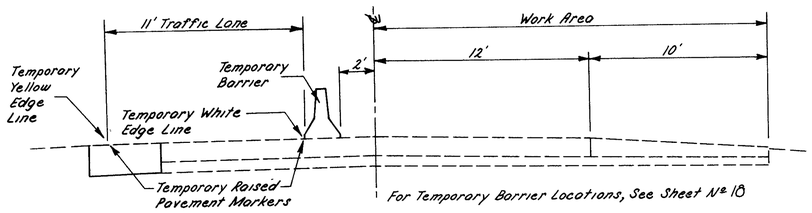
When Stage 3 is completed, the Contractor will direct traffic to the left-hand lane and shoulder, maintaining the 11 ft. width of the traveled lane by the use of pavement markings. The contractor will then complete paving operations in the right-hand lane, following the Ramp Details as in STAGE 2 (above).

STAGE 1



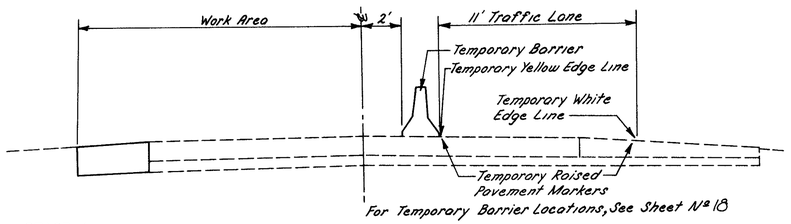
For Temporary Barrier Locations, See Sheet No 18

STAGE 2



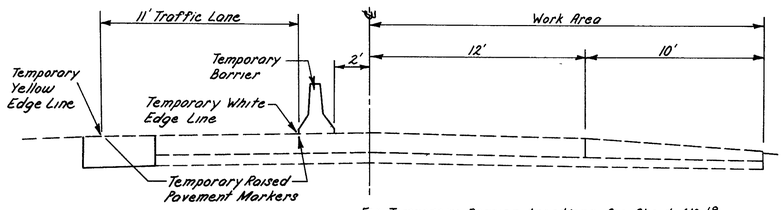
For Temporary Barrier Locations, See Sheet No 18

STAGE 3



For Temporary Barrier Locations, See Sheet No 18

STAGE 4

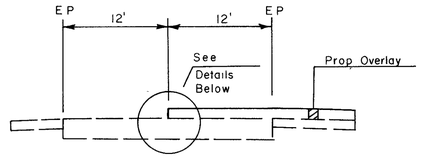


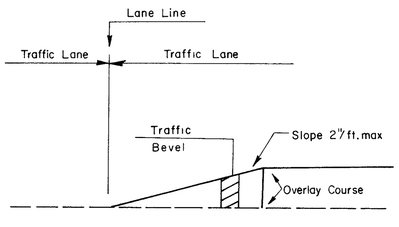
For Temporary Barrier Locations, See Sheet No 18

LONGITUDINAL JOINTS

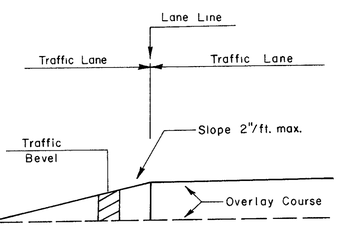
In any area where traffic is exposed to a longitudinal joint greater than 1 1/2" in depth, the contractor shall provide a bevel as detailed in these notes (TRAFFIC BEVEL DETAIL) to provide a smooth transition. The material used for the bevel shall be the same as used in the newly-placed surface course. The bevel may be constructed by planing, raking, separate placement, or any other method as approved by the Engineer. The traffic bevel shall be installed similar to either TRAFFIC BEVEL- Detail A or Detail B. In either case, the traffic bevel shall be removed prior to placement of the adjacent surface course. Payment for this work shall be included in ITEM 412 - Asphalt Concrete, MWS-60.

TRAFFIC BEVEL DETAILS





Traffic Bevel - Type B



Traffic Bevel - Type A

ITEM 615 - CLASS A TEMPORARY PAVEMENT

CLASS A TEMPORARY PAVEMENT will be used to strengthen the left shoulder for traffic use during STAGE 1 of construction on I-70.

The temporary pavement locations and quantity calculations are as follows:

SHEET	DIRECTION	STATION	TO STATION	LENGTH	AREA
28	Westbound	342+20	352+04.66	954.66'	424.3 S.Y.
28-29	Westbound	353+14.76	362+69.76	955.0'	424.4 S.Y.
29-30	Westbound	367+00	377+26.13	1026.13'	456.1 S.Y.
30-31	Westbound	378+25.37	387+50.37	955.0'	424.4 S.Y.
33-34	Westbound	426+00	439+55	1355.0'	602.2 S.Y.
42-43	Westbound	555+00	569+55	1455.0'	646.7 S.Y.
28	Eastbound	336+20	352+35.24	1615.24'	717.9 S.Y.
28-29	Eastbound	353+45.34	356+70.34	325.0'	144.4 S.Y.
29-30	Eastbound	360+70	377+74.63	1704.63'	757.6 S.Y.
30	Eastbound	378+73.87	381+98.87	325.0'	144.4 S.Y.
31-32	Eastbound	388+95	405+00	1605.0'	713.3 S.Y.
33-34	Eastbound	419+70	436+75	1705.0'	757.8 S.Y.
41-42	Eastbound	548+70	563+25	1455.0'	646.7 S.Y.
				TOTAL	6860.2 S.Y.

A total quantity of 6861 Sq. Yards has been carried to the General Summary.

GENERAL NOTES

1. THIRTEEN (13) DRUMS OR BARRICADES SHALL BE USED TO FORM THE LANE TRANSITION TAPER IN ADVANCE OF THE WORK AREA. FIVE (5) CHANNELIZING DEVICES SHALL BE USED TO FORM THE TAPER ON THE SHOULDER. CONES, DRUMS, OR BARRICADES SHALL BE SPACED AT 50 FOOT CENTERS FOR THE FIRST 1000 FEET OF THE WORK AREA AND AT A MAXIMUM OF 100 FEET FOR THE BALANCE OF THE WORK AREA. CONES MAY BE SUBSTITED FOR THE BARRICADES OR STEEL DRUMS FOR THE LANE CLOSURES DURING DAYLIGHT HOURS ONLY.
2. WHEN WORK IS BEING PERFORMED IN THE LANE ADJACENT TO THE MEDIAN ON A DIVIDED HIGHWAY, "OW-123-48" SIGNS SHALL BE SUBSTITUTED FOR "OW-122-48" SIGNS AND THE OW-60D SIGNS SHALL BE SUBSTITUTED FOR THE OW-60C SIGNS.
3. THE WORK TRUCK SHOWN AT THE BEGINNING OF THE WORK AREA SHALL BE IN PLACE AND UNOCCUPIED WHENEVER MEN ARE WORKING WITHIN THE WORK AREA. THIS TRUCK SHALL BE MOVED FROM THE PAVEMENT WHENEVER WORKMEN ARE NOT IN THE WORK AREA. OTHER PROTECTIVE DEVICES MAY BE USED IN LIEU OF THE WORK TRUCK SHOWN WHEN APPROVED BY THE ENGINEER.
4. TYPE C STEADY BURNING BARRICADE WARNING LIGHTS SHALL BE ERECTED ON DRUMS OR BARRICADES FOR NIGHT LANE CLOSURES. MAXIMUM SPACING SHALL BE 50' CENTER TO CENTER IN ADVANCE OF THE WORK AREA AND 200' CENTER TO CENTER WITHIN THE LIMITS OF THE WORK AREA.
5. TEMPORARY CONCRETE BARRIERS ALONG THE EDGE OF THE WORK AREA SHALL BE EQUIPPED WITH BARRIER REFLECTORS - SEE SHT. 217.
6. FOR ITEM 622 - TEMORARY CONCRETE BARRIER, BRIDGE MOUNTED DETAILS SEE SHEET 18A.

GENERAL NOTES

FHWA REGION	STATE	PROJECT	
5	OHIO		

145 / 219

MOT-70-06.53/11.02

REFERENCE shall be made to Standard Drawings

AS-1-81	dated	11-27-81	GR1	dated	1-11-85
DBR-2-73	dated	4-10-73	GR3	dated	10-25-90
SD-1-69	dated	6-12-69	BP5	dated	10-1-87
RB-1-55	dated	2-2-59	BR1	dated	5-29-79
EXJ-4-87	dated	1-5-89			

and to Supplemental Specifications:

			852	dated	6-10-87
845	dated	5-31-88	952	dated	12-14-88
			953	dated	8-21-80

DESIGN SPECIFICATIONS: The repairs to the structures shall conform to "Standard Specifications for Highways Bridges" adopted by the American Association of State Highway and Transportation Officals, 1983 including the 1984, 1985 & 1986 interim specifications and the Ohio "supplement" to these Specifications.

DESIGN DATA

Concrete Class S - Unit Stress 1500 p.s.i.

Concrete Class C - Unit Stress 1333 p.s.i.

Reinforcing Steel - ASTM A615, A616 or A617 - Grade 60 Unit Stress 24,000 p.s.i.

Structural Steel - ASTM A36 - unit stress 20,000 p.s.i.

EXISTING STRUCTURE VERIFICATION: Details and dimensions shown on these plans pertaining to the existing structure have been obtained from plans of the existing structure and/or from field observations and measurements. Consequently, they are indicative of the existing structure and the proposed work but they shall be considered tentative and approximate. The Contractor is referred to CMS Sections 102.05, 105.02 and 513.02.

Contract bid prices shall be based upon a recognition of the uncertainties described above and upon a prebid examination of the existing structure by the Contractor. However, all project work shall be based upon actual details and dimensions which have been verified by the Contractor in the field.

EXISTING REINFORCING STEEL: Where concrete is being removed and replaced, the existing reinforcing steel shall remain and be trimmed to provide the required clearance. Any existing reinforcing bars which are to be incorporated into the new work and which are made unusable by the Contractor's concrete removal operations shall be replaced with new steel at his cost. Any existing reinforcing bars deemed by the Engineer to be unusable because of corrosion shall be replaced with new steel. An allowance of 300lbs. of reinforcing steel has been included with the quantities for the pertinent structures and is to be used for the replacement of corroded steel.

UTILITY LINES: All expense involved in relocating the affected utility lines shall be borne by the Owner(s). The Contractor and Owner(s) are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to a minimum.

ITEM SPECIAL, SEALING OF CONCRETE SURFACES (SEE PROPOSAL NOTE): Specified concrete surfaces shall be sealed using either a silane or an epoxy sealer. See the proposal for surface preparation requirements, application rates, material requirements and application procedures. The surfaces to be sealed are shown on the plans.

ITEM SPECIAL, ABANDON SCUPPER: This item shall consist of plugging the pipe outlet at the Scupper and filling the Scupper with Class "C" Concrete. The price bid for this item shall be per each, and shall include all material, equipment, and labor necessary to complete the work.

ITEM 518 , SCUPPER MODIFICATION, Type B or type D: This item shall consist of modifying existing scuppers by adding steel bars to adjust the scuppers vertically to match the latex modified concrete overlay. This work shall be in accordance with Detail "B" or Detail "D" as shown on Sheet 146. Adequate measurements shall be made in the field to determine dimensions of the Scuppers and the number and spacing of Scupper bars. Price bid for this item shall be per each, and shall include all labor, materials and equipment necessary to complete this work.

ITEM SPECIAL, STEEL DRIP STRIP: After the deck is scarified and before the concrete is placed, a steel drip strip, as detailed, shall be installed along the full length of each side of the bridge. An additional strip 12" long U.N.O. shall be placed at each guardrail post. The strips shall be fastened at 3' c/c maximum (2 minimum for 12" long strips) with power driven pins or No. 10 galvanized screws and expansion anchors. Where splices are required, the individual pieces shall be butted tightly together, not lapped. Steel for galvanized strips shall be 0.105" thick and shall meet the requirements of ASTM A568 with galvanizing in accordance with 711.02. Stainless steel shall be 20 gauge ASTM A167, Type 304, mill finish. Payment shall be at the contract price bid for Item Special, Sq. Ft., Steel Drip Strip, and shall include all materials, labor, tools, and incidentals necessary to complete the Item.

ITEM 517, RAILING FACED, AS PER PLAN: The contractor shall carefully remove the existing aluminum railing and stack neatly along the right-of-way for subsequent pick-up by State forces. The concrete safety curb and the remaining vertical leg of the bulb angle which protrudes above the scarified deck shall be removed. 1" dia. holes, 6" or 12" deep(min.), shall be drilled at spacing as shown on the drawing. The holes shall be thoroughly cleaned of all dust and other deleterious material. Reinforcing bars shall be grout anchored as per SS852 and SS952 with the exception that the hole size shall be 1" dia.

All loose and unsound concrete in the area of the parapet to be faced, shall be removed. All remaining sound concrete shall then be mechanically scarified 1/4" deep. The minimum thickness for the proposed facing shall be 4". All resteel shall be epoxy coated as per 509. Epoxy coated resteel which is damaged due to cutting, bending, etc. shall be repaired as per 509. Concrete cover over all resteel shall be 2". The concrete surfaces to be faced shall be thoroughly drenched with clean water and allowed to dry to a damp condition just before placing the concrete.

The existing deflection joints shall be extended completely through the proposed facing and shall be made by forming or sawcutting the hardened concrete within 3 days after pouring. The 1/4" joints shall be sealed 3/4" deep (min.) with an inpregnated precompressed expanding foam sealant tape known as Will-Seal, manufactured by Illbruck/USA Inc., Minneapolis or a low density, closed cell, crosslinked ehtylene vinyl acetate foam known as Evazote 50, manufactured by Epoxy Industries, Inc., Ravena, New York.

Additional Materials shall be: Concrete as per 511, Class S
Reinforcing Steel as per 509

(All of the above work and relevant plan notes shall be included in the price bid for Item 517-LF-Railing Faced, as per plan; except curb removal shall be included in the price bid for Item 202-Portions of structures removed, and reinforcing steel shall be paid for under Item 509.

~~The work shall include the cost of all materials, labor, equipment, services, and incidentals necessary to remove and rebuild the bridge railing as shown on the plans. Railing shall be removed in sections as required to allow for the installation of the new concrete. Railing shall be reinstalled in the same location from which it was removed. Any damaged railing shall be replaced with new railing of the same type

ITEM SPECIAL—PATCHING CONCRETE BRIDGE DECK WITH QUICK SETTING CONCRETE

ITEM SPECIAL PATCHING CONCRETE BRIDGE DECK WITH QSC:

A. DESCRIPTION. THIS ITEM SHALL CONSIST OF FURNISHING THE NECESSARY LABOR, MATERIALS AND EQUIPMENT TO REPAIR CONCRETE BRIDGE DECK INCLUDING THE REMOVAL OF ALL LOOSE AND UNSOUND CONCRETE, BITUMINOUS PATCHES, SURFACE PREPARATION, BONDING COAT AND THE MIXING, PLACING, FINISHING, CURING AND SEALING (IF REQUIRED).

B. REMOVAL OF UNSOUND CONCRETE. THE ENGINEER SHALL SOUND THE ENTIRE DECK AND OUTLINE THE AREAS TO BE REMOVED. THE PERIMETER OF ALL REMOVAL AREAS SHALL BE SAWED TO A DEPTH OF 1 INCH TO PRODUCE A VERTICAL OR SLIGHTLY UNDERCUT FACE. ADDITIONAL SAW CUTS MAY BE REQUIRED TO FACILITATE REMOVAL. COOLING WATER FROM WET SAWING AND DUST FROM ANY DRY SAWING SHALL NOT BE ALLOWED TO CONTAMINATE THE EXPOSED PATCH HOLES. ALL UNSOUND CONCRETE INCLUDING ALL PATCHES OTHER THAN SOUND PORTLAND CEMENT CONCRETE, AND ALL OBVIOUSLY LOOSE AND DISINTEGRATED CONCRETE SHALL BE REMOVED. THE UNSOUND CONCRETE MAY BE REMOVED BY CHIPPING OR HAND DRESSING. CHIPPING HAMMERS SHALL NOT BE HEAVIER THAN THE NOMINAL 35-POUND CLASS AND SHALL BE OPERATED AT AN ANGLE OF LESS THAN 45 DEGREES MEASURED FROM THE SURFACE OF THE DECK. CONCRETE SHALL BE REMOVED IN SUCH A MANNER THAT PREVENTS CUTTING, ELONGATING OR DAMAGING REINFORCING STEEL. WHERE THE BOND BETWEEN THE CONCRETE AND A PRIMARY REINFORCING BAR HAS BEEN DESTROYED, OR WHERE MORE THAN ONE HALF OF THE PERIPHERY OF SUCH A BAR HAS BEEN EXPOSED. THE ADJACENT CONCRETE SHALL BE REMOVED TO A DEPTH THAT WILL PROVIDE A MINIMUM 3/4 INCH CLEARANCE AROUND THE BAR EXCEPT WHERE OTHER REINFORCING BARS MAKE THIS IMPRACTICAL. REINFORCING WHICH HAS BECOME LOOSE SHALL BE ADEQUATELY SUPPORTED AND TIED BACK INTO PLACE. AFTER COMPLETION OF THE SECONDARY REMOVAL OPERATIONS, THE ENGINEER WILL RE-SOUND THE DECK TO INSURE THAT ONLY SOUND CONCRETE REMAINS.

C. SURFACE PREPARATION. CLEANING SHALL CLOSELY PRECEDE APPLICATION OF THE BONDING GROUT AND/OR THE PATCHING MATERIAL. THE SURFACE TO BE PATCHED AND THE EXPOSED REINFORCING STEEL SHALL BE THOROUGHLY CLEANED WITHIN 24 HOURS PRIOR TO PATCHING BY ABRASIVE BLASTING FOLLOWED BY AN AIR BLAST. IT MAY BE NECESSARY TO USE HAND TOOLS TO REMOVE SCALE FROM THE REINFORCING STEEL.
CONTAMINATION OF THE AREA TO BE PATCHED BY CONSTRUCTION EQUIPMENT OR FROM ANY OTHER SOURCE SHALL BE PREVENTED BY PLACEMENT OF A CLEAN 4-MIL POLYETHYLENE SHEET (OR ANY OTHER COVERING AS APPROVED BY THE ENGINEER) ON THE SURFACE OF THE DECK FOLLOWING THE AIR BLAST CLEANING.
WHERE REINFORCING STEEL IS EXPOSED, THE CONTRACTOR SHALL PROVIDE ADEQUATE SUPPORTS FOR THE CONCRETE MIXER SO THAT REINFORCING STEEL AND ITS BOND WITH THE CONCRETE WILL NOT BE DAMAGED BY THE WEIGHT AND MOVEMENT OF THE CONCRETE MIXER, OR SHALL PROVIDE MEANS TO CONVEY CONCRETE FROM THE MIXER TO THE PATCH LOCATIONS. FOR PATCHES WHICH DO NOT USE WATER AS THE ACTIVATOR, THE PREPARED SURFACE SHALL BE LEFT IN THE CONDITION AS RECOMMENDED BY THE MANUFACTURER. ANY ADDITIONAL SURFACE PREPARATION SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS FOR THE PATCHING MATERIAL WHICH IS USED.

D. MATERIALS, PLACING AND CURING. THE DECK SHALL BE PATCHED WITH QUICK SET CONCRETE (QSC) WHICH SHALL CONFORM TO THE FOLLOWING REQUIREMENTS:

COARSE AGGREGATE (NO. 8)	703.02
QUICK SETTING CONCRETE MORTAR, TYPE 2	SS933
WATER	499.02

QSC PATCHES SHALL BE BONDED ACCORDING TO THE MANUFACTURER'S RECOMMENDATIONS. PROPORTIONING AND PLACING OF QSC PATCHES SHALL BE ACCORDING TO THE MANUFACTURER'S RECOMMENDATIONS. THE CONCRETE SHALL BE MIXED AND PLACED AS PER MANUFACTURER'S RECOMMENDATIONS WITH THE AMBIENT TEMPERATURE ABOVE 50 DEGREES F. COARSE AGGREGATE, WHICH HAS BEEN CLEANED, DRIED AND BAGGED, SHALL BE ADDED AT A RATE OF 30 POUNDS OF AGGREGATE PER 50 POUNDS OF DRY QSC MORTAR.

QSC PATCHES SHALL BE CURED FOR A MINIMUM OF TWO HOURS IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS. 3000 PSI COMPRESSIVE STRENGTH SHALL BE VERIFIED WITH A PROPERLY CALIBRATED IMPACT REBOUND HAMMER, PROVIDED BY THE CONTRACTOR, PRIOR TO OPENING TO TRAFFIC.
IMMEDIATELY FOLLOWING APPLICATION OF THE BONDING GROUT THE PATCHING MATERIAL SHALL BE PLACED, CONSOLIDATED AND FINISHED TO THE EXISTING GRADE ELEVATION. PATCHES EXCEEDING 50 SQUARE FEET SHALL BE LEVELED AND CONSOLIDATED WITH A MECHANICAL VIBRATING SCREED. SMALLER PATCHES SHALL BE HAND VIBRATED AND LEVELED WITH A TEN FOOT STRAIGHTEDGE.

E. FINISHING. AFTER THE PATCHES HAVE BEEN CONSOLIDATED AND FINISHED THEY SHALL BE TEXTURED IN ACCORDANCE WITH SECTION 451.09 OF THE CMS.

F. INSPECTION AND SOUNDING OF CONCRETE PATCHES. AFTER CURING AND BEFORE FINAL ACCEPTANCE, ALL PATCHED AREAS SHALL BE SOUNDED. ALL UNSOUND AREAS AND AREAS EXHIBITING CRACKING SHALL BE REMOVED AND REPATCHED ACCORDING TO THIS NOTE.
ALL SOUNDING AND REPLACEMENT OF REJECTED AREAS WILL BE THE RESPONSIBILITY OF THE CONTRACTOR AND INCLUDED IN THE UNIT BID PRICE FOR THIS ITEM.

G. SEALING PATCH EDGES. ALL JOINTS ALONG PATCH EDGES SHALL BE SEALED WITH AN APPROVED HIGH MOLECULAR WEIGHT METHACRYLATE SEALER ACCORDING TO THE MANUFACTURER'S RECOMMENDATIONS AND THE HMWM PROPOSAL NOTE (NO. 324-88). COST FOR SEALING SHALL BE INCLUDED WITH PATCHING WHEN A SEPARATE PAY ITEM FOR WEARING SURFACE SEALING IS NOT INCLUDED IN THE PLANS.

H. METHOD OF MEASUREMENT. THE QUANTITY SHALL BE THE ACTUAL AREA IN SQUARE YARDS OF THE EXPOSED SURFACE OF ALL PATCHES, IRRESPECTIVE OF THE DEPTH OF THE PATCH, COMPLETE, IN PLACE AND ACCEPTED.

I. BASIS OF PAYMENT. PAYMENT SHALL BE MADE AT THE CONTRACT BID PRICE FOR:

MOT-70-6.53/11.02

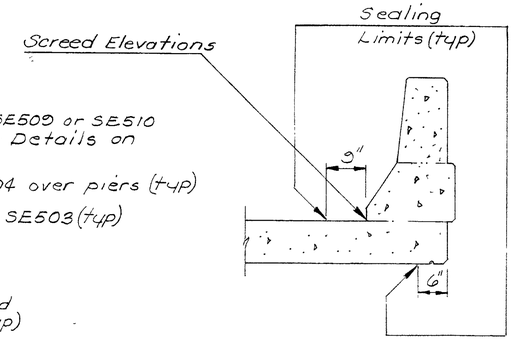
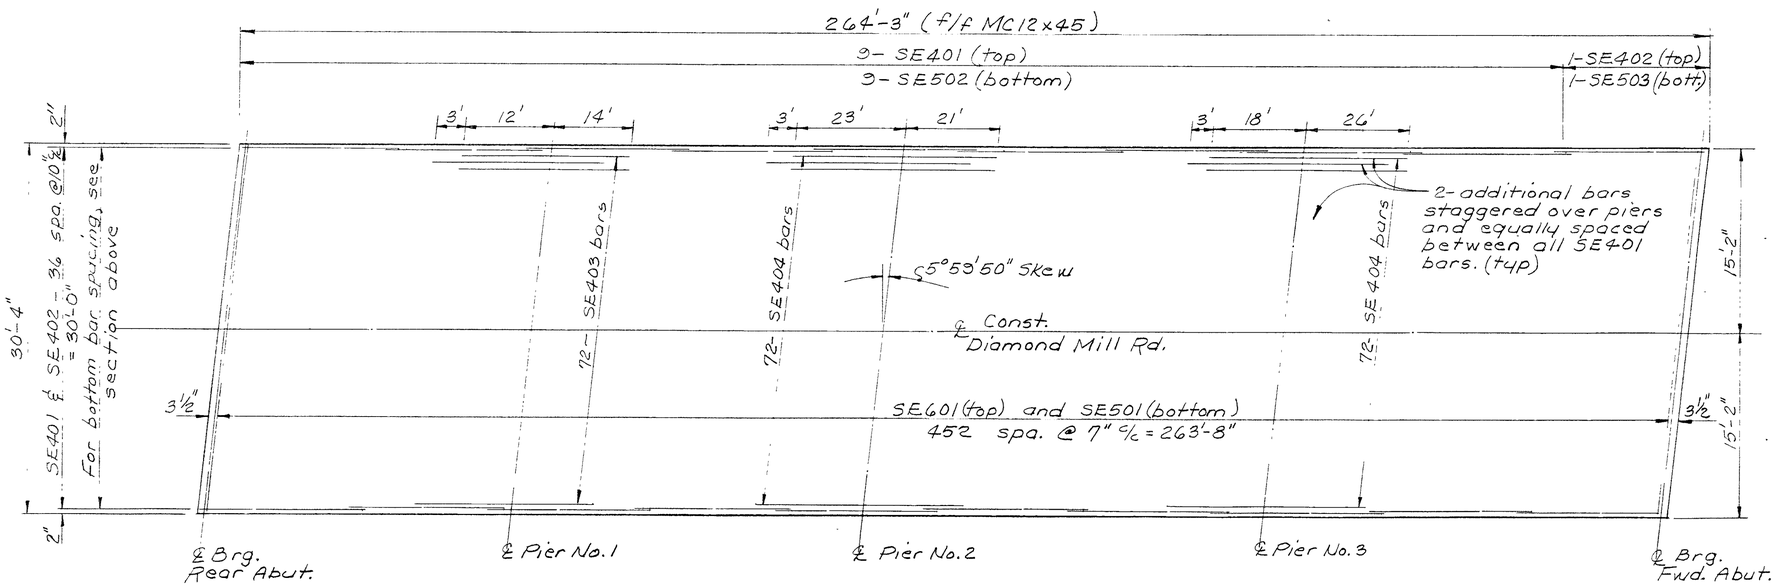
TRANSVERSE SECTION



PARAPET SEALING LIMITS



DECK REINFORCING PLAN
(All ⊙ laps to be 1'-8" min.)

⊙ Number 4 bars
Number 5 bars to lapped 2'-2" min.)

WELDED ATTACHMENT OF SUPPORTS FOR CONCRETE DECK FINISHING MACHINE MAY BE MADE TO AREAS OF THE FASCIA STRINGER FLANGES DESIGNATED "COMPRESSION". ATTACHMENTS SHALL NOT BE MADE TO AREAS DESIGNATED "TENSION". FILLET WELDS TO COMPRESSION FLANGES SHALL BE NOT CLOSER THAN 1" FROM EDGE OF FLANGE, BE NOT MORE THAN 2" LONG, AND BE NOT SMALLER THAN THE MINIMUM SIZE REQUIRED BY SECTION 2.7 OF THE AASHTO/AWS BRIDGE WELDING CODE.

⊛ A HAUNCH WIDTH OF 9" SHALL BE USED FOR COMPUTING QUANTITY OF CONCRETE. HOWEVER, THE HAUNCH WIDTH MAY VARY BETWEEN 6" AND 12" (PROVIDED THAT THE SLOPE SHALL BE NOT MORE THAN 1:4 FOR A HAUNCH LESS THAN 9" WIDTH.)

DECK SLAB DEPTH: THE DISTANCE SHOWN FROM TOP OF DECK SLAB TO TOP OF STEEL BEAM IS THE DESIGN DIMENSION. THE QUANTITY OF DECK CONCRETE TO BE PAID FOR SHALL BE BASED ON THIS DIMENSION, EVEN THOUGH DEVIATION FROM IT MAY BE NECESSARY BECAUSE THE TOP FLANGE OF THE BEAM MAY NOT HAVE THE EXACT CAMBER OR CONFORMATION REQUIRED TO PLACE IT PARALLEL TO THE FINISHED GRADE.

ITEM SPECIAL , SEALING OF CONCRETE SURFACES : DEFLECTOR PARAPETS SHALL BE SEALED WITH AN EPOXY SEALER. SEE THE PROPOSAL FOR SURFACE PREPARATION REQUIREMENTS, APPLICATION RATES, MATERIAL REQUIREMENTS AND APPLICATION PROCEDURES.

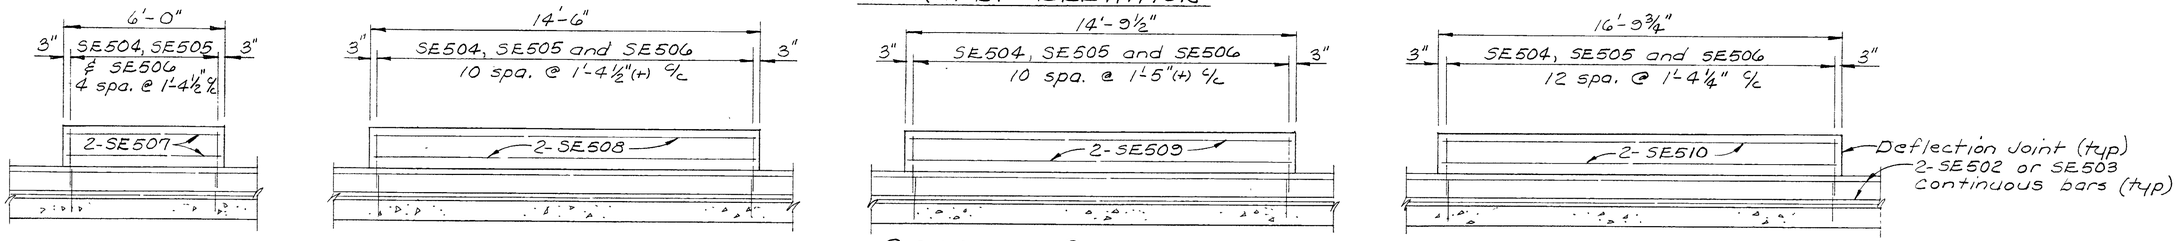
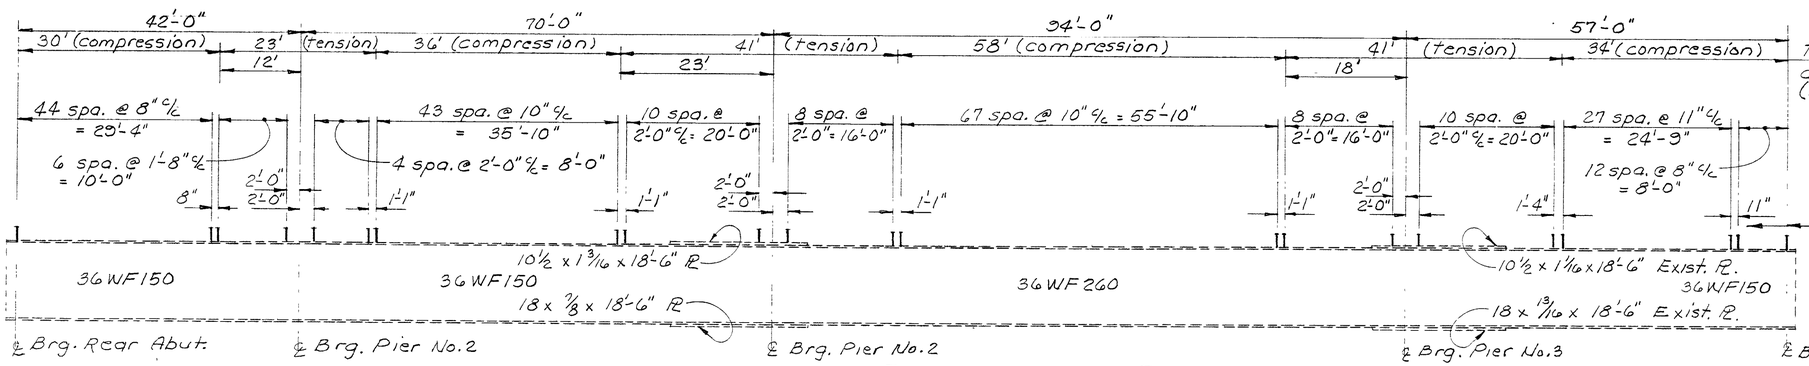
PARAPET ELEVATION

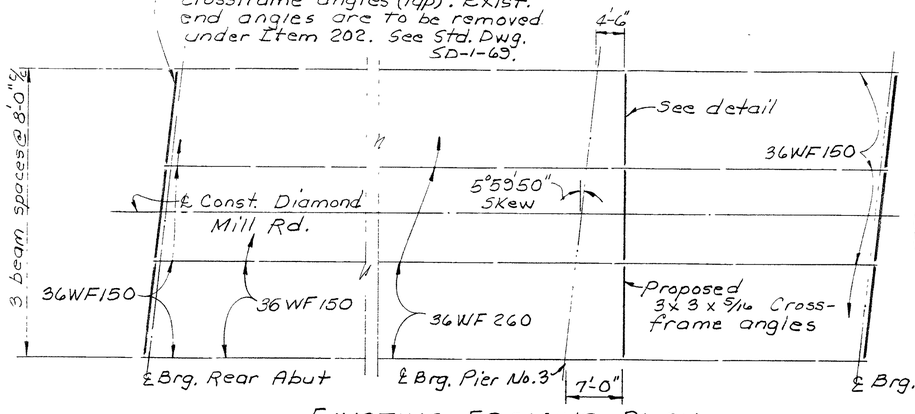


PARAPET PANELS

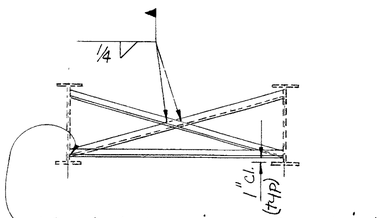


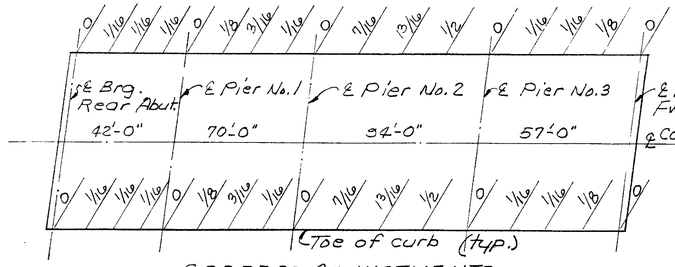
EXISTING BEAM ELEVATION

Vertical scale is exaggerated.
500 shear connectors are required per beam line.



EXISTING FRAMING PLAN
(Partial)





SCREED ADJUSTMENTS

Dimensions (in inches) are shown at the quarter points of each span. Screeds shall be adjusted upward by these amounts above the final deck profile due to deflection from the concrete deadload.

Screed Elevation = El. T/beam + slab depth over beam + Adjustment.

Quantities Carried To Bridge General Summary

PROPOSED WORK

1. Remove existing deck, Expansion Joint armor, Portions of Backwalls, Designated Areas of Wingwalls and Approach Slabs.
2. Patch Abutments as directed by the Engineer.
3. Install new X-Frame angles at Forward Pier and at Abutments.
4. Install new Expansion Joint systems at Abutments.
5. Complete New Deck, Parapets, Backwall and Wingwall modifications and new Approach Slabs.
6. Seal all Parapets and designated Pier Columns as shown on the plans.
7. Replace Guardrail as shown on Roadway Plans.
8. Paint all Structural Steel. (Color of finish coat shall be gray)
9. Diamond Mill Road shall be closed to traffic for a limited time period. For notes see sheet 16.
10. Other work as described in these plans.

ITEM 519 - PATCHING CONCRETE STRUCTURE
ESTIMATED AREAS TO BE PATCHED ARE AS FOLLOWS:

PROPOSED WORK

1. REMOVE ASPHALT FROM THE SUPERSTRUCTURE. REMOVE CURB & RAILING FROM SUPERSTRUCTURE & ABUTMENTS.
2. MODIFY & PATCH ABUTS. AS DIRECTED BY THE ENGINEER.
3. SCARIFY EXIST. DECK 1/4" & REMOVE DETERIORATED CONC. AS DIRECTED BY THE ENGINEER.
4. PERFORM PARTIAL & FULL DEPTH DECK REPAIR AND PLACE LATEX MODIFIED CONC. OVERLAY (1 1/4" THICK)
5. SEAL EDGE OF DECK.
6. SEAL JTS. AS NOTED.
7. ADD NEW DEEP BEAM RAILING TO BRIDGE & ABUTMENTS.
8. ONE LANE OF TRAFFIC SHALL BE MAINTAINED ON EACH BRIDGE AT ALL TIMES. FOR NOTES SEE SHT. 16.
9. OTHER WORK AS DESCRIBED IN THESE PLANS.

ITEM 519 - PATCHING CONCRETE STRUCTURE:

DECK REINFORCING PLAN

All #4 bar laps to be 1'-8" min.
All #5 bar laps to be 2'-2" min.

WELDED ATTACHMENT OF SUPPORTS FOR CONCRETE DECK FINISHING MACHINE MAY BE MADE TO AREAS OF THE FASCIA STRINGER FLANGES DESIGNATED "COMPRESSION". ATTACHMENTS SHALL NOT BE MADE TO AREAS DESIGNATED "TENSION". FILLET WELDS TO COMPRESSION FLANGES SHALL BE NOT CLOSER THAN 1" FROM EDGE OF FLANGE, BE NOT MORE THAN 2" LONG, AND BE NOT SMALLER THAN THE MINIMUM SIZE REQUIRED BY SECTION 2.7 OF THE AASHTO/AWS BRIDGE WELDING CODE.

⊕ A HAUNCH WIDTH OF 9" SHALL BE USED FOR COMPUTING QUANTITY OF CONCRETE. HOWEVER, THE HAUNCH WIDTH MAY VARY BETWEEN 6" AND 12" (PROVIDED THAT THE SLOPE SHALL BE NOT MORE THAN 1:4 FOR A HAUNCH LESS THAN 9" WIDTH.)

DECK SLAB DEPTH: THE DISTANCE SHOWN FROM TOP OF DECK SLAB TO TOP OF STEEL BEAM IS THE DESIGN DIMENSION. THE QUANTITY OF DECK CONCRETE TO BE PAID FOR SHALL BE BASED ON THIS DIMENSION, EVEN THOUGH DEVIATION FROM IT MAY BE NECESSARY BECAUSE THE TOP FLANGE OF THE BEAM MAY NOT HAVE THE EXACT CAMBER OR CONFORMATION REQUIRED TO PLACE IT PARALLEL TO THE FINISHED GRADE.

ITEM SPECIAL, SEALING OF CONCRETE SURFACES: DEFLECTOR PARAPETS SHALL BE SEALED AS PER DETAILS WITH AN EPOXY SEALER. SEE THE PROPOSAL FOR SURFACE PREPARATION REQUIREMENTS. APPLICATION RATES, MATERIAL REQUIREMENTS AND APPLICATION PROCEDURES.

LAMINATED ELASTOMERIC BEARINGS

TOLERANCES:
INDIVIDUAL ELASTOMER LAYER THICKNESS: ± 20% OF DESIGN VALUE NOT TO EXCEED ± 1/8"

PLAN DIMENSIONS	-0, +1/4"
DESIGN THICKNESS ≤ 11/4"	-0, +1/8"
DESIGN THICKNESS > 11/4"	-0, +1/4"
EDGE COVER OF EMBEDDED LAMINATES	-0, +1/8"

LOAD PLATE: THE STEEL LOAD PLATE SHALL BE BONDED BY VULCANIZATION TO THE ELASTOMER DURING THE MOLDING PROCESS. STEEL LOAD PLATES SHALL BE ONE AND ONE HALF INCH THICK MIN. FOR BEARINGS RATED UP TO AND INCLUDING 200 KIPS AND SHALL BE TWO INCHES THICK MIN. FOR BEARINGS RATED OVER 200 KIPS.
WELDING OF THE LOAD PLATE TO THE SUPERSTRUCTURE SHALL BE CONTROLLED SO THAT THE PLATE TEMPERATURE AT THE ELASTOMER BONDED SURFACE SHALL NOT EXCEED 400°F AS DETERMINED BY THE USE OF PYROMETRIC STICKS OR OTHER TEMPERATURE MONITORING DEVICES.

BEARING REPOSITIONING : IF DECK CONCRETE IS PLACED AT AN AMBIENT TEMPERATURE HIGHER THAN 80°F OR LOWER THAN 40°F, AND THE BEARING SHEAR DEFLECTION EXCEEDS ONE-SIXTH OF THE BEARING HEIGHT AT 60°F ± 10°F, THE BEAMS OR GIRDERS SHALL BE RAISED TO ALLOW THE BEARINGS TO RETURN TO THEIR UNDEFORMED SHAPE AT 60°F ± 10°F.

STEEL DESIGNATION: THE STEEL LOAD PLATE SHALL BE A36 STEEL

BASIS OF PAYMENT: THE UNIT BID PRICE SHALL INCLUDE ALL MATERIALS, LABOR AND INCIDENTALS NECESSARY TO FURNISH AND INSTALL LAMINATED ELASTOMERIC BEARINGS EITHER FIXED OR EXPANSION. PAYMENT WILL BE MADE AT THE CONTRACT PRICE BID FOR ITEM 516, EACH, LAMINATED ELASTOMERIC BEARINGS (SEE ESTIMATED QUANTITIES)

ELASTOMERIC TEST PAD: THE ELASTOMERIC BEARING MANUFACTURER SHALL SUPPLY A PLAIN ELASTOMERIC PAD FOR TESTING PURPOSES. THE PAD SHALL BE FURNISHED FROM THE SAME BATCH OF NEOPRENE THAT IS USED IN THE FABRICATION OF THE LAMINATED ELASTOMERIC BEARINGS AND THE FABRICATOR SHALL CERTIFY THE IDENTITY OF THE ELASTOMER. THE PAD SHALL HAVE A 1/2" THICKNESS AND SHALL HAVE MINIMUM LENGTH AND WIDTH DIMENSIONS OF 6 INCHES.

PAYMENT FOR THE TEST PAD WILL BE INCLUDED IN THE BID PRICE FOR THE BEARING.

Quantities Carried To Bridge General Summary

PROPOSED WORK

1. Remove existing deck, all structural steel, bearings, approach slabs, portions of abutment backwalls and designated areas of wingwalls.
2. Patch abutments as directed by the Engineer and install bearing seat modifications at abutments and Piers. Contractor shall provide for the bridge to have 16'-3" min vertical clearance when the overlay is placed on I-70
3. Install new bearings and erect new structural steel.
4. Install new expansion joint systems at abutments.
5. Complete new deck, parapets, backwalls and wingwall modifications and new approach slabs.
6. Seal all parapets, designated areas of abutments and designated pier columns as shown on the plans.
7. Paint Structural Steel; Color Gray
8. Replace Guardrail as shown on Roadway Plans.
9. Complete other work as described in these plans
10. Crestway Dr shall be closed to traffic for a limited time period. For notes, see sheet 16.

ITEM 519 - Patching Concrete Structures
Estimated areas to be patched are as follows:

Abutment Seats	20 Sq Ft.
North West Corner Wingwall	5 Sq. Ft
TOTAL =	25 Sq Ft.

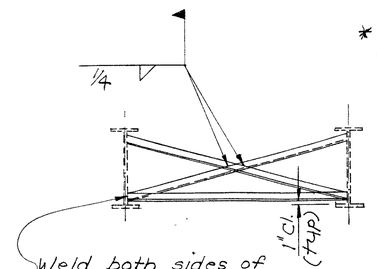
Proposed 4x4x5/16 end cross-frame angles (typ). Existing end crossframes to be removed under Item 202. See Std. Dwg. SD-1-69.

Proposed intermediate cross-frames (3x3x5/16 angles) near ℄ of each pier. Do not locate any angle leg closer than 3" to the exist web weld.

WELDED ATTACHMENT OF SUPPORTS FOR CONCRETE DECK FINISHING MACHINE MAY BE MADE TO AREAS OF THE FASCIA STRINGER FLANGES DESIGNATED "COMPRESSION". ATTACHMENTS SHALL NOT BE MADE TO AREAS DESIGNATED "TENSION". FILLET WELDS TO COMPRESSION FLANGES SHALL BE NOT CLOSER THAN 1" FROM EDGE OF FLANGE, BE NOT MORE THAN 2" LONG, AND BE NOT SMALLER THAN THE MINIMUM SIZE REQUIRED BY SECTION 2.7 OF THE AASHTO LAWS BRIDGE WELDING CODE.



Weld both sides of vertical legs and top side of horizontal legs with ¼" continuous fillet weld. (typ)

PROPOSED WORK

1. Remove Existing Deck, Abutment Backwalls, Expansion Joint Armor and designated areas of Wingwalls. The Contractor shall be careful when sawing the Existing Concrete Deck so that the sawing operation will stay clear of the top flange and top cover plates of the existing beams. See sheet 3/5 for the top cover plate locations
2. Jack Superstructure at Piers and Abutments 1'-9" min (using temporary supports and longitudinal blocking and installing concrete pedestals). Contractor shall provide for the bridge to have 16'-3" min. vertical clearance when the overlay is placed on I-70. See sheet 146 for Pier Pedestal details.
3. Install New X-Frame Angles at Piers and Abutments.
4. Patch Abuts. & Piers as directed by the Engineer, and Realign Abut Rocker Bearings to be vertical.
5. Install New Expansion Joint Systems at Abutments. Seal Parapets as shown on plans.
6. Complete New Deck, Parapets, Backwalls and Wingwall modifications.
7. Seal all Parapets and designated Pier Columns as shown on plans.
8. Paint Structural Steel as indicated by Plan Note. The color of the finish paint shall be gray
9. Hoke Road shall be closed to traffic for a limited time period. For Notes, see Sheet 16.
10. Other work as described in these Plans.

ITEM 519 - Patching Concrete Structures
Estimated areas to be patched are as follows:

Abutment Seats	30 Sq Ft
Pier Columns	20 Sq Ft.
	50 Sq. Ft.

VARIES FROM 3'-10" TO 3'-8" BY 1/2" (FIVE BARS PER SERIES).

LETTER 'E' IN PREFIX INDICATES EPOXY COATED REINF. STEEL.
* BEND IN FIELD AS REQUIRED.
** SMOOTH DOWEL BAR

PROPOSED WORK

1. REMOVE ASPHALT FROM SUPERSTRUCTURE & BACKWALL.
2. JACK SUPERSTRUCTURE AT PIERS & ABUTMENTS 1'-9 3/4" MIN. (USING TEMPORARY SUPPORTS & LONGITUDINAL BLOCKING AND INSTALLING CONCRETE PEDESTALS). CONTRACTOR SHALL PROVIDE FOR THE BRIDGE TO HAVE 16'-3" MIN. VERT. CLEARANCE WHEN THE OVERLAY IS PLACED ON I-70.
3. REMOVE ABUTMENT PORTIONS OF END DAM & TOP OF ABUTMENT BACKWALL. CLEAN & REPOSITION ABUTMENT PORTIONS OF END DAMS. ADD EXTENSIONS TO END DAM WITH PARAPET CURB TYPE'S FOR ROADWAY WIDENING AT 4 LOCATIONS AFTER EXIST. SAFETY CURB HAS BEEN REMOVED.
4. PATCH ABUTS. AS DIRECTED BY THE ENGINEER, AND REALIGN ABUT BEARINGS.
5. MODIFY PARAPETS ON THE SUPERSTRUCTURE & ABUTMENTS. SEAL PARAPETS AS SHOWN ON PLANS.
6. SCARIFY EXIST. DECK 1/4" & REMOVE DETERIORATED CONCRETE AS DIRECTED BY THE ENGINEER.
7. PERFORM PARTIAL AND FULL DEPTH DECK REPAIR AND PLACE L.M.C.O. (1 1/4" THICK).
8. SEAL JTS. AS NOTED.
9. UNION RD. SHALL BE CLOSED TO TRAFFIC FOR A LIMITED TIME PERIOD. FOR NOTES SEE SHT. 16.
10. OTHER WORK AS DESCRIBED IN THESE PLANS.

GENERAL NOTES (FOR ADDITIONAL NOTES SEE SHT. 145)

FHWA REGION	STATE	PROJECT	
5	OHIO		

MOT-70-06.53/11.02

EMBANKMENT CONSTRUCTION: The embankment shall be constructed to the level of the subgrade in the area of the proposed abutment widening. Excavation may then be made for the abutments.

ITEM 503, UNCLASSIFIED EXCAVATION, AS PER PLAN: After the embankment has been constructed in the area of the abutment and excavation for the abutment has been performed, contractor shall compact the existing soil under the proposed footer. Compaction shall meet the requirements of section 203.13 for a depth of 12" below the bottom of footer. Granular backfill meeting the requirements of Item 304 shall be used, if required, to maintain the footing elevation.

PILE DESIGN LOAD: Piers - 35 tons per pile.

FOUNDATION BEARING PRESSURE: Abutment footings, as designed, produce a maximum bearing pressure of 2 tons per sq.ft..

PILE POINTS: Steel pile points shall be used to protect the tips of the proposed piling. The steel points shall be furnished by the Associated Pile and Fitting Corp., 262 Rutherford Blvd., Clifton, New Jersey 07014; International Construction Equipment Inc., 301 Warehouse Dr., Matthews, North Carolina 28016; Dougherty Foundation Products Inc., P.O. Box 688, Franklin Lakes, New Jersey 07417; Versa Steel Inc., 3601 N.W. Yeon Ave., P.O. Box 10559, Portland, Oregon 97210 or by a manufacturer that can furnish a steel point that is acceptable to the Director. The pile points shall satisfy or exceed the requirements of ASTM A27 (Grade 65/30) or ASTM A148 (Grade 90/60).

ITEM 845, LATEX MODIFIED CONCRETE OVERLAY(1 1/4"),AS PER PLAN: ~~Scarification of the concrete surface as per section 845.05 shall not apply to the proposed concrete deck in the widened areas. However, the proposed concrete deck surface shall be given a rough surface satisfactory to the Engineer. The surface shall be textured in the longitudinal direction by an approved device that will produce a relatively uniform pattern of grooves. The grooves shall be approx. 1/4" deep x 1/4" wide spaced at approx. 5/8" c/c.~~

The proposal note entitled "LATEX MODIFIED CONCRETE (LMC) OVERLAY OF NEW CONCRETE BRIDGE DECKS" SHALL apply to this item.

ITEM 518, SCUPPERS, INCLUDING SUPPORTS, / AS PER PLAN: Shall be in accordance with Std. Dwg. SD-1-69 except that scupper pipes shall extend 1'-6" below the bottom of beam instead of 2".

MAINTENANCE OF TRAFFIC:

S.R. 48 - Maintain two lanes of traffic Southbound and one lane Northbound at all times.

I-70 - Westbound - Maintain one thru lane and ramp lane at all times.

Eastbound - Maintain one thru lane at all times.

For additional maintenance of traffic notes & details see roadway plans.

The contractor shall safeguard the traveling public on S.R. 48 by providing platforms, nets, or other suitable protection above the traveled lanes.

ITEM 513, STRUCTURAL STEEL, ASTM A36(AISC CATEGORY I) FOR REHABILITATION, AS PER PLAN; AND ITEM 516, STRUCTURAL STEEL FOR EXPANSION JT. REHABILITATION, AS PER PLAN: Structural Steel under these items will not require shop drawings prior to fabrication. The contractor shall make necessary measurements and prepare sketches, drawings, tables etc. The Engineer shall have the authority and responsibility for ensuring that the fabricated steel is acceptable. Technical assistance will be provided on request by the Bureau of Bridges. Mill test reports and shipping documents shall be submitted to the Engineer for review and approval prior to incorporating steel items into the work, as required by 501.07. After fabrication the Contractor shall submit shop drawings to the Engineer for review and approval to ensure that the drawings depict the steel as actually incorporated into the work. The Engineer will then send one approved set to the Bureau of Bridges for information. Pay weights shall be computed in compliance with 513 of the Construction and Material Specifications and submitted to the Engineer for his review and approval. The fabricator shall furnish a 35 mm microfilm copy of each shop drawing, which shall be mounted on an aperture card as specified in 501.05.

SPECIAL, FIELD PAINTING OF NEW STEEL, SYSTEM IZEU, : All painted areas of the existing structure that are damaged by removing existing signs, conduits, and areas disturbed by new construction (welding, erecting forms, etc.) shall be given one coat of primer(708.17) & one finish coat(708.18). Cost of the above shall be included in the price bid for SPECIAL, Field Painting of New Steel, System IZEU (BRIDGE No MOT-70-1130 L/R)

The color of the finish coat of paint for the new steel shall be green.

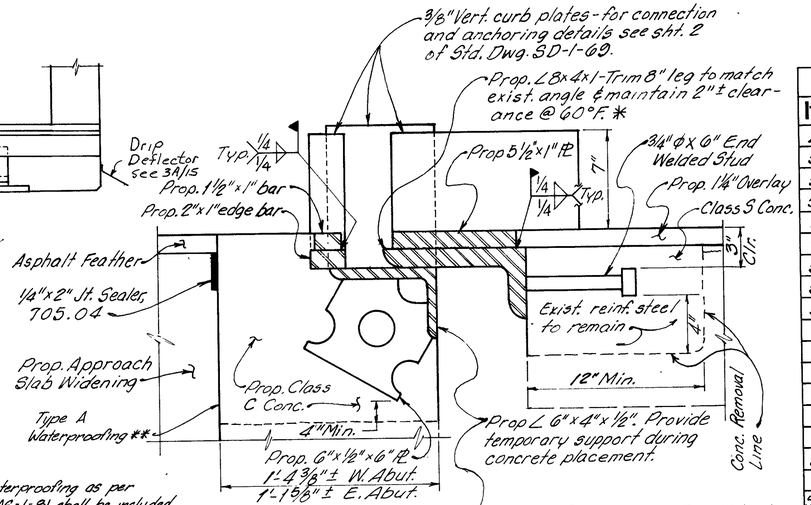
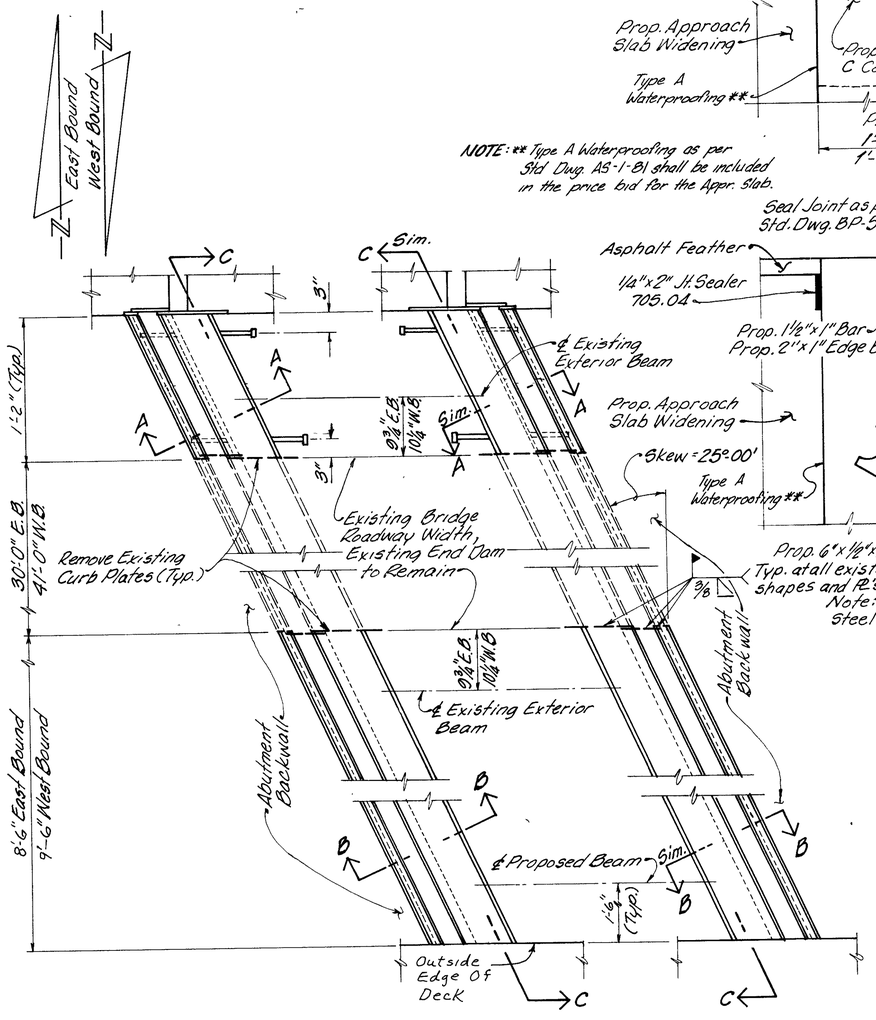
SECTION C-C

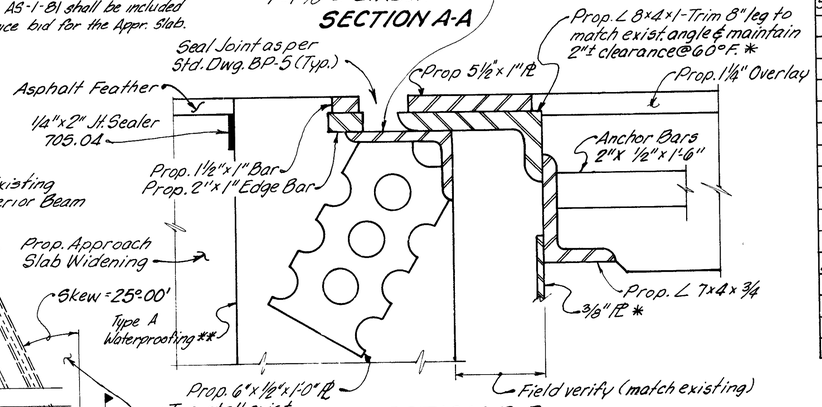


SECTION A-A

NOTE: ** Type A Waterproofing as per Std. Dwg. AS-1-81 shall be included in the price bid for the Appr. Slab.

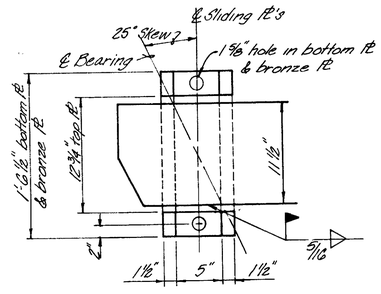


PLAN
END DAM

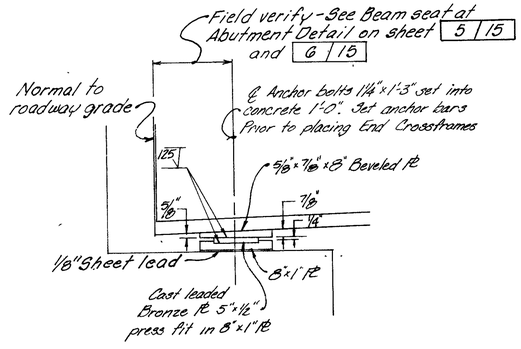


SECTION B-B

Note: * Cost to be included in Item 516, Structural Steel for Expansion Joint.



PLAN



ELEVATION

SLIDING PL BEARING DETAIL

NOTES:
1. For details not shown see Std. Dwg. SD-1-69.
2. Payment for End Dam shall be by Item 516, Structural Steel for Expansion Joint Rehabilitation, as per plan.

ESTIMATED QUANTITIES

Item	Total	Unit	DESCRIPTION	Super	Abut	Pier	Gen
202	Lump		Portions of Structure Removed				L.S.
503	116	C.Y.	Unclassified Excavation, As Per Plan		116		
503	65	C.Y.	Unclassified Excavation			65	
505	Lump		Pile Driving Equipment Mobilization			L.S.	
507	504	L.F.	Steel Piles HP 12x53			504	
507	24	Each	Steel Point, As Per Plan			24	
509	5555	Lb.	Reinforcing Steel, Grade 60		1577	3378	600
510	76	Each	Dowel Holes		76		
511	797	C.Y.	Class S Concrete, Superstructure	797			
511	42.8	C.Y.	Class S Concrete, Superstructure, Barrier Parapet Railing	40.5	2.3		
511	43.1	C.Y.	Class C Concrete, Footing		18.2	24.9	
511	20.3	C.Y.	Class C Concrete, Pier Above Footings			20.3	
511	39.1	C.Y.	Class C Concrete, Abutment Above Footing		39.1		
513	55,000	Lb.	Structural Steel, ASTM A36 (A1SC Category I) for Rehabilitation As Per Plan	55,000			
Special	Lump		Field Painting of New Steel, System IZEU (BRIDGE No. MOT-70-1130 L/R) (SEE PROPOSAL NOTE)				
516	5550	Lb.	Structural Steel for Expansion Joint Rehabilitation, As Per Plan	5550			
516	1520	Lb.	Bearing Devices, Modified As Per Plan	1520			
516	46	L.F.	Joint Sealer, 705.04, AS PER PLAN				46
517	365	L.F.	Railing Faced, As Per Plan	365			
518	41	C.Y.	Porous Backfill		41		
518	13	Each	Scuppers, Including Supports, As Per Plan	13			
518	70	L.F.	6" Perforated Helical C.S.P., 707.01		70		
518	47	L.F.	6" Non-perforated Helical C.S.P., Including Specials, 707.01		47		
509	44871	Lb.	Epoxy Coated Reinforcing Steel, Grade 60	34685	1673	8513	
845	372	S.Y.	Latex Modified Concrete Overlay, 1¼", AS PER PLAN	372			
Special	802	S.Y.	Sealing of Concrete Surfaces, See Proposal Note	434	14	354	
Special	19	Each	Abandon Scupper	19			
518	14	Each	Scupper, VERTICAL EXTENSION, AS PER PLAN	14

STEEL FRAMING PLAN

NOTES:

- For B150 Bolster Bearings See Std. Dwg. RB-1-98 And Load Plate Modification This Sheet.
- For Sliding Plate Details See Sheet 4 / 15
- For Intermediate Crossframes See Sheet 11 / 15
- For End Dam Details See Sheet 4 / 15
- For Beam Splice Details See Sheet 10 / 15
- Payment for Structural Steel shall be by Item 513 Structural Steel, ASTM A36 (Category I) for rehabilitation, as per plan.
- Welded Attachment of supports for concrete deck finishing machine may be made to areas of the stringer flanges designated "Compression." Attachments shall not be made to areas designated "Tension." Fillet welds to compression flanges shall not be closer than 1" from edge of flange, be not more than 2" long, and be not smaller than the minimum size required by AASHTO/A.W.S.

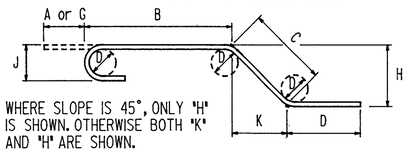
MOT-70-06.53/11.02

193 / 219



WHERE SLOPE IS 45°, ONLY "H" IS SHOWN. OTHERWISE BOTH "K" AND "H" ARE SHOWN.

TYPICAL BAR BENDING DETAILS

NOTES

1. BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED, AND THE FIRST TWO DIGITS WHERE FOUR DIGITS ARE USED INDICATE THE BAR SIZE NUMBERS. FOR EXAMPLE A-601 IS A NO.6 SIZE BAR AND A P-1004 IS A NO.10 SIZE BAR.
2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. RADIUS DIMENSION "R" IS TO OUTSIDE OF BAR. RADIUS DIMENSION "I.R." IS TO INSIDE OF BAR.
4. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
5. FOR STANDARD HOOK DIMENSIONS, SEE SECTION 509.05 OF THE SPECIFICATIONS.
6. DIMENSION ON HOOK IS SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOKSIZE.
7. EPOXY COATED REINFORCING STEEL IS INDICATED BY THE LETTER "E" IN THE BAR MARK PREFIX.
8. REINFORCING STEEL SAMPLES
   REFER TO CMS SECTIONS 106.03, 700, 709.01 THRU 709.05 AND 705.08. SUFFICIENT ADDITIONAL REINFORCING STEEL SHALL BE PROVIDED FOR SAMPLING. RANDOM SAMPLES SHALL BE REPLACED IN THE STRUCTURES BY THE ADDITIONAL STEEL, SPLICED IN ACCORDANCE WITH 509.08.
9. FOR THE BAR TYPE 16, THE NO. OF TURNS "A" IS THE LENGTH "B" DIVIDED BY THE PITCH "C", PLUS 3 TURNS (TOTAL NO. OF CLOSED COILS), EXPRESSSED AS THE NEAREST WHOLE NO.. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH UNIT.
10. FOUR STEEL CHANNEL TEE OR ANGLE SPACERS, WEIGHING APPROXIMATELY 0.80 LBS. PER LIN. FT. OF SPACER, SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE SPACED EQUALLY ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF FOUR SPACERS, BASED ON 0.80 LBS PER LIN. FT., WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY FOR SPIRAL BAR.

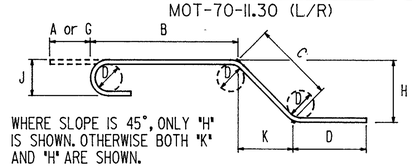
MOT-70-11.30 (L/R)



WHERE SLOPE IS 45°, ONLY "H" IS SHOWN. OTHERWISE BOTH "K" AND "H" ARE SHOWN.

TYPICAL BAR BENDING DETAILS

NOTES

1. BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED, AND THE FIRST TWO DIGITS WHERE FOUR DIGITS ARE USED INDICATE THE BAR SIZE NUMBERS. FOR EXAMPLE A-601 IS A NO.6 SIZE BAR AND A P-1004 IS A NO.10 SIZE BAR.
2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. RADIUS DIMENSION "R" IS TO OUTSIDE OF BAR. RADIUS DIMENSION "I.R." IS TO INSIDE OF BAR.
4. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
5. FOR STANDARD HOOK DIMENSIONS, SEE SECTION 509.05 OF THE SPECIFICATIONS.
6. DIMENSION ON HOOK IS SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOKSIZE.
7. EPOXY COATED REINFORCING STEEL IS INDICATED BY THE LETTER "E" IN THE BAR MARK PREFIX.
8. REINFORCING STEEL SAMPLES
   REFER TO CMS SECTIONS 106.03, 700, 709.01 THRU 709.05 AND 705.08. SUFFICIENT ADDITIONAL REINFORCING STEEL SHALL BE PROVIDED FOR SAMPLING. RANDOM SAMPLES SHALL BE REPLACED IN THE STRUCTURES BY THE ADDITIONAL STEEL, SPLICED IN ACCORDANCE WITH 509.08.
9. FOR THE BAR TYPE 16, THE NO. OF TURNS "A" IS THE LENGTH "B" DIVIDED BY THE PITCH "C", PLUS 3 TURNS (TOTAL NO. OF CLOSED COILS), EXPRESSSED AS THE NEAREST WHOLE NO.. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH UNIT.
10. FOUR STEEL CHANNEL TEE OR ANGLE SPACERS, WEIGHING APPROXIMATELY 0.80 LBS. PER LIN. FT. OF SPACER, SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE SPACED EQUALLY ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF FOUR SPACERS, BASED ON 0.80 LBS PER LIN. FT., WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY FOR SPIRAL BAR.

** BEND IN FIELD AS REQUIRED.

PROPOSED WORK

1. REMOVE ASPHALT FROM THE SUPERSTRUCTURE.
2. ~~PATCH ABUTMENT CORNERS AS DIRECTED BY THE ENGINEER.~~
2. MODIFY PARAPETS ON THE SUPERSTRUCTURE. SEAL PARAPETS AS SHOWN ON PLANS.
3. SCARIFY EXISTING DECK 1/4", AND REMOVE DETERIORATED CONCRETE AS DIRECTED BY THE ENGINEER.
4. PERFORM PARTIAL DEPTH AND FULL DEPTH DECK REPAIR AND PLACE LATEX MODIFIED CONCRETE OVERLAY (1 1/4" THICK).
5. SEAL JOINTS AS NOTED.
6. REPLACE GUARDRAIL AS SHOWN ON ROADWAY PLANS.
7. ONE LANE OF TRAFFIC SHALL BE MAINTAINED ON EACH BRIDGE AT ALL TIMES. FOR NOTES SEE SHEET 16.
8. OTHER WORK AS DESCRIBED IN THESE PLANS.

GENERAL NOTES (FOR ADDITIONAL NOTES SEE SHT. 145)

FHWA REGION	STATE	PROJECT	
5	OHIO		

MOT-70-06.53/11.02

202/219

EMBANKMENT CONSTRUCTION: The embankment shall be constructed to the level of the subgrade in the area of the proposed abutment widening. Excavation may then be made for the abutments.

PILE HAMMER: The pile hammer used to install the cast-in-place reinforced concrete piles shall have a State's Energy Rating of not less than 16,000 foot pounds. This requirement does not relieve the contractor from 108.05 which states that the contactor is to provide sufficient equipment for prosecuting the required work, refer to "ODOT'S Manual Of Procedures for Structures" to obtain the State's Energy Rating.

PILE WALL THICKNESS: The cast-in-place reinforced concrete piles shall have a wall thickness that is not less than 0.200 inches. The actual pile gage chosen is the responsibility of the contractor.

PILE DESIGN LOAD: Abutments - 35 tons per pile.
Piers - 40 tons per pile.

ITEM 845, LATEX MODIFIED CONCRETE OVERLAY(1 1/4"),AS PER PLAN: Scarification of the concrete surface as per section 845.05 shall not apply to the proposed concrete deck in the widened areas. However, the proposed concrete deck surface shall be given a rough surface satisfactory to the Engineer. The surface shall be textured in the transverse direction by an approved device that will produce a relatively uniform pattern of grooves. The grooves shall be approx. 1/4" deep x 1/4" wide spaced at approx. 5/8" c/c.

The proposal note entitled "Latex Modified Concrete (LMC) overlay of New Concrete Bridge Decks" shall apply to this item.

ITEM 518, SCUPPERS, INCLUDING SUPPORTS, AS PER PLAN: Shall be in accordance with Std. Dwg. SD-1-69 except that scupper pipes shall extend 1'-6" below the bottom of slab.

MAINTENANCE OF TRAFFIC:
Frederick Pike shall be closed to traffic for the minimum time required for widening the structure. Road closures shall conform to "The Manual."

I-70 - Maintain one lane of traffic on each bridge at all times.

For additional maintenance of traffic notes & details see roadway plans.

ESTIMATED QUANTITIES

Item	Total	Unit	DESCRIPTION	Super	Abut	Pier	Gen

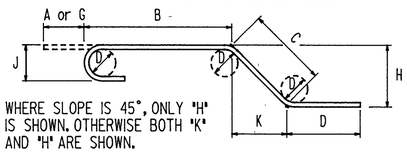
MOT-70-06.53/11.02

209 / 219



TYPICAL BAR BENDING DETAILS

NOTES

1. BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED, AND THE FIRST TWO DIGITS WHERE FOUR DIGITS ARE USED INDICATE THE BAR SIZE NUMBERS. FOR EXAMPLE A-601 IS A NO.6 SIZE BAR AND A P-1004 IS A NO.10 SIZE BAR.
2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. RADIUS DIMENSION "R" IS TO OUTSIDE OF BAR. RADIUS DIMENSION "I.R." IS TO INSIDE OF BAR.
4. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
5. FOR STANDARD HOOK DIMENSIONS, SEE SECTION 509.05 OF THE SPECIFICATIONS.
6. DIMENSION ON HOOK IS SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOKSIZE.
7. EPOXY COATED REINFORCING STEEL IS INDICATED BY THE LETTER "E" IN THE BAR MARK PREFIX.
8. REINFORCING STEEL SAMPLES
   REFER TO CMS SECTIONS 106.03, 700, 709.01 THRU 709.05 AND 705.08. SUFFICIENT ADDITIONAL REINFORCING STEEL SHALL BE PROVIDED FOR SAMPLING. RANDOM SAMPLES SHALL BE REPLACED IN THE STRUCTURES BY THE ADDITIONAL STEEL, SPLICED IN ACCORDANCE WITH 509.08.
9. FOR THE BAR TYPE 16, THE NO. OF TURNS "A" IS THE LENGTH "B" DIVIDED BY THE PITCH "C", PLUS 3 TURNS (TOTAL NO. OF CLOSED COILS), EXPRESSSED AS THE NEAREST WHOLE NO.. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH UNIT.
10. FOUR STEEL CHANNEL TEE OR ANGLE SPACERS, WEIGHING APPROXIMATELY 0.80 LBS. PER LIN. FT. OF SPACER, SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE SPACED EQUALLY ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF FOUR SPACERS, BASED ON 0.80 LBS PER LIN. FT., WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY FOR SPIRAL BAR.

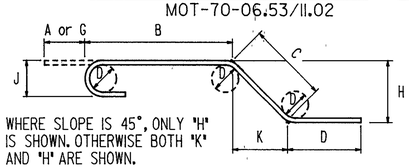
MOT-70-06.53/11.02



TYPICAL BAR BENDING DETAILS

NOTES

1. BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED, AND THE FIRST TWO DIGITS WHERE FOUR DIGITS ARE USED INDICATE THE BAR SIZE NUMBERS. FOR EXAMPLE A-601 IS A NO.6 SIZE BAR AND A P-1004 IS A NO.10 SIZE BAR.
2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. RADIUS DIMENSION "R" IS TO OUTSIDE OF BAR. RADIUS DIMENSION "I.R." IS TO INSIDE OF BAR.
4. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
5. FOR STANDARD HOOK DIMENSIONS, SEE SECTION 509.05 OF THE SPECIFICATIONS.
6. DIMENSION ON HOOK IS SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOKSIZE.
7. EPOXY COATED REINFORCING STEEL IS INDICATED BY THE LETTER "E" IN THE BAR MARK PREFIX.
8. REINFORCING STEEL SAMPLES
   REFER TO CMS SECTIONS 106.03, 700, 709.01 THRU 709.05 AND 705.08. SUFFICIENT ADDITIONAL REINFORCING STEEL SHALL BE PROVIDED FOR SAMPLING. RANDOM SAMPLES SHALL BE REPLACED IN THE STRUCTURES BY THE ADDITIONAL STEEL, SPLICED IN ACCORDANCE WITH 509.08.
9. FOR THE BAR TYPE 16, THE NO. OF TURNS "A" IS THE LENGTH "B" DIVIDED BY THE PITCH "C", PLUS 3 TURNS (TOTAL NO. OF CLOSED COILS), EXPRESSSED AS THE NEAREST WHOLE NO.. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH UNIT.
10. FOUR STEEL CHANNEL TEE OR ANGLE SPACERS, WEIGHING APPROXIMATELY 0.80 LBS. PER LIN. FT. OF SPACER, SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE SPACED EQUALLY ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF FOUR SPACERS, BASED ON 0.80 LBS PER LIN. FT., WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY FOR SPIRAL BAR.

DESIGN STRESSES

Concrete Class C - Compressive Strength 4000 P.S.I.

Concrete Class S - Compressive Strength 4500 P.S.I.

Reinforcing Steel - ASTM A615, A616, A617 Grade 60 Minimum Yield Strength 60,000 P.S.I.

Structural Steel - Yield strength 36,000 P.S.I.

PROPOSED STRUCTURE MODIFICATION

TYPE: 4 Span Continuous New Steel Beam Bridge with new composite reinforced concrete deck and existing reinforced concrete substructures.
SPANS 40'-0", 66'-0", 66'-0", 40'-0" % bearings
ROADWAY: 32'-0" Toe to Toe of Parapet Curbs
LOADING: HS 20-44 Case II and alternate Military Loading.
SKEW: None
ALIGNMENT: Tangent
SUPERELEVATION: None
WEARING SURFACE: Monolithic Concrete
APPROACH SLABS: AS-1-81 (25' Long)

EXISTING STRUCTURE

Type Continuous steel beam w/reinf. concrete deck & sub-structure.
Spans 40'-0", 66'-0", 66'-0", 40'-0" c to c brgs
Roadway 28'-0" b/b 2 safety curbs w/concrete parapets & alum railing.
Loading: CF = 30
Wearing Surface: Asphalt
Skew None
Alignment Tangent
Approach Slabs: AS-1-81 (15' long).

DECK REINFORCING PLAN

All No. 4 bar laps to be 1'-8" min.
All No. 5 bar laps to be 2'-2" min.

WELDED ATTACHMENT OF SUPPORTS FOR CONCRETE DECK FINISHING MACHINE MAY BE MADE TO AREAS OF THE FASCIA STRINGER FLANGES DESIGNATED "COMPRESSION". ATTACHMENTS SHALL NOT BE MADE TO AREAS DESIGNATED "TENSION". FILLET WELDS TO COMPRESSION FLANGES SHALL BE NOT CLOSER THAN 1" FROM EDGE OF FLANGE, BE NOT MORE THAN 2" LONG, AND BE NOT SMALLER THAN THE MINIMUM SIZE REQUIRED BY SECTION 2.7 OF THE AWS BRIDGE WELDING CODE.

❀ A HAUNCH WIDTH OF 9" SHALL BE USED FOR COMPUTING QUANTITY OF CONCRETE. HOWEVER, THE HAUNCH WIDTH MAY VARY BETWEEN 6" AND 12"❀(PROVIDED THAT THE SLOPE SHALL BE NOT MORE THAN 1:4 FOR A HAUNCH LESS THAN 9" WIDTH.)

DECK SLAB DEPTH: THE DISTANCE SHOWN FROM TOP OF DECK SLAB TO TOP OF STEEL BEAM IS THE DESIGN DIMENSION. THE QUANTITY OF DECK CONCRETE TO BE PAID FOR SHALL BE BASED ON THIS DIMENSION, EVEN THOUGH DEVIATION FROM IT MAY BE NECESSARY BECAUSE THE TOP FLANGE OF THE BEAM MAY NOT HAVE THE EXACT CAMBER OR CONFORMATION REQUIRED TO PLACE IT PARALLEL TO THE FINISHED GRADE.

ITEM SPECIAL, SEALING OF CONCRETE SURFACES: DEFLECTOR PARAPETS SHALL BE SEALED AS PER DETAILS WITH AN EPOXY SEALER. SEE THE PROPOSAL FOR SURFACE PREPARATION REQUIREMENTS, APPLICATION RATES, MATERIAL REQUIREMENTS AND APPLICATION PROCEDURES.

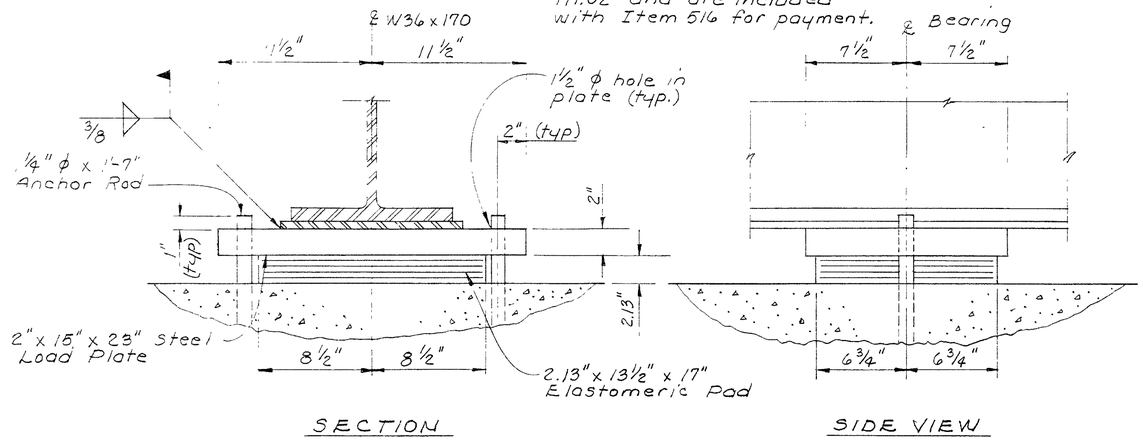
Pier No. 1 X = 1/4
Pier No. 2 X = 3/16
Pier No. 3 X = 1/8
Fwd. Abut. X = 0

Anchor rods shall be galvanized according to 711.02 and are included with Item 516 for payment.



3 internal elastomers x 0.412" = 1.236"
2 external elastomers x 0.295" = 0.590"
4 steel laminates x 0.075" = 0.300"
60 durometer
Max. design load = 203.7 Kips

FIXED BEARING
(Pier No. 2)

LAMINATED ELASTOMERIC BEARINGS

TOLERANCES:
INDIVIDUAL ELASTOMER LAYER THICKNESS: ± 20% OF DESIGN VALUE NOT TO EXCEED ± 1/8"

PLAN DIMENSIONS	-0, +1/4"
DESIGN THICKNESS ≤ 1¼"	-0, +1/8"
DESIGN THICKNESS > 1¼"	-0, +1/4"
EDGE COVER OF EMBEDDED LAMINATES	-0, +1/8"

LOAD PLATE: THE STEEL LOAD PLATE SHALL BE BONDED BY VULCANIZATION TO THE ELASTOMER DURING THE MOLDING PROCESS. STEEL LOAD PLATES SHALL BE ONE AND ONE HALF INCH THICK MIN. FOR BEARINGS RATED UP TO AND INCLUDING 200 KIPS AND SHALL BE TWO INCHES THICK MIN. FOR BEARINGS RATED OVER 200 KIPS.
WELDING OF THE LOAD PLATE TO THE SUPERSTRUCTURE SHALL BE CONTROLLED SO THAT THE PLATE TEMPERATURE AT THE ELASTOMER BONDED SURFACE SHALL NOT EXCEED 400°F AS DETERMINED BY THE USE OF PYROMETRIC STICKS OR OTHER TEMPERATURE MONITORING DEVICES.

BEARING REPOSITIONING: IF DECK CONCRETE IS PLACED AT AN AMBIENT TEMPERATURE HIGHER THAN 80°F OR LOWER THAN 40°F, AND THE BEARING SHEAR DEFLECTION EXCEEDS ONE-SIXTH OF THE BEARING HEIGHT AT 60°F ± 10°F, THE BEAMS OR GIRDERS SHALL BE RAISED TO ALLOW THE BEARINGS TO RETURN TO THEIR UNDEFORMED SHAPE AT 60°F ± 10°F.

STEEL DESIGNATION: THE STEEL LOAD PLATE SHALL BE A36 STEEL

BASIS OF PAYMENT: THE UNIT BID PRICE SHALL INCLUDE ALL MATERIALS, LABOR AND INCIDENTALS NECESSARY TO FURNISH AND INSTALL LAMINATED ELASTOMERIC BEARINGS EITHER FIXED OR EXPANSION. PAYMENT WILL BE MADE AT THE CONTRACT PRICE BID FOR ITEM 516, EACH, LAMINATED ELASTOMERIC BEARINGS(SEE ESTIMATED QUANTITIES)

ELASTOMERIC TEST PAD: THE ELASTOMERIC BEARING MANUFACTURER SHALL SUPPLY A PLAIN ELASTOMERIC PAD FOR TESTING PURPOSES. THE PAD SHALL BE FURNISHED FROM THE SAME BATCH OF NEOPRENE THAT IS USED IN THE FABRICATION OF THE LAMINATED ELASTOMERIC BEARINGS AND THE FABRICATOR SHALL CERTIFY THE IDENTITY OF THE ELASTOMER. THE PAD SHALL HAVE A 1/2" THICKNESS AND SHALL HAVE MINIMUM LENGTH AND WIDTH DIMENSIONS OF 6 INCHES.

PAYMENT FOR THE TEST PAD WILL BE INCLUDED IN THE BID PRICE FOR THE BEARING.

Quantities Carried to Bridge General Summary

PROPOSED WORK

1. Remove existing deck, all structural steel, bearings, approach slabs and designated portions of abutment backwalls.
2. Construct bearing seat modifications at abutments and piers.
3. Install new bearings and erect new structural steel.
4. Install new expansion joint systems at abutments
5. Complete new deck, parapets, backwall and wingwall modifications and new approach slabs.
6. Seal all parapets, designated areas of abutments and designated pier columns as shown on the plans
7. Paint Structural Steel. Finish Coat shall be gray.
8. Install new guardrail as shown on roadway plans.
9. Complete other work as described in these plans.
10. Dog Leg Rd shall be closed to traffic for a limited time period. For notes, see sheet 16.

PLAN NO. MOT-70-6.49/11.02

DESCRIPTION

The work shall consist of removing all copy from the extrusheet aluminum signs and furnishing and erecting permanent overlays (including new reflective background and copy). The overlays shall be directly attached to the aluminum extrusheet on the sign proper, the exit number panel, and the glare shield when needed. The Contractor is responsible for furnishing all materials, labor and equipment necessary to perform the work.

REMOVAL

In addition to the requirements of 630.12, the Contractor shall remove and dispose of all existing copy, including legend, border, shields, and existing overlays. The Contractor's removal technique shall not damage the extrusheet aluminum and shall leave the extrusheet aluminum smooth, with no indentations or protrusions from fasteners, no aluminum burrs, and no scaling from reflective sheeting which will impair the appearance or function of the overlays when attached.

MATERIAL

1. Flat Sheet Aluminum and Fiberglass Reinforced Plastic– Overlay, shields, and service symbol signs shall be fabricated from 0.040 inch flat sheet aluminum, ASTM B209, 6061–T6 in accordance with 730.11 or 0.075 inch fiberglass reinforced plastic (FRP) meeting the "Recommended Traffic Control Sign Panel Specification" published by the Society of the Plastics Industry. FRP Overlays for glare shields may be "tinted " to match the color of the sign under daylight viewing conditions per 630.04(6).
2. Reflective Sheeting– Shall be type F unless otherwise specified, shall meet the requirements of 630.02, and shall be contained on the "ODOT Approved Manufacturers and Brand Names of Reflective Sheeting " list.
3. Nonreflective Sheeting– Glare shield shall be covered with nonreflective sheeting per 630.04(6), unless tinted as per item 1 above.
4. Copy– Shall comply with 630.04(5).
5. Fasteners
   a) Overlays and Shields shall be fastened to the extrusheet aluminum with AVEX No.1693–0619 rivets having a 0.188 inch diameter, 0.339 inch head diameter, and a 0.602 inch maximum length or CHOBERT No. 1162–0617 rivets having a 3/16 inch nominal diameter, 0.375 inch head diameter and a 0.5313 inch maximum length.
   b) Copy including legends and borders shall be fastened with AVEX No. 1691–0414 rivets having a 0.1265 inch diameter, 0.250 head diameter and a 0.452 inch maximum length or BRIV No 1801–0513 rivets having a 5/32 inch nominal diameter, 0.310 inch head diameter and a 0.339 inch maximum length.

OVERLAY FABRICATION

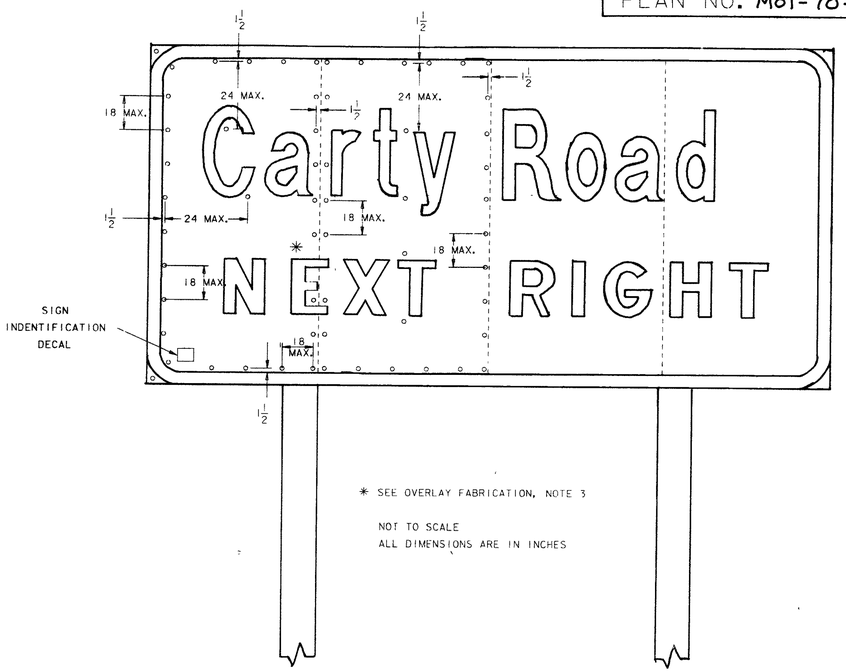
1. The number of individual overlays per sign shall be kept to a minimum and approximately equal in size with no overlay having a length or width dimension less than 18 inches, except as noted in item 6 below. The size of individual overlays shall be designed for safety during erection based on the equipment and method of erection by the Contractor. Where sign dimensions will permit, vertical joints shall be used in lieu of horizontal joints.
2. Sign designs and layouts shall be in accordance with the Ohio Manual of Uniform Traffic Control Devices for Streets and Highways, the ODOT Design Manual for Directional Guide Signs, and the ODOT Standard Sign Design Manual. or the FHWA Standard Highway Sign Manual. Working drawings shall be submitted as per 630.03.
3. All legends and borders shall be shop mounted except for any copy which when attached would be common to two or more individual overlays. All shields and service symbol signs shall be mounted in the field.
4. Sign indentification decals shall be in accordance with 630.04(7) except that decals shall be applied to the front, bottom,left–hand corner or left most overlay immediately inside the border for each overlaid sign.
5. All overlays shall be packaged, shipped, stored, and erected in such a manner that they are not scratched, dented, bent, or damaged in any way which would reduce the effective life of the reflective sheeting or of the copy. They shall be stored in such a manner that packaging paper or cardboard material does not become wet. If packaging material or slip sheeting becomes wet, it shall be removed from contact with sign faces before it dries to prevent damage to the reflective sheeting. Damage to the overlays will be cause for rejection.
6. Should it be found that a sign overlay does not evenly fit the existing extrusheet sign, the Contractor shall be paid under Item Special Signs, Permanent Overlay, Reworked or Special Signs, Permanent Overlay, Type G, Reworked, on a per foot basis for the work and material needed to reduce or enlarge the size of the overlay to conform to the following tolerances:

   If the complete overlay is too small to cover the existing sign, it shall be centered on the existing extrusheet and additional overlay material of the same type shall be furnished and installed by the Contractor to cover the remaining portion of the sign. If the additional material measures more than 6 inches on a side the border shall be adjusted to the outside edge of the additional overlay material.
   If the complete overlay when centered on the extrusheet overhangs the existing sign by more than 6 inches on a side, the Contractor shall rework the overlay using the incorrect overlay material to the greatest extent practicable so that it fits the existing sign within this tolerance.
   Legend spacing shall comply with all overlay fabrication requiremnents stated above (Overlay Fabrication, paragraph 2) to the greatest extent practicable as determined by the Engineer.

Estimated quantities have has been carried to the General Summary for this type of work, to be used as directed by the Engineer.

OVERLAY ERECTION

1. Only one directional guide sign in each direction at each interchange or intersection may be overlaid at one time. When two or more signs are on the same support, only one sign may be overlaid at a time.
2. Major dents and abrasions originating on the back of the extrusheet sign and protruding to the front shall be hammered flush with the remaining extrusheet surface prior to overlaying to avoid bulges, dimples, etc., in the overlay when erected.
3. The first overlay panel installed on a sign shall be located at the left (or right) edge of the sign. Subsequent panels shall be installed proceeding across the sign horizontally to the other side. If there is more than one row of overlay panels, the top row will be installed first with work proceeding by row to the bottom of the sign.
4. Overlay panels shall be butt jointed without overlaps or gaps except where butt joints would cause warping or buckling. When necessary, overlaps (preferred) or gaps not to exceed 3/32 inch per foot or 3/8 inch overall will be permitted to achieve a flatter surface fit.
5. Fastener Spacing for Attaching Overlay Panels to Extrusheet Aluminum.
   a) The fastener spacing around the perimeter of each overlay shall be a maximum of 18 inches. Fasteners shall be set back one and one half inches from each edge of the overlay panel except where borders exist. In this case, fasteners shall be set back one and one–half inches from the inside of the border. Each corner of each overlay panel shall have a fastener located one and one–half inches from each edge (or inside of border).
   b) An additional fastener shall be placed in each corner of the sign halfway between the corner and the outside of the border.
   c) The maximum fastener spacing within the interior of each overlay shall be 24 inches. Fasteners used in attaching overlays to the extrusheet aluminum shall not be fastened through any demountable embossed copy.
   d) Shields and service symbol signs shall be mounted after overlays are installed.



6. The first fastener to be started in an overlay panel shall be located at the top of the panel. Fasteners shall not be drawn down excessively in dimpled or pocketed areas of the overlay.

METHOD OF MEASUREMENT

Permanent overlays will be measured as the area, in square feet, of overlay furnished and erected in place, and includes removal and disposal of all existing copy. Permanent overlays reworked will be measured as the difference in the area, in square feet, between the oversized or undersized overlay and the final reworked overlay in place; and includes additional labor, overlay material, border, copy, and fasteners as needed.

BASIS OF PAYMENT

Quantities of Permanent Overlays, and "Permanent Overlays Reworked" measured as provided above, in place, complete and accepted, will be paid for under:

Item	Unit	Description
630	Square Foot	Signs, Permanent Overlay
630	Square Foot	Signs, Permanent Overlay, Type G
Special	Square Foot	Signs, Permanent Overlay, Reworked . . . . . 100 S.F. #
Special	Square Foot	Signs, Permanent Overlay, Type G, Reworked . . . . 100 S.F. #

These quantities have been carried to the general summary on sh. 24.

614 TEMPORARY RAISED PAVEMENT MARKERS

PLAN NO MOT-70-6.53/11.02

216/219

THIS ITEM OF WORK SHALL CONSIST OF FURNISHING, INSTALLING, MAINTAINING, AND SUBSEQUENTLY REMOVING TEMPORARY RAISED PAVEMENT MARKERS (TRPM'S). THE TRPM'S SHALL BE YELLOW OR WHITE, AS DESCRIBED IN THE PLAN.

MATERIAL

ALL UNITS SHALL BE OF SUFFICIENT STRENGTH AND PROPERLY SHAPED SO AS NOT TO BE DISLODGED OR BROKEN, OR THE REFLECTOR DISLODGED OR BROKEN, OR THE REFLECTOR DISLODGED OR DAMAGED BY IMPACTS FROM VEHICLES TIRES, INCLUDING THOSE OF HIGH PRESSURE TRUCK TIRES LOADED TO 4500 POUNDS.

RETROREFLECTORS SHALL BE PROVIDED IN ONE OR TWO DIRECTIONS ON EACH UNIT AS REQUIRED BY THE USAGE AND SHALL RETURN WHITE OR YELLOW LIGHT AS IS APPROPRIATED FOR THE APPLICATION.

THE REFLECTOR SHALL HAVE AN EFFECTIVE AREA OF 0.35 SQUARE INCH FOR TYPE A OR 3.0 SQUARE INCH FOR TYPE B. ITS BRIGHTNESS OR SPECIFIC INTENSITY (WHEN TESTED AT 0.2 DEGREE ANGLE OF OBSERVATION AND THE FOLLOWING ANGLES OF INCIDENCE) SHALL MEET OR EXCEED THE FOLLOWING:

SPECIFIC INTENSITY

TYPE A

INCIDENCE ANGLE (DEGREES)	WHITE	YELLOW
0	1.0	0.6
20	0.4	0.24
45	–	–

TYPE B

	WHITE	YELLOW
0	3.0	1.8
20	1.2	0.72
45	0.3	0.2

ANGLE OF INCIDENCE FORMED BY A RAY FROM LIGHT SOURCE TO THE MARKER AND THE NORMAL TO THE LEADING EDGE OF THE MARKER FACE (ALSO HORIZONTAL ENTRANCE ANGLE).

ANGLE OF OBSERVATION FORMED BY A RAY FROM LIGHT SOURCE TO THE MARKER AND THE RETURNED RAY FROM THE MARKER TO THE MEASURING RECEPTOR.

SPECIFIC INTENSITY IS THE MEAN CANDLEPOWER OF THE REFLECTED LIGHT (AT GIVEN INCIDENCE AND DIVERGENCE ANGLES) FOR EACH FOOT–CANDLE AT THE REFLECTOR (ON A PLANE PERPENDICULAR TO THE INCIDENT LIGHT).

TYPE A UNITS ARE INTENDED TO PROVIDE HIGH VISIBILITY BOTH AT NIGHT AND DURING DAYLIGHT. THEIR DAY TIME VISIBILITY SHALL BE ASSURED BY SIZE, SHAPE AND COLOR AS FOLLOWS:

1) THE UNITS SHALL BE A HIGH VISIBILITY YELLOW OR WHITE COLOR WHICH WILL NOT DEGRADE SUBSTANTIALLY DUE TO TRAFFIC WEAR AND WHICH WILL MATCH THE COLOR OF THE REFLECTOR.

2) WHEN VIEWED FROM ABOVE, THE UNITS SHALL HAVE A VISIBLE AREA OF NOT LESS THAN 14 SQUARE INCHES.

3) WHEN VIEWED FROM THE FRONT, PARALLEL TO THE PAVEMENT, AS FROM APPROACHING TRAFFIC, THE UNIT SHALL HAVE A WIDTH OF APPROXIMATELY 4 INCHES AND A VISIBLE AREA OF NOT LESS THAN 1.5 SQUARE INCHES.

TYPE B UNITS ARE INTENDED TO PROVIDE HIGH VISIBILITY AT NIGHT BY RETRO–REFLECTING AUTOMOTIVE HEADLIGHT BACK TO THE DRIVER.

INSTALLATION: THEY SHALL BE ATTACHED TO CLEAN, DRY PAVEMENT BY A BUTYL ADHESIVE PAD, A BITUMINOUS ADHESIVE OR OTHER CONSTRUCTION GRADE ADHESIVES (SUCH AS FRANKLIN PANEL AND METAL ADHESIVE) SUITABLE TO ANCHOR THE UNIT UNDER THE ABOVE CONDITIONS. WHEN IT IS NECESSARY TO ATTACH UNITS TO NEW CONCRETE WITH CURING COMPOUND REMAINING, THE CURING COMPOUND MEMBRANE SHALL BE REMOVED BY SANDBLASTING OR OTHER MECHANICAL CLEANING METHOD. THEY SHALL BE INSTALLED IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.

THE CONTRACTOR SHALL IMMEDIATELY REPLACE, AT HIS COST, ANY UNITS WHICH FAIL (BROKEN HOUSING, HOUSING WORN TO THE EXTENT THAT DAYTIME VISIBILITY IS SIGNIFICANTLY DIMINISHED OR OF AN UNACCEPTABLE COLOR, DETACHED OR BROKEN REFLECTOR, HOUSING DETACHED FROM ADHESIVE).

TRPM'S ARE LIKELY TO BE REMOVED BY SNOW PLOWING OPERATIONS, THUS THEY ARE NOT CONSIDERED SUITABLE FOR USE DURING THE PERIOD FROM OCTOBER 15 UNTIL APRIL 30. THE CONTRACTOR IS ADVISED TO SCHEDULE HIS WORK AND/OR THE USE OF THESE DEVICES TO AVOID THIS PERIOD. SHOULD THE CONTRACTOR CHOOSE TO USE TRPM'S DURING THIS PERIOD AND THEY ARE SUBSEQUENTLY REMOVED OR DESTROYED BY SNOW AND ICE CONTROL ACTIVITIES, THE CONTRACTOR SHALL IMMEDIATELY, AT HIS COST, PROVIDE A SUBSTITUTE TRAFFIC GUIDANCE SYSTEM EFFECTIVE DURING LIGHT AND DARK AND WHICH IS ACCEPTABLE TO THE ENGINEER.

THE UNITS SHALL BE PLACED ACCURATELY TO DEPICT STRAIGHT OR UNIFORMLY CURVING LINES. WHEN USED TO SUPPLEMENT TEMPORARY PAVEMENT MARKINGS, THEY MAY BE PLACED ON OR IMMEDIATELY ADJACENT TO THE PAVEMENT MARKING. LOCATIONS SHALL BE ADJUSTED UP TO ONE FOOT LONGITUDINALLY OR SIX INCHES LATERALLY TO AVOID PLACEMENT ON JOINTS, CRACKED OR DETERIORATED PAVEMENT. THEY SHALL NOT BE PLACED DIRECTLY ON PAVEMENT MARKINGS IF THIS WILL DETRACT FROM THEIR ABILITY TO REMAIN ATTACHED TO THE PAVEMENT.

APPLICATION

1) WHEN REQUIRED TO SUPPLEMENT PAVEMENT MARKING; THEY SHALL BE PLACED AS FOLLOWS:

LINE	TYPE	SPACING
EDGE LINE	A OR B	20' C/C
LANE LINE	A OR B	40' C/C*
CENTER LINE (SINGLE/BROKEN)	A OR B	40' C/C *
CENTER LINE (DOUBLE/SOLID)	A OR B	2 UNITS SIDE BY SIDE 4 INCHES APART 20' C/C
CHANNELIZING LINE (INCLUDES EXIT GORE NOSE)	A OR B	10' C/C

* CENTERED IN GAP

2) WHEN USED TO SIMULATE (REPLACE) PAVEMENT MARKING THEY SHALL BE PLACED AS FOLLOWS:

LINE	TYPE	SPACING
EDGE LINE	A	5' C/C
LANE LINE	A	4@3.33' C/C 30' GAP (40' CYCLE)
CENTER LINE (DOUBLE SOLID)	A	2 UNITS SIDE BY SIDE 5' C/C
CENTER LINE (SINGLE BROKEN)	A	4@3.33' C/C 30' GAP (40' CYCLE)
CHANNELIZING LINE (INCLUDES EXIT GORE NOSE)	A	5' C/C
EDGE LINE (TWO COLOR) (WHITE/YELLOW)	A	BACK TO BACK 5' C/C

YELLOW TRPM'S USED TO SEPARATE OPPOSITE FLOWS OF TRAFFIC (CENTER LINES) SHALL INCLUDE REFLECTIONS FOR BOTH DIRECTIONS. ALL OTHER YELLOW TRPM'S AND WHITE TRPM'S SHALL PROVIDE RETROREFLECTIVITY FOR ONE DIRECTION.

REMOVAL

REMOVAL SHALL BE ACCOMPLISHED IN A MANNER THAT LITTLE OR NONE OF THE ADHESIVE REMAINS ON THE PAVEMENT AND PERMANENT PAVEMENT SURFACES SHALL NOT BE SCARRED, BROKEN OR ROUGHENED SIGNIFICANTLY.

PAYMENT

BASIS OF PAYMENT SHALL BE AT THE CONTRACT UNIT PRICE PER EACH TRPM AND SHALL INCLUDE ALL LABOR, EQUIPMENT, HARDWARE AND INCIDENTALS REQUIRED TO PERFORM THE WORK. IT SHALL ALSO INCLUDE REPLACEMENT AT NO ADDITIONAL COST OF ALL TRPM'S WHICH, IN THE JUDGEMENT OF THE ENGINEER, FAIL FOR ANY REASON, EXCEPT DUE TO FAILURE OF THE PAVEMENT TO WHICH THEY ARE ATTACHED.

614 BARRIER REFLECTORS

PLAN NO. MOT-70-6.53/11.02

217/219

THIS ITEM SHALL CONSIST OF FURNISHING AND INSTALLING BARRIER REFLECTORS (TYPE A) ON GALVANIZED STEEL GUARDRAIL AND/OR BARRIER REFLECTORS (TYPE B) ON CONCRETE BARRIERS IN ACCORDANCE WITH PLANS AND SPECIFICATIONS

MATERIAL

THE BARRIER REFLECTOR SHALL BE AS MANUFACTURED BY STIMSONITE, REFLEXITE OR AN APPROVED FUNCTIONAL EQUIVALENT AS DESCRIBED BELOW:

STIMSONITE- MODEL 965 (WHITE & YELLOW) OR
REFLEXITE- MODEL 650 (WHITE & YELLOW)

THE ADHESIVE SHALL BE FRANKLIN PANEL AND METAL FRAMING ADHESIVE AS MANUFACTURED BY FRANKLIN CHEMICAL INDUSTRIES, PR-365 AS MANUFACTURED BY PRODUCTS RESEARCH AND CHEMICAL CORPORATION OR AN APPROVED EQUAL

ALL ADHESIVES SHALL HAVE A SHELF LIFE OF 6 MONTHS AT 75 DEGREES F STORAGE MINIMUM GUARANTEED

LAYOUT

THE CONTRACTOR SHALL LAYOUT ALL LOCATIONS TO ASSURE PROPER PLACEMENT THE LAYOUT SHALL BE APPROVED BY THE ENGINEER BEFORE INSTALLATIONS ARE STARTED. THE LAYOUT SHALL BE INCIDENTAL TO THE INSTALLATION OPERATION.

INSTALLATION

1) ON CONCRETE BARRIERS THE HEIGHT OF THE TOP OF THE REFLECTOR SHALL BE 26 INCHES ABOVE THE NEAR EDGE OF PAVEMENT, BUT IN NO CASE SHALL THE TOP OF THE REFLECTOR BE LESS THAN 3 INCHES BELOW THE TOP OF THE CONCRETE BARRIER. ATTACHMENT SHALL BE BY THE ABOVE REFERENCED ADHESIVE AND APPLIED PER MANUFACTURER'S RECOMMENDATION

2) GUARDRAIL REFLECTORS SHALL BE INSTALLED WITHIN THE CONCAVE SURFACE OF THE GUARDRAIL. ATTACHMENT MAY BE BY BRACKET WHICH FITS UNDER THE HEAD OF THE CENTER GUARDRAIL BOLT OR BY THE ABOVE REFERENCED ADHESIVE AND APPLIED PER MANUFACTURER'S RECOMMENDATION.

3) THE ABOVE REFERENCED ADHESIVE SHALL BE FLASHED WHEN APPLIED TO ACHIEVE MAXIMUM BONDING STRENGTH

4) WHEN MOUNTED ON A FLAT SURFACE, THE REFLECTOR SHOULD BE TILTED UPWARD FROM THE VERTICAL OR PLUMB POSITION 2-3 DEGREES TO FACILITATE "RAIN WASHING" OF THE REFLECTOR FACE.

5) TWO-LANE HIGHWAY - WHITE UNITS SHALL BE PLACED ON THE RIGHT SIDE OF APPROACHING TRAFFIC.

FOUR-LANE DIVIDED HIGHWAY - WHITE UNITS SHALL BE PLACED ON THE RIGHT SIDE OF APPROACHING TRAFFIC AND YELLOW ON THE LEFT

BASIS OF PAYMENT

BASIS OF PAYMENT SHALL BE AT THE UNIT PRICE BID FOR EACH REFLECTOR AND SHALL INCLUDE ALL LABOR, EQUIPMENT, HARDWARE AND INCIDENTALS REQUIRED TO PERFORM THE WORK.

ITEM	UNIT	DESCRIPTION

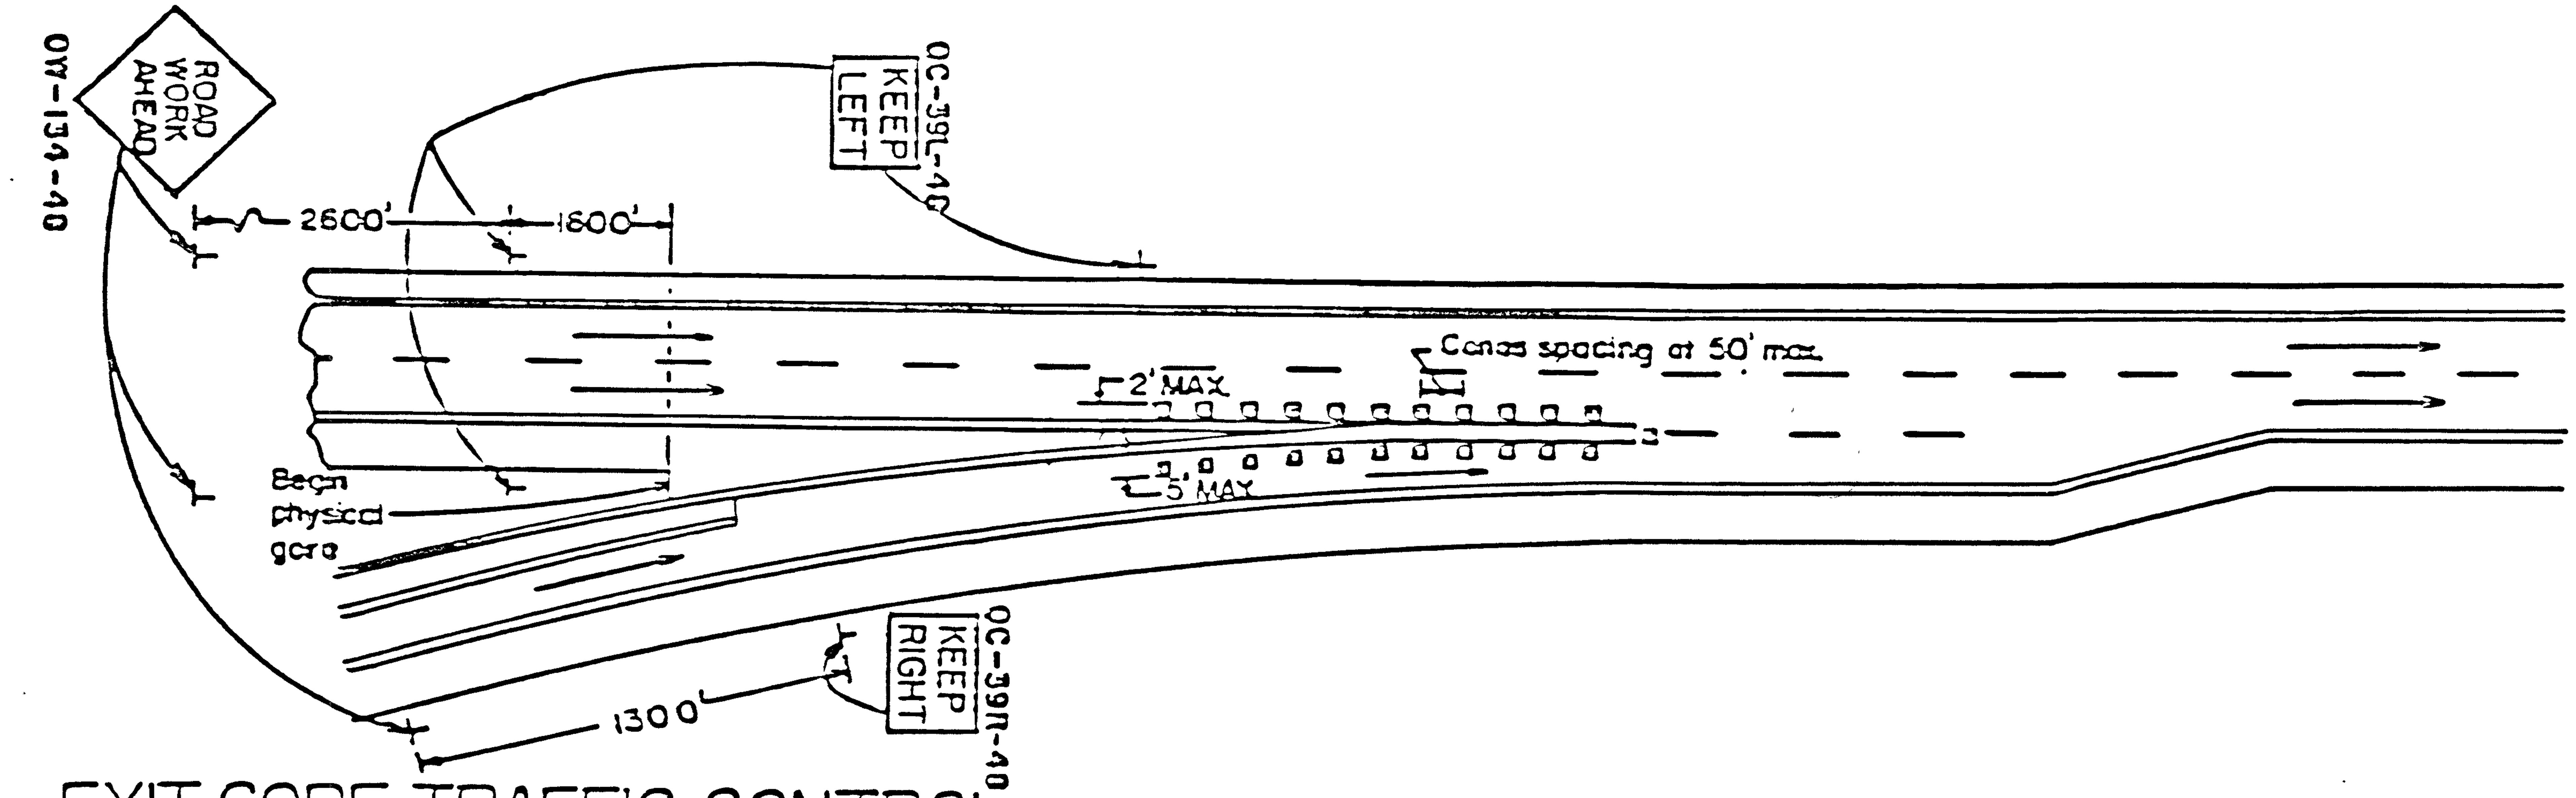
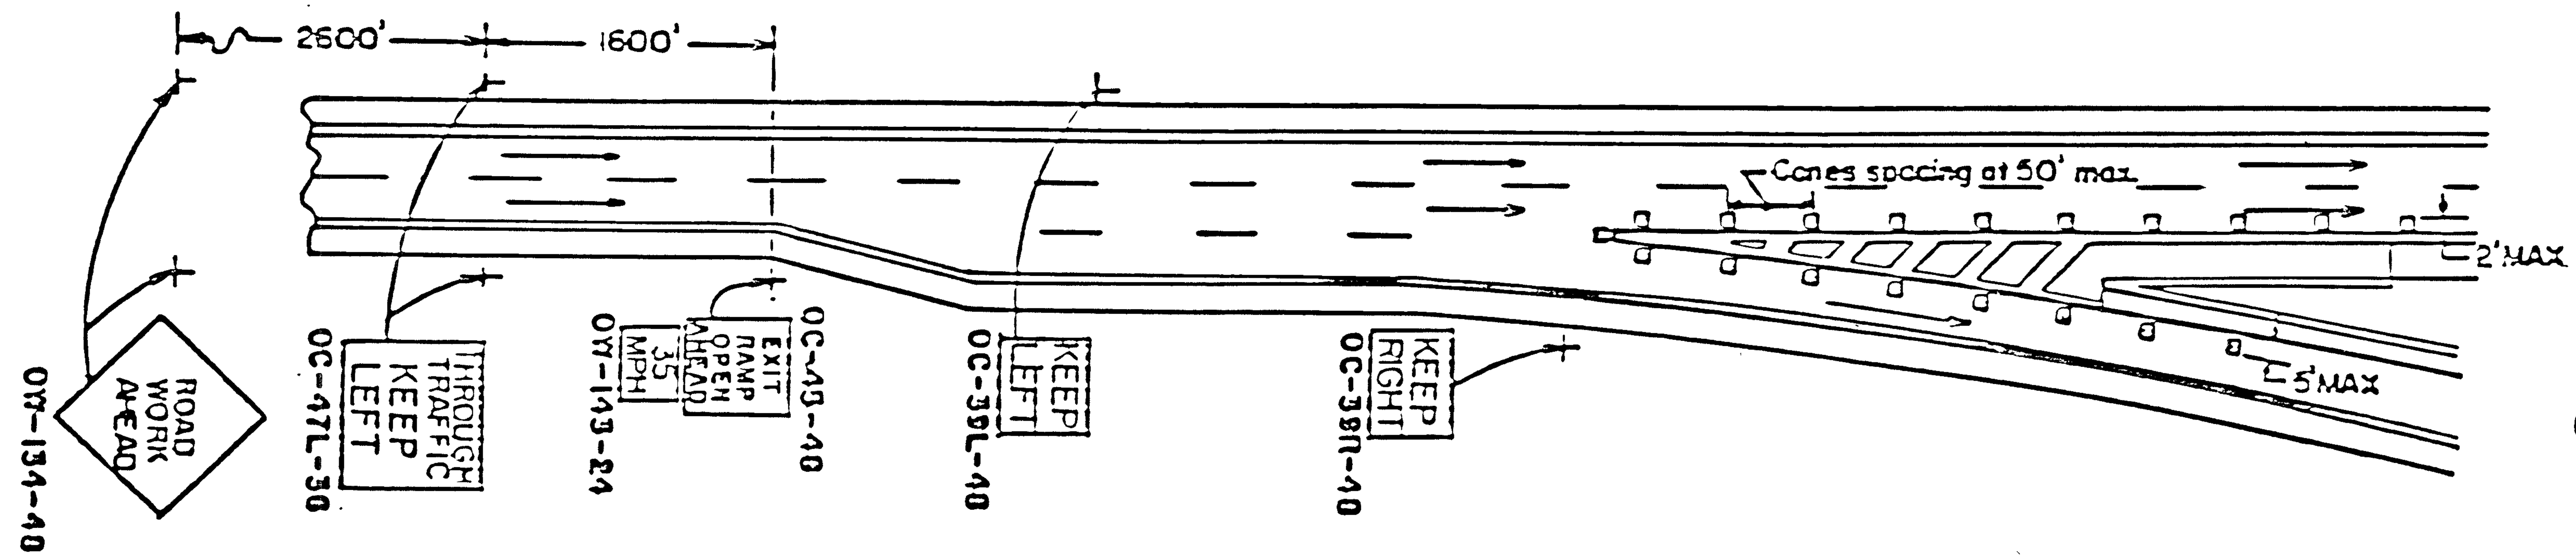
ENTRANCE GORE TRAFFIC CONTROL



EXIT GORE TRAFFIC CONTROL



GENERAL NOTE

1. THE REQUIREMENTS OF THE "TRAFFIC CONTROL FOR LONG LINE PAVEMENT MARKING OPERATIONS" NOTE (M.T. 99.20) SHALL APPLY IN LIEU OF THIS DETAIL WHERE EDGE LINES AND/OR CHANNELIZING LINES ARE SPRAYED IN MOVING OPERATIONS SEPARATE FROM ANY OTHER WORK.
2. WHERE THE WORK IN THE GORE AREA REQUIRES MORE POSITIVE TRAFFIC CONTROL OR OVERNIGHT WORK AREA PROTECTION, THE TRAFFIC CONTROL FOR "LANE CLOSURE AT THE ENTRANCE RAMP" OR "LANE CLOSURE AT EXIT GORE" SHOULD BE EMPLOYED. ~~SEE SHEET~~ ___.
3. THE SPACING BETWEEN SIGNS SHOWN ON THIS DETAIL MAY BE ADJUSTED (INCREASED OR DECREASED) WITH THE APPROVAL OF THE ENGINEER TO POSITION THEM NO CLOSER THAN 200 FEET TO EXISTING SIGNS WHICH MUST REMAIN IN USE.
4. AT AN ISOLATED ENTRANCE GORE AREA, A FLASHING ARROW PANEL CONFORMING TO REQUIREMENTS IN TC-35.10 MAY BE SUBSTITUTED FOR THE ADVANCE OC-39-48 SIGNS
5. AT AN INTERCHANGE WHERE BOTH EXITS AND ENTRANCES ARE MARKED WITH TRAFFIC CONTROL IN PLACE AT THE SAME TIME, THE OW-134-48 SIGN ON THE ENTRANCE RAMP IS NOT REQUIRED.
6. FOR NIGHT CLOSURES, THE OW-134-48 AND THE OC-47L-36 SIGNS SHALL BE LIGHTED USING TYPE A FLASHING BARRICADE WARNING LIGHT.

OHIO DEPARTMENT OF TRANSPORTATION

TRAFFIC CONTROL FOR WORK IN GORE AREAS

DATE 1/81

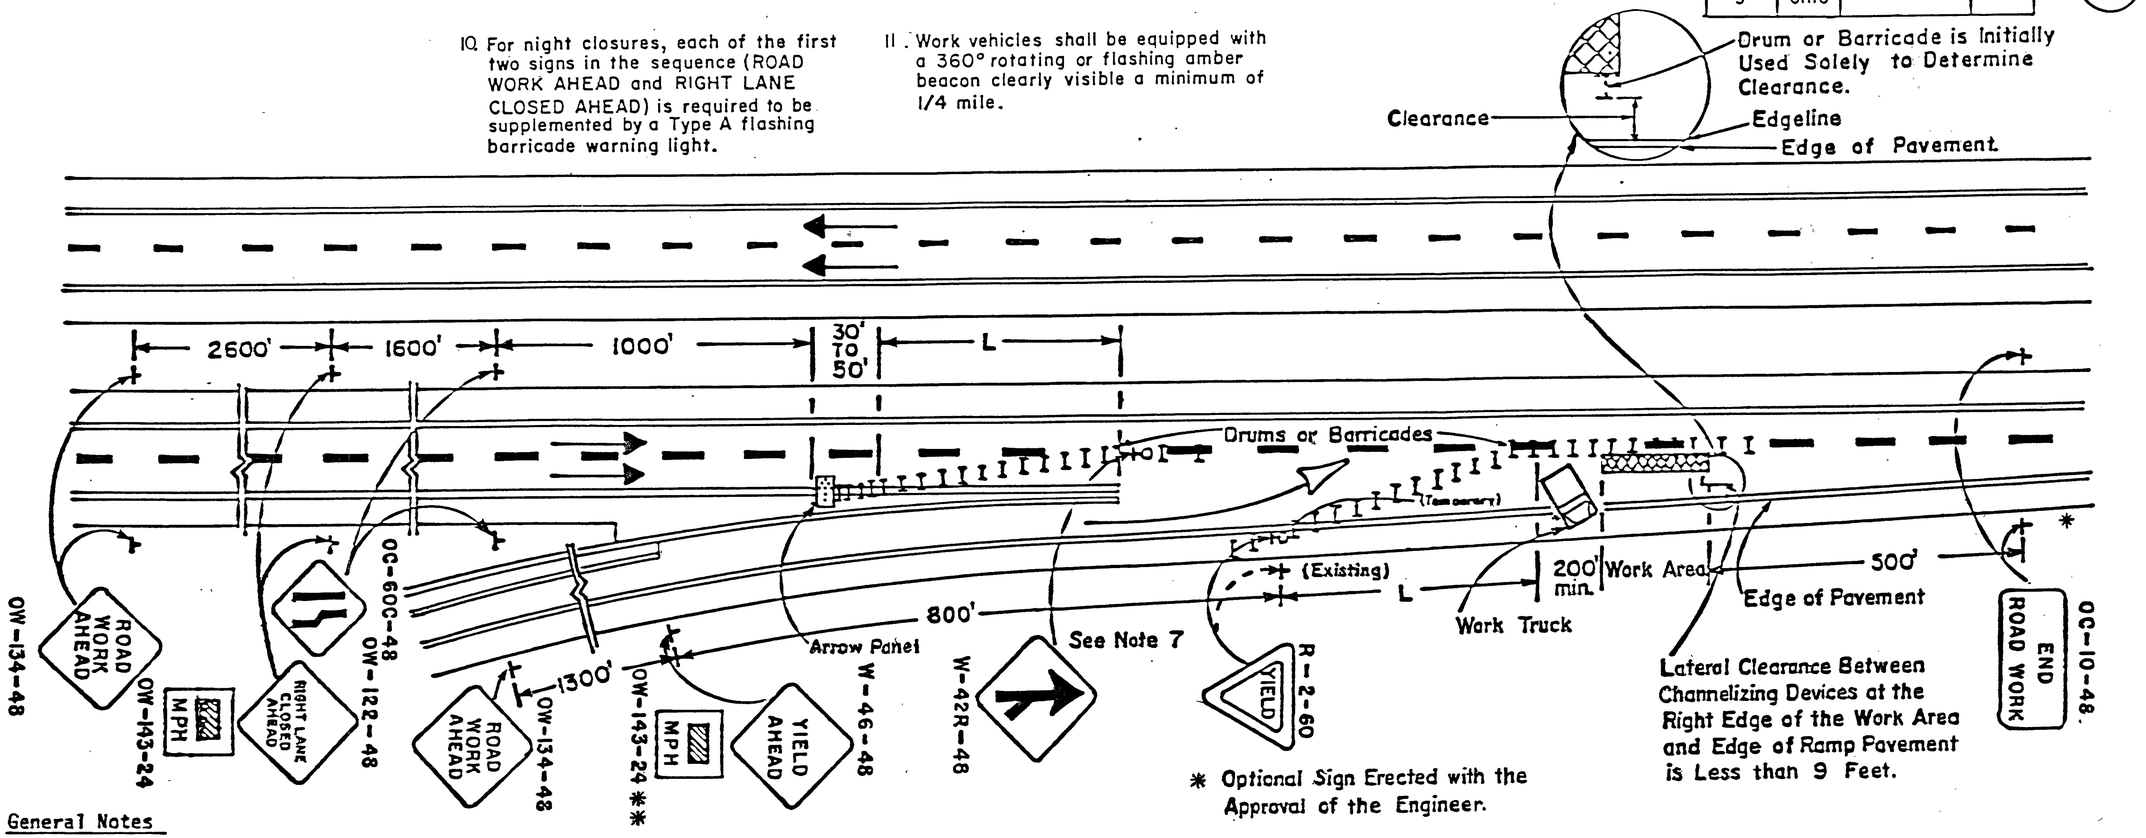
DR JDL CK CDR

71-2

Rev. EEF PM 10/85

10. For night closures, each of the first two signs in the sequence (ROAD WORK AHEAD and RIGHT LANE CLOSED AHEAD) is required to be supplemented by a Type A flashing barricade warning light.

11. Work vehicles shall be equipped with a 360° rotating or flashing amber beacon clearly visible a minimum of 1/4 mile.



* Optional Sign Erected with the Approval of the Engineer.

General Notes

1. This work area traffic control application shall be employed when the lateral clearance between channelizing devices at the right edge of the work area and the edge of the ramp pavement is less than 9 feet. When the clearance is more than 9 feet, the traffic control on "Lane Closure at Entrance Ramp: Plan A" should be used, or the ramp should be closed. When the ramp is closed, appropriate detour signs shall be provided.

2. Thirteen (13) drums or barricades shall be used to form the lane transition taper in advance of the work area. Five (5) channelizing devices shall be used to form the taper on the shoulder. Cones, drums, or barricades shall be spaced at 50 foot centers. Cones may be substituted for barricades or drums for the lane closures during daylight hours. (See note 10)

3. Ramp signs shall be dual mounted on multi-lane ramps. When the ramp is not long enough to allow placement as specified above, the signs may be spaced proportionately within the space available as determined by the Engineer (a 200' minimum spacing must be maintained).

4. The flashing arrow panel shall be in accordance with TC-35.10

5. The work truck shown at the beginning of the work area shall be in place and unoccupied whenever men are working within the work area. This truck shall be moved from the pavement whenever workmen are not in the work area. Other protective devices may be used in lieu of work truck shown when approved by the Engineer.

6. Type C steady burning barricade warning lights shall be erected on drums or barricades for night lane closures. Maximum spacing shall be 50' center to center in advance of the work area and 200' center to center within the limits of the work area.

7. It may be necessary to move the location of an existing Yield condition In these cases, the permanent R-2 sign installation shall be covered and the temporary installation shall be mounted upon a drive post which shall be banded to a drum with stainless steel strapping material or other techniques subject to the approval of the Engineer.

8. Taper Formulae:

   $L = S \times W$ for Speeds of 45 or more.
   $L = WS^2/60$ for Speeds 40 or less.

   Where:

   L = Minimum length of taper.
   S = Numerical value of posted speed limit prior to work or 85 percentile speed.
   W = Width of offset.

9. THE SPACINGS BETWEEN CONSTRUCTION AND MAINTENANCE SIGNS SHOWN ON THIS DETAIL MAY REQUIRE ADJUSTMENTS (INCREASES OR DECREASES) TO ASSURE THAT THEY ARE POSITIONED NO CLOSER THAN 200 FEET TO EXISTING SIGNS AS DETERMINED BY THE ENGINEER.
