LIMITED ACCESS

This improvement is especially designed for through traffic and has been declared a limited access highway or freeway by action of the Director of Highways in accordance with the provisions of Section 5511.02 of the Revised Code of Ohio.

The Standard Specifications of the State of Ohio, Department of Highways, including changes and Supplemental Specifications listed in the proposal shall govern this improvement.

The right of way for this improvement will be provided by the State of Ohio.

I hereby approve these plans and declare that the making of this improvement will not require the closing to traffic of the highways and that provisions for the maintenance and safety of traffic will be as set forth on these plans and estimates.

Approved — Date 5-6-60 — C. L. Tobias — Division Deputy Director

Approved — Date 9-22-60 — Guy E. Keeper — Deputy Director of Planning and Programming

Approved — Date 9-2-60 — H. A. Brennan — Engineer of Bridges

Approved — Date 9-15-60 — [illegible] — Engineer of Location and Design

INTERSTATE ROADS
(SIMILAR FOR ALL FOUR CORNERS OF STRUCTURE)

SPECIAL BERM AND SLOPE PROTECTION

PRIOR TO REPLACEMENT OF SOD IN THE BERM AND SLOPE, GALVANIZED POULTRY FENCE SHALL BE PLACED ON THE FINISHED GRADE IN STRANDS WHICH SHALL BE AT RIGHT ANGLES TO THE DIRECTIONS OF FLOW. EACH STRAND SHALL BE STAKED SECURELY ON TOP AND BOTTOM WITH STAKES PLACED AT FOUR FOOT INTERVALS AND ALTERNATED IN ROWS FOUR FEET APART.

STAKES SHALL BE 1"×1"×8" WOOD STAKES AND SHALL BE PERPENDICULAR TO THE GROUND AND FLUSH WITH THE FINISHED GRADE.

THE FENCE SHALL BE STRAIGHT LINE POULTRY FENCE OR EQUIVALENT WITH STRAND WIDTH OF FOUR FEET HAVING A TWO INCH MESH AND ALL WIRES NO. 20 GAUGE.

THE STRANDS OF FENCING SHALL BE FASTENED TOGETHER AT TWELVE INCH INTERVALS BY MEANS OF HOG RINGS.

THE FENCE SHALL BE SECURED TO THE WOOD STAKES BY METAL STAPLES.

SOD SHALL BE LAID IN ACCORDANCE WITH THE CONSTRUCTION AND MATERIALS SPECIFICATIONS SECTION L-1007.

PAYMENT FOR ALL THE ABOVE SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ITEM L-10 SODDING FOR SPECIAL BERM AND SLOPE PROTECTION.

TRAFFIC MAINTENANCE

U. S. 250: TWO-WAY TRAFFIC SHALL BE MAINTAINED AT ALL TIMES. OUTSIDE THE LIMITS OF THE TEMPORARY RUN-AROUND, THIS SHALL BE ACCOMPLISHED BY USE OF EITHER THE EXISTING PAVEMENT, THE PROPOSED PAVEMENT, OR TEMPORARY TRAFFIC LANES SURFACED WITH T-10 AGGREGATE AND STABILIZED WITH M-10 CALCIUM CHLORIDE. SEE RUN-AROUND DETAIL SHEET FOR QUANTITIES.

GALLOWAY ROAD, CAMP ROAD, RYE BEACH ROAD: THE CONTRACTOR SHALL ARRANGE HIS CONSTRUCTION OPERATIONS SO AS TO KEEP AT LEAST ONE OF THESE ROADS OPEN TO TWO-WAY TRAFFIC AT ALL TIMES.

BOSS ROAD: BOSS ROAD RELOCATED AND RYE BEACH ROAD SHALL BE COMPLETED AND OPENED TO TRAFFIC PRIOR TO THE CLOSING OF EXISTING BOSS ROAD AT THE LIMITS OF U. S. 6 RELOCATED.

INCLUDED IN THE ITEM "MAINTAINING TRAFFIC" IS THE MAINTENANCE OF ALL TRAFFIC LANES REQUIRED. TEMPORARY TRAFFIC LANES SHALL BE CONSTRUCTED AS DIRECTED BY THE ENGINEER OF STABILIZED TRAFFIC COMPACTED SURFACE COURSE; IN NO CASE SHALL A SINGLE LANE BE LESS THAN TEN (10) FEET WIDE. FURNISHING AND PLACING OF MATERIAL FOR TEMPORARY TRAFFIC LANES SHALL BE PAID FOR AS FOLLOWS:

ITEM T-10	TRAFFIC COMPACTED SURFACE COURSE FOR TEMPORARY TRAFFIC LANES
ITEM M-10	CALCIUM CHLORIDE FURNISHED AND APPLIED FOR TEMPORARY TRAFFIC LANES

TRAFFIC MAINTENANCE NOTES CONTINUED ON SHEET 13.

LIGHTS, SIGNS, AND BARRICADES

THE CONTRACTOR SHALL, IN ADDITION TO THE GENERAL REQUIREMENTS OF SEC. G-7.07, ON THIS PROJECT PERFORM THE FOLLOWING:

(a) PROVIDE, ERECT, AND MAINTAIN MOVABLE GATES ON INTERSECTING ROADS CLOSED TO TRAFFIC AT ALL POINTS WHERE LOCAL TRAFFIC MOVEMENT TERMINATES.

(b) PROVIDE, ERECT, AND MAINTAIN LIGHTS, SIGNS, AND BARRICADES AT THE WORK LIMITS ON ALL INTERSECTING ROADS WHICH REMAIN OPEN TO TRAFFIC.

(c) PROVIDE, ERECT, AND MAINTAIN STANDARD 40" x 24" SIZE "ROAD CLOSED" SIGNS, SIGN SUPPORTS, AND LIGHTS AT THE LOCATIONS SHOWN ON THE SCHEMATIC PLAN DURING PERIODS IN WHICH THE AFFECTED ROADS ARE CLOSED TO TRAFFIC.

LIGHTS, BARRICADES, AND DANGER AND WARNING SIGNS SHALL BE PROVIDED AT LOCATIONS SHOWN ABOVE IN ACCORDANCE WITH SEC. G-7.07. BARRICADES AND GATES SHALL BE AS DETAILED ON STANDARD CONSTRUCTION DRAWING NO. G-7.07. SIGN SUPPORTS AND LIGHTS FOR "ROAD CLOSED" SIGNS SHALL BE AS DETAILED IN THE "OHIO MANUAL OF UNIFORM TRAFFIC CONTROL DEVICES".
PAYMENT FOR PROVIDING, ERECTING, MAINTAINING, AND REMOVING BARRICADES, GATES, LIGHTS, SIGNS, AND SIGN SUPPORTS SHALL BE INCLUDED IN THE LUMP SUM PRICE BID FOR "MAINTAINING TRAFFIC".

DESIGN SPEED

THE GEOMETRICS FOR THIS PROJECT HAVE BEEN PLANNED FOR A DESIGN SPEED OF 70 MILES PER HOUR.

ELEVATION DATUM

ALL ELEVATIONS ARE BASED ON U. S. G. S. DATUM.

UTILITIES

THE CONTRACTOR SHALL NOTIFY AT LEAST 48 HOURS BEFORE BREAKING GROUND ALL PUBLIC SERVICE CORPORATIONS HAVING WIRE, POLES, PIPE, CONDUITS, MANHOLES OR OTHER STRUCTURES THAT MAY BE AFFECTED BY THIS OPERATION, INCLUDING ALL STRUCTURES WHICH ARE AFFECTED AND NOT SHOWN ON THESE PLANS. ANY AND ALL WORK REQUIRED FOR PUBLIC OR PRIVATE UTILITIES WILL BE DONE BY AND AT THE EXPENSE OF THEIR RESPECTIVE OWNERS, UNLESS OTHERWISE NOTED ON THESE PLANS.

ANY OR ALL WORK REQUIRED FOR PUBLIC OR PRIVATE UTILITIES WILL BE DONE BY AND AT THE EXPENSE OF THEIR RESPECTIVE OWNERS, UNLESS OTHERWISE NOTED ON THESE PLANS.

FIELD OFFICE

THE CONTRACTOR SHALL, IN ACCORDANCE WITH SEC. S-0.01(b), PROVIDE, FOR THE EXCLUSIVE USE OF THE STATE'S EMPLOYEES, A SUITABLE FIELD OFFICE HAVING A MINIMUM OF 500 SQ. FT. OF FLOOR SPACE. THE CONTRACTOR SHALL HAVE A TELEPHONE INSTALLED AND MAINTAINED IN THIS FIELD OFFICE DURING THE CONSTRUCTION OF THIS PROJECT. THE CONTRACTOR SHALL ALSO PROVIDE AND INSTALL WIRING AND OUTLETS SUITABLE FOR CONNECTING ELECTRIC LIGHTS AND OFFICE EQUIPMENT IN THE FIELD OFFICE AND PROVIDE 110-VOLT ALTERNATING CURRENT TO THE OFFICE DURING THE ENTIRE PERIOD OF CONSTRUCTION OF THIS PROJECT.

UNDERGROUND UTILITIES

THE LOCATIONS OF THE UNDERGROUND UTILITIES SHOWN ON THE PLANS HAVE BEEN OBTAINED BY DILIGENT FIELD CHECKS AND SEARCHES OF AVAILABLE RECORDS. IT IS BELIEVED THAT THEY ARE ESSENTIALLY CORRECT, BUT THE STATE OF OHIO MAKES NO GUARANTEES AS TO THEIR ACCURACY OR COMPLETENESS.

ESTIMATED QUANTITIES

SPECIFIC LOCATIONS AND USAGE OF ESTIMATED QUANTITIES SET UP ON THIS PLAN TO BE USED "AS DIRECTED BY THE ENGINEER" SHALL BE MADE A MATTER OF RECORD BY INCORPORATION INTO THE FINAL CHANGE ORDER GOVERNING COMPLETION OF THIS PROJECT.

CONSTRUCTION LAYOUT STAKES

SEE NOTE IN PROPOSAL DESCRIBING THE WORK INCLUDED IN THIS LUMP SUM PAY ITEM.

SUPERELEVATION

SUPERELEVATED CURVES SHALL BE BUILT WITHOUT CROWN. THE CROWN SHALL BE WORKED OUT OF THE PAVEMENT IN THE PORTION BETWEEN THE BEGINNING OF THE TRANSITION AND THE POINT WHERE THE SUPERELEVATION EQUALS TWICE THE CROWN.

NON-RIGID PAVEMENT REMOVAL

REMOVAL AND DISPOSAL OF EXISTING NON-RIGID PAVEMENT, UNLESS OTHERWISE INDICATED ON THESE PLANS, SHALL BE MEASURED AND PAID FOR AS ITEM E-1, ROADWAY EXCAVATION.

ROAD NAME SIGNS

ALL COUNTY, TOWNSHIP, CITY OR VILLAGE ROAD OR STREET NAME SIGNS THAT WILL BE DISTURBED BY THE CONSTRUCTION SHALL BE CAREFULLY REMOVED AND STORED BY THE CONTRACTOR FOR DISPOSAL BY THEIR RESPECTIVE OWNERS. PAYMENT FOR THIS OPERATION SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ROADWAY EXCAVATION.

GUARD RAIL REMOVAL

THE REMOVAL OF ANY GUARD RAIL OR GUARD RAIL POSTS LYING WITHIN THE LIMITS OF ROADWAY EXCAVATION OR EMBANKMENT AND NOT SPECIFICALLY PAID FOR UNDER A SEPARATE ITEM IS INCLUDED IN THE CONTRACT UNIT PRICE BID FOR ROADWAY EXCAVATION. ALL RESULTING MATERIALS SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND SHALL BE DISPOSED OF BY HIM AT NO EXTRA COST TO THE STATE, EXCEPT THAT THE STEEL RAIL ON ALL EXISTING STEEL BEAM TYPE OR STEEL CABLE ON STEEL CABLE TYPE GUARD RAILS SHALL BE STORED ON THE RIGHT-OF-WAY FOR DISPOSAL BY THE OWNER.

REMOVAL OF DRIVE & APPROACH PAVEMENT

IN THE CONSTRUCTION OF NEW DRIVES AND APPROACHES, THE REMOVAL OF EXISTING PAVEMENT, WHETHER CONCRETE OR FLEXIBLE TYPE, SHALL BE MEASURED AND PAID FOR AS ITEM E-1, ROADWAY EXCAVATION. WHERE NECESSARY TO MEET EXISTING DRIVE AND APPROACH PAVEMENT GRADE, THE EXISTING PAVEMENT SHALL BE CUT TO A NEAT LINE.

ITEM I-22 SUBBASE, GRADING A OR B, AS PER PLAN

THE MATERIAL FURNISHED FOR THIS ITEM SHALL MEET THE REQUIREMENTS OF GRADING A OR B OF SECTION I-22.02 EXCEPT THAT, FOR EITHER GRADING, NO MORE THAN 10 PER CENT OF THE MATERIAL SHALL PASS A NO. 200 SIEVE.

FILLING BASEMENTS OUTSIDE NORMAL WORK LIMITS

IN ADDITION TO THE GENERAL REMOVAL REQUIREMENTS OF SEC. E-1.03(c), ALL BASEMENTS OR PORTIONS THEREOF WITHIN THE RIGHT-OF-WAY ON THIS PROJECT BUT BEYOND THE NORMAL SLOPE LINES SHALL BE FILLED TO SURROUNDING GROUND ELEVATION AS DIRECTED BY THE ENGINEER. PRIOR TO FILLING WITHIN THIS AREA, THE BASEMENT FLOORS AND WALLS SHALL BE BROKEN UP OR REMOVED AS PROVIDED UNDER SEC. E-1.03(c) AND ALL HOUSE DRAINS NOT REMOVED SHALL BE PLUGGED AS PROVIDED ELSEWHERE IN THESE NOTES.
WHERE BASEMENTS EXTEND BEYOND THE RIGHT-OF-WAY LINE, BUT ARE WITHIN SLOPE EASEMENT OR WORK AGREEMENT LINES, THEY SHALL BE FILLED TO THE ELEVATION OF THE SURROUNDING GROUND AS DIRECTED BY THE ENGINEER BUT THE REQUIREMENTS OF SEC. E-1.03(c) FOR REMOVALS BELOW THE PROPOSED FINISHED SURFACE SHALL BE WAIVED FOR THE PORTIONS EXTENDING BEYOND THE RIGHT-OF-WAY LINE.
PAYMENT FOR ALL OF THE ABOVE EXCEPT PLUGGING, SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ROADWAY EXCAVATION, ITEM E-1.

HEAVY EQUIPMENT

THE CONTRACTOR SHALL EXERCISE CARE IN THE USE OF HEAVY EQUIPMENT OVER FINISHED WORK AND WILL BE REQUIRED TO REMOVE AND REPLACE ANY COMPLETED WORK DESTROYED THEREBY. CULVERTS SHALL BE BACKFILLED TO A HEIGHT OF FOUR FEET BEFORE LOADED EARTH-MOVING EQUIPMENT IS PERMITTED TO CROSS THE TRENCH.
ANY ADDITIONAL FILL AND SUBSEQUENT EXCAVATION REQUIRED TO PROVIDE THIS MINIMUM COVER SHALL BE MADE AT NO ADDITIONAL COST TO THE STATE. HEAVY EQUIPMENT SHALL NOT BE OPERATED OVER ANY COMPLETED LAYER OF EMBANKMENT, COMPACTED SUBGRADE, OR SUBBASE IF SUCH OPERATION TENDS TO DESTROY THE SOIL STRUCTURE OR PIPE UNDERDRAINS; HOWEVER, IF SUCH OPERATION CANNOT BE AVOIDED, THE CONTRACTOR WILL BE REQUIRED TO REDUCE THE SIZE OF LOADS TO AN EXTENT THAT DAMAGE DOES NOT OCCUR.

CURBS ON APPROACH SLABS

THE HEIGHT AND FACE OF CURBS ON APPROACH SLABS SHALL BE TRANSITIONED FROM THE STANDARD SECTION USED ON THE APPROACH PAVEMENT TO THE SECTION USED ON THE BRIDGE CURBING WITHIN THE LIMITS OF THE APPROACH SLAB.

ROCK SUBGRADE

THE CONTRACTOR SHALL BE PAID FOR THE THICKNESS OF I-22 MATERIAL SHOWN ON THE TYPICAL SECTIONS IN ROCK EXCAVATION AREAS. ANY POCKETS IN THE ROCK BELOW THE PLAN SUBGRADE ELEVATION SHALL DRAIN EITHER LONGITUDINALLY OR LATERALLY AND ALL IRREGULARITIES IN THE ROCK BELOW THIS ELEVATION SHALL BE FILLED WITH I-22 MATERIAL AT NO ADDITIONAL COST TO THE STATE.

CURB ENDS

CURB ENDS AND CURB DROPS SHALL BE TAPERED FROM 6" HIGH TO 1-1/2" HIGH IN A DISTANCE OF 10 FT. AT CURB ENDS AND 18" AT CURB DROPS.

SEP 15 1960

GENERAL NOTES (CONT.)

FED.RD. DIVISION	STATE	PROJECT	TYPE FUNDS
2	OHIO		

11/235

ERI. G-11.30

ROUNDING OF CORNERS ON CROSS SECTIONS

THE ROUNDED CORNERS, SHOWN ON TYPICAL SECTIONS, APPLY TO ALL CROSS SECTIONS EVEN THOUGH OTHERWISE SHOWN IN THESE PLANS.

ITEM L-9 SEEDING & PROTECTING ROADWAY AREAS

QUANTITIES FOR SEEDING ARE CALCULATED FOR THE UNSODDED SOIL AREAS BETWEEN LINES TEN (10) FEET OUTSIDE THE WORK LIMITS AS SHOWN ON THE PLANS AND CROSS SECTIONS OR TO THE RIGHT OF WAY, EASEMENT, OR WORK AGREEMENT LINE IF SUCH LINE IS LESS THAN TEN (10) FEET FROM THE WORK LIMITS. ALL AREAS OUTSIDE THESE LIMITS WHERE THE VEGETATIVE COVER HAS BEEN DISTURBED OR DESTROYED DURING THE CONSTRUCTION SHALL BE RESTORED AND SEEDED IN CONFORMANCE WITH THE PROVISIONS OF ITEM L-9 BY THE CONTRACTOR AT HIS OWN EXPENSE. THE FOLLOWING SEED MIXTURE SHALL BE APPLIED AT THE RATE OF 3 LBS. PER 1000 SQ. FT.

CREEPING RED FESCUE	70%
KENTUCKY BLUEGRASS	25%
ALSIKE CLOVER	5%

THE ABOVE MIXTURE SHALL BE USED ON ALL AREAS INCLUDING AREAS IN FRONT OF RESIDENCES.

GRADING TOLERANCES

FOR AREAS BETWEEN CURB AND SIDEWALK AND FOR AREAS IN FRONT OF RESIDENCES AND SIMILAR AREAS SPECIFICALLY INDICATED BELOW, THE SEED BED SHALL BE PREPARED TO PROVIDE A SMOOTH SURFACE. ALL STONES LARGER THAN ONE INCH IN DIAMETER SHALL BE REMOVED FROM THE SURFACE OF THE SEED BED. HAND RAKING WILL BE REQUIRED IN AREAS INACCESSIBLE TO MACHINES AND HAND RAKING MAY BE REQUIRED, IF DIRECTED BY THE ENGINEER, IN ALL THE AFOREMENTIONED AREAS IF MACHINES USED DO NOT PROVIDE RESULTS EQUIVALENT TO RESULTS OBTAINED BY HAND RAKING. COST OF THIS ADDITIONAL WORK SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ROADWAY EXCAVATION, ITEM E-1.
THE ABOVE NOTE SHALL BE CONSIDERED TO BE PARTICULARLY APPLICABLE IN THE AREAS TABULATED ON SHEET NO. 14.

PLACING SOD IN DITCHES

ALL SOD PLACED IN DITCHES SHALL BE LAID WITH THE LONG EDGES OF THE STRIPS PERPENDICULAR TO THE FLOW LINE OF THE DITCH. SUCCESSIVE STRIPS SHALL BE NEATLY MATCHED AND ALL JOINTS STAGGERED OR BROKEN. THE SOD SHALL BE STAKED SECURELY WITH STAKES PLACED ON MAXIMUM TWO (2) FT. CENTERS IN ROWS NOT MORE THAN TWO (2) FEET APART. STAKES IN ADJACENT ROWS SHALL BE STAGGERED. THE STAKES SHALL BE WOOD FROM 1/2" x 3/4" x 12" TO 1" x 1" x 24", AS REQUIRED TO HOLD THE SOD, AND SHALL BE DRIVEN FLUSH WITH THE TOP OF THE SOD.

ITEM L-10 PREPARATION OF AREAS TO BE SODDED

THE SOD BED SHALL BE PREPARED IN SUCH A MANNER THAT A TWO (2) INCH LAYER OF LOOSE SOIL IS IN PLACE TO RECEIVE THE SOD. ADDITIONAL EXCAVATION SHALL BE MADE AND SOIL SHALL BE INCORPORATED, IF NECESSARY, TO BE INCLUDED IN THE UNIT PRICE BID FOR L-10 SODDING TO MEET THIS REQUIREMENT. COMMERCIAL FERTILIZER, 12-12-12, SHALL BE APPLIED AT A RATE OF 20 LBS. PER 1000 SQ. FT. OF AREA.

SCARIFICATION OF EXISTING FLEXIBLE PAVEMENT

WITHIN THE LIMITS OF CONSTRUCTION WHERE THE EXISTING FLEXIBLE PAVEMENT WILL HAVE LESS THAN SIX (6) INCHES OF FILL PLACED UPON IT, THE PAVEMENT SHALL BE THOROUGHLY SCARIFIED FOR ITS FULL DEPTH, MIXED WITH SUFFICIENT SOIL AND PROPERLY RECOMPACTED TO INSURE THE ELIMINATION OF ANY PLANES OF SEPARATION BETWEEN IT AND THE EMBANKMENT PLACED THEREON. PAYMENT FOR SCARIFICATION AS DESCRIBED ABOVE SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ITEM E-1, ROADWAY EXCAVATION.

SUBGRADE COMPACTION

THE SUBGRADE FOR DRIVES PAVED WITH B-19 OR T-70 MATERIAL SHALL BE COMPACTED FOR A DEPTH OF SIX (6) INCHES TO THE DENSITY REQUIREMENTS SHOWN IN TABLE III, ITEM E-1. PAYMENT FOR SUBGRADE COMPACTION, AS SPECIFIED ABOVE, SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ITEM E-1, ROADWAY EXCAVATION.

CONTRACTION AND EXPANSION JOINTS

ALTHOUGH SPECIFIC LOCATIONS OF CERTAIN EXPANSION AND CONTRACTION JOINTS HAVE BEEN DETAILED ON THIS PLAN, NO WAIVER OF THE SPECIFICATIONS IS INTENDED. PROVISION OF EXPANSION JOINTS AT ALL MAJOR STRUCTURES AND THE MAXIMUM SPACING BETWEEN CONTRACTION JOINTS SHALL IN ALL CASES BE IN ACCORDANCE WITH STANDARD CONSTRUCTION DRAWING T. J.

PART WIDTH CONSTRUCTION

BECAUSE OF THE NECESSITY OF BUILDING THIS PROJECT UNDER TRAFFIC AND CONSTRUCTING THE PAVEMENT PART AT A TIME, EXTREME CARE SHALL BE TAKEN TO PREVENT THE CONSTRUCTION OF A BUTT JOINT ON CENTERLINE IN THE B-19 AND I-22 COURSES. THIS SHALL BE ACCOMPLISHED BY BUILDING THE B-19 AND I-22 COURSES, PLACED WITH THE FIRST PORTION OF THE PAVEMENT BUILT, AT LEAST EIGHTEEN (18) INCHES BEYOND THE CENTERLINE AND BY SURFACING NO CLOSER THAN EIGHTEEN (18) INCHES TO THIS EDGE OF THE ABOVE COURSES. WHEN THE SECOND PORTION OF THE PAVEMENT IS BUILT, AT LEAST TWELVE (12) INCHES OF THESE PROJECTING COURSES SHALL BE BROKEN DOWN AND THOROUGHLY KEYED IN WITH THE NEWLY PLACED CORRESPONDING COURSES IN THE SECOND PORTION OF THE PAVEMENT BUILT. PAYMENT FOR THIS OPERATION SHALL BE INCLUDED IN THE UNIT PRICES BID FOR THE PERTINENT PAVEMENT ITEMS.

JOINT LEGEND

TYPES OF PAVEMENT JOINTS TO BE USED ARE SPECIFIED BY THE FOLLOWING LEGEND:

- LJ = STANDARD LONGITUDINAL JOINT
- KJ = STANDARD KEY JOINT WITHOUT TIE BARS
- CJ = STANDARD CONTRACTION JOINT
- EJ = EXPANSION JOINT WITHOUT DOWELS. (LOCATED ON RADIAL LINES; LENGTH OF JOINT = 2 FT.)
- E = STANDARD EXPANSION JOINT

FENCE LEGEND

THE ABBREVIATIONS SHOWN FOR FENCE ON THE RIGHT OF WAY DRAWINGS ARE TO DESIGNATE THE FOLLOWING DETAILS OF CONSTRUCTION:

- IAPA = INTERMEDIATE ANCHOR POST ASSEMBLY
- CPA = CORNER POST ASSEMBLY
- EPA = END POST ASSEMBLY

REMOVAL OF TREES AND STUMPS

ALL TREES AND STUMPS LYING WITHIN THE CONSTRUCTION LIMITS OF THIS PROJECT SHALL BE REMOVED UNDER THE LUMP SUM PRICE BID FOR ITEM E-9, REMOVAL OF TREES AND STUMPS, EXCEPT THAT THOSE TREES AND STUMPS FOR WHICH PROTECTION AND PRESERVATION WORK IS INDICATED ELSEWHERE IN THESE PLANS SHALL NOT BE REMOVED.
AN APPROXIMATE ESTIMATE OF THE NUMBER OF TREES AND STUMPS TO BE REMOVED IS SHOWN ON SHEET NO. 13.
THIS ESTIMATE IS APPROXIMATE AND THE STATE OF OHIO RESERVES THE RIGHT TO ORDER THE REMOVAL OF ADDITIONAL TREES OR STUMPS OUTSIDE OF THE LIMITS OF CONSTRUCTION BUT WITHIN THE RIGHT-OF-WAY AND/OR EASEMENT LINES. PAYMENT FOR THE REMOVAL OF THESE ADDITIONAL TREES OR STUMPS SHALL BE INCLUDED IN THE LUMP SUM PRICE BID FOR ITEM E-9, REMOVAL OF TREES AND STUMPS.

DRAINAGE OF BASE MATERIAL

WHERE THE BASE MATERIAL IS DRAINED BY I-9 STONE UNDERDRAINS OR BY EXTENSIONS OF THE SUBBASE THROUGH THE SHOULDERS TO THE FILL SLOPE OR THE DITCH LINE, THE CONTRACTOR SHALL FINISH, SEED, AND MULCH THE SLOPES SO AS NOT TO IMPEDE DRAINAGE OF THE BASE MATERIAL. THE ACTUAL AREA OF THE OUTCROP OF THE SUBBASE MATERIAL OR THE I-9 UNDERDRAINS SHALL NOT BE SEEDED.

RIPRAP, USING 6" REINFORCED CONCRETE SLAB, AS PER PLAN

IN ADDITION TO MEETING THE GENERAL REQUIREMENTS OF SECTION I-10.03 AND I-10.05, THE RIPRAP FURNISHED FOR THIS ITEM SHALL BE A 6-INCH REINFORCED CONCRETE SLAB, REINFORCED WITH BARS OR FABRICATED REINFORCEMENT EQUIVALENT TO 3/8-INCH ROUND BARS SPACED AT TWO-FOOT CENTERS, TWO DIRECTIONS, AND PLACED APPROXIMATELY MIDWAY BETWEEN THE TOP AND BOTTOM OF THE SLAB. FORMED CONSTRUCTION JOINTS MAY BE USED SUBJECT TO THE APPROVAL OF THE ENGINEER. REINFORCEMENT SHALL EXTEND THROUGH ALL CONSTRUCTION JOINTS.
THE REQUIREMENTS OF SEC. I-10.05 FOR DEPRESSED GROOVES AND THICKENED BOTTOM EDGES IN THIS ITEM SHALL BE WAIVED.
IN LIEU THEREOF, CUT-OFF WALLS AS DETAILED ON THE PLANS SHALL BE PROVIDED AND PAYMENT THEREFOR SHALL BE INCLUDED IN THE UNIT PRICE BID FOR THIS ITEM.

DISPOSAL OF CATCH BASIN & INLET CASTINGS

CASTINGS OF EXISTING CATCH BASINS, INLETS AND OTHER DRAINAGE STRUCTURES, WHICH ARE TO BE REMOVED OR REPLACED, SHALL BE REMOVED AND HANDLED IN SUCH A MANNER AS TO PREVENT THEIR BEING DAMAGED. AFTER REMOVAL THE CASTINGS SHALL BE STORED WITHIN THE RIGHT OF WAY AT LOCATIONS DETERMINED BY THE ENGINEER FOR DISPOSAL BY STATE FORCES.

PIPE FOR SUBGRADE DRAINAGE

TEN (10) LIN. FT. OF 8" CORRUGATED METAL PIPE, SEC. M 6.4 (C) SHALL BE FURNISHED AND PLACED BY THE CONTRACTOR, IN MANHOLES, CATCH BASINS AND INLETS WHERE INDICATED ON THE PLANS. PAYMENT SHALL BE MADE AT THE PRICE BID PER LINEAL FOOT FOR PIPE UNDERDRAIN OUTLETS.

PIPE

WHEN BELL AND SPIGOT PIPE IS USED, ANY NECESSARY PIPE CUT-OFFS WILL BE MADE AT THE SPIGOT END OF THE LENGTH OF PIPE ADJACENT TO THE END LENGTH. WHEN TONGUE AND GROOVE PIPE IS USED, THE LENGTH OF PIPE NEXT TO THE END LENGTH SHALL BE CUT AND BUTT JOINT FORMED WITH CLASS "E" CONCRETE 6" MINIMUM THICKNESS COLLAR, 12" IN LENGTH. THE COST OF THE JOINT AND COLLAR SHALL BE INCLUDED IN THE CONTRACT UNIT PRICE BID FOR THE PERTINENT PIPE ITEM.

SEALING OF PIPE JOINTS

WHERE CONNECTIONS ARE MADE BETWEEN RIGID AND FLEXIBLE PIPE SECTIONS OR BETWEEN PIPE SECTIONS OF DIFFERENT KIND OR TYPE OF END FABRICATION, WHETHER REQUIRED BY THE PLANS, ARISING FROM PERMISSIBLE USE OF OPTIONAL MATERIALS, OR ENCOUNTERED IN CONNECTION TO EXISTING FACILITIES, THE JOINT SHALL BE SEALED, IF SEALING IS REQUIRED BY THE SPECIFICATIONS, BY MEANS OF A CLASS "E" CONCRETE COLLAR HAVING A MINIMUM THICKNESS OF 6 INCHES AND A MINIMUM LENGTH OF 12 INCHES. PAYMENT FOR SEALING AS DESCRIBED ABOVE SHALL BE INCLUDED IN THE UNIT PRICE BID FOR THE PERTINENT PIPE ITEM.

PLUGGING PIPE

THE UPSTREAM ENDS OF ALL PIPE OR TILE LINES INTERCEPTED BY EARTHWORK OPERATIONS AND, WHERE INDICATED, THE ENDS OF PIPE LINES TO BE ABANDONED IN PLACE SHALL BE EFFECTIVELY BLOCKED AND COVERED. BROKEN PIECES AND PORTIONS OF PIPE OR TILE SHALL BE REMOVED UNTIL A WHOLE LENGTH IS ENCOUNTERED WHICH SHALL BE BLOCKED WITH CONCRETE, FLAT STONE OR BRICK LAID IN MORTAR, OR A PRECAST CLAY OR CONCRETE STOPPER. PAYMENT FOR THE ABOVE WORK SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ITEM E-1, ROADWAY EXCAVATION.

REMOVAL OF EXISTING PIPE

THE REMOVAL OF ALL EXISTING PIPE DRAINS WITHIN THE LIMITS OF PROPOSED EXCAVATION ITEMS SHALL BE INCLUDED FOR PAYMENT IN THE UNIT PRICES BID FOR THE RESPECTIVE EXCAVATION ITEMS, UNLESS OTHERWISE ITEMIZED IN THE PLANS.

CONNECTIONS TO EXISTING PIPE

AT PLACES WHERE THE PLANS PROVIDE FOR PROPOSED DRAINAGE PIPE TO BE CONNECTED TO EXISTING PIPES, IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO LOCATE THE EXISTING PIPE BOTH AS TO LINE AND GRADE BEFORE HE STARTS TO LAY THE PROPOSED PIPE. THE COST OF THIS OPERATION SHALL BE INCLUDED IN THE UNIT PRICE BID FOR THE PERTINENT PIPE ITEM.

GENERAL NOTES (CONT.)

REMOVAL OF EXISTING HOUSE DRAINS

THE REMOVAL OF ALL EXISTING HOUSE CONNECTIONS, WHICH INCLUDES SANITARY, YARD, ROOF, BASEMENT OR OTHER SIMILAR PIPE DRAINS WITHIN THE ROADWAY CONSTRUCTION LIMITS SHALL BE CLASSIFIED AND PAID FOR AS E-1 ROADWAY EXCAVATION, UNLESS OTHERWISE ITEMIZED FOR PAYMENT IN THE PLANS.

EXISTING HOUSE DRAIN CONNECTIONS

ALL EXISTING HOUSE DRAINS, WHICH INCLUDE SANITARY, YARD, ROOF, BASEMENT, OR OTHER SIMILAR HOUSE DRAINS NOW IN USE WHICH ARE DISTURBED BECAUSE OF THE HIGHWAY IMPROVEMENT, SHALL BE REPLACED BY THE CONTRACTOR AT THE UNIT PRICE BID FOR EACH PIPE ITEM FURNISHED AND PLACED. IF THE EXISTING SEWER IS TO BE ABANDONED, THEN A SATISFACTORY HOUSE CONNECTION SHALL BE PROVIDED TO THE NEW SEWER. WHERE AN EXISTING HOUSE IS TO BE REMOVED, THE UPGRADE END OF THE EXISTING HOUSE CONNECTION SHALL BE PLUGGED WITH A PRECAST VITRIFIED OR CONCRETE STOPPER, AND ACCURATELY REFERENCED IF THE EXISTING HOUSE CONNECTION REMAINS SATISFACTORY FOR FUTURE USE.

PAYMENT FOR PLUGGING SPECIFIED SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ROADWAY EXCAVATION, ITEM E-1.

THE FOLLOWING ESTIMATED QUANTITIES OF PIPE, FOR REPLACEMENTS DESCRIBED ABOVE, HAVE BEEN CARRIED TO THE GENERAL SUMMARY:

ITEM I-2 4" CLASS "B" STORM SEWERS - LIN. FT.
6" CLASS "B" STORM SEWERS - LIN. FT.

PROPOSED HOUSE DRAIN CONNECTIONS

THE ENGINEER WILL NOTIFY PROPERTY OWNERS IN ADVANCE OF CONSTRUCTION THAT IF THEY CONTEMPLATE NEW HOUSE CONNECTIONS TO THE PROPOSED SEWER THE PROPERTY OWNER MUST FURNISH, AT HIS SOLE COST, TEES OR WYES OF THE PROPER SIZE AND MATERIAL TO THE CONTRACTOR. THE CONTRACTOR WILL THEN INSTALL THE TEES OR WYES AS HE PROCEEDS WITH LAYING THE SEWER, AND PAYMENT FOR THE WORK INVOLVED WILL BE AT THE SAME RATE AS THOUGH HE WERE FURNISHING AND LAYING STRAIGHT PIPE.

TO OBTAIN A HOUSE CONNECTION TO EITHER AN EXISTING SEWER THAT IS TO REMAIN OR TO A PROPOSED SEWER, THE PROPERTY OWNER OR HIS AGENT, AT HIS SOLE COST, SHALL FURNISH ALL MATERIAL AND LABOR REQUIRED TO INSTALL THE HOUSE CONNECTION FROM THE CARRIER SEWER TO A POINT BEYOND THE LIMITS OF ROADWAY CONSTRUCTION.

THE CONTRACTOR MUST COOPERATE WITH THE PROPERTY OWNER OR HIS AGENT TO GIVE SAID PROPERTY OWNER OR HIS AGENT AMPLE OPPORTUNITY FOR EXTENDING SAID SEWER CONNECTION FROM THE TEE OR WYE TO A POINT BEYOND ROADWAY CONSTRUCTION LIMITS. THE NECESSARY HOUSE CONNECTIONS SHALL BE INSTALLED BY THE PROPERTY OWNER OR HIS AGENT AT NO COST TO THE CONTRACTOR, OTHER THAN THE COST OF COOPERATION IN SCHEDULING HIS WORK WHICH SAID COST SHALL BE ASSUMED BY THE CONTRACTOR AND SHALL BE INCLUDED IN THE UNIT PRICES BID FOR VARIOUS SEWER ITEMS.

EROSION CONTROL

ITEMS I-10, I-14, AND L-10 ARE PROVIDED IN THESE PLANS FOR EROSION CONTROL. ROCK OF A STABLE NATURE WILL NOT BE REMOVED IN ORDER TO PLACE ANY OF THESE ITEMS. THE ENGINEER SHALL CHECK AND NON-PERFORM QUANTITIES OR ADJUST LOCATIONS AND QUANTITIES FOR THESE ITEMS WHERE INDICATED BY FIELD CONDITIONS DURING CONSTRUCTION.

FIELD DRAINS

ALL FARM TILES WHICH ARE ENCOUNTERED DURING CONSTRUCTION SHALL BE PROVIDED WITH UNOBSTRUCTED OUTLETS UNDER THE DIRECTION OF THE ENGINEER.

EXISTING COLLECTORS AND ISOLATED FARM TILES WHICH ARE ENCOUNTERED ABOVE THE ELEVATION OF THE ROADWAY DITCHES SHALL BE OUTLETTED INTO THE ROADWAY DITCH. THE OPTIMUM OUTLET ELEVATION SHALL BE, IF POSSIBLE, ONE FOOT ABOVE THE FLOWLINE ELEVATION OF THE DITCH.

THE LOCATION, TYPE, SIZE, AND GRADE OF REQUIRED REPLACEMENTS SHALL BE DETERMINED BY THE ENGINEER DURING CONSTRUCTION AND PAYMENT SHALL BE MADE ON FINAL MEASUREMENTS. ESTIMATED QUANTITIES HAVE BEEN INCLUDED IN THE DRAINAGE SUMMARY FOR THE WORK NOTED ABOVE.

ITEM I-9, STONE UNDERDRAINS, NO. 2

STONE UNDERDRAINS SHALL BE STAGGERED AT FIFTY (50) FOOT INTERVALS, ONE HUNDRED (100) FOOT ON EACH SIDE, OF NORMAL CROWNED SECTIONS AND AT FIFTY (50) FOOT INTERVALS ON THE LOW SIDE ONLY OF SUPERELEVATED SECTIONS, EXCEPT WHERE I-4 UNDERDRAINS HAVE BEEN PROVIDED.

WATER LINES

FOR NOTES REGARDING CONSTRUCTION OF WATER LINES, SEE SHEET 84.

TRAFFIC MAINTENANCE (CONTINUED)

THE CONTRACTOR SHALL SO PLAN HIS OPERATIONS THAT THE LIMITS AND DURATION OF USAGE OF TEMPORARY ROADWAYS SURFACED WITH AGGREGATE AND STABILIZED WITH CALCIUM CHLORIDE SHALL BE HELD TO AN ABSOLUTE MINIMUM, AND IN ALL CASES SHALL BE SUBJECT TO THE APPROVAL OF THE ENGINEER.

SHOULD THE CONSTRUCTION SEQUENCE INVOLVE BRIDGE CONSTRUCTION OVER TRAVELED LANES ON U.S.R. 250, THE CONTRACTOR SHALL SAFEGUARD THE TRAVELING PUBLIC BY PROVIDING PLATFORMS, NETS, OR OTHER SUITABLE PROTECTION ABOVE THE TRAVELED LANES. PAYMENT FOR THIS PROTECTION SHALL BE INCLUDED IN THE LUMP SUM BID FOR "MAINTAINING TRAFFIC"

PAYMENT FOR CONSTRUCTION, MAINTENANCE, AND SUBSEQUENT REMOVAL, WHEREVER REQUIRED, OF TEMPORARY ROADWAYS NOT SEPARATELY ITEMIZED UNDER ITEM S-15, EXCEPT FOR FURNISHING AND PLACING ITEMS M-10 AND T-10, SHALL BE INCLUDED IN THE LUMP SUM PRICE BID FOR "MAINTAINING TRAFFIC"

CHANGES IN TYPICAL SECTIONS

SUBSEQUENT TO COMPLETION OF DETAILED PLANS FOR THIS PROJECT, THE WIDTH OF THE PAVED SHOULDER ON THE MEDIAN SIDE OF THE PROPOSED PAVEMENT WAS REDUCED FROM 5 TO 4 FEET. THE CROSS SECTIONS, AS DRAWN, DO NOT REFLECT THIS DECREASE IN WIDTH OF THE PROPOSED PAVEMENT TRENCH.

CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE TYPICAL SECTIONS AND NECESSARY ADJUSTMENTS IN EARTHWORK QUANTITIES WILL BE MADE AT THE TIME OF FINAL MEASUREMENT.

PROPOSED STRUCTURE

Type: Continuous Steel Beam with Reinf. concrete deck. Reinf. concrete pier Bents and Stub Abutments.
Spans: 40'-0", 50'-0", 50'-0", 40'-0" c/c Bearings
Roadway: 39'-8" b/t of 1'-2" curbs on Left Bridge. Variable on Right Bridge
Load Frequency: CF 400 (57)
Skew: 23°-12' R.F.
Wearing Surface: 1" Monolithic Concrete
Approach Slabs: AS-1-54 (25'-0" Long)
Alignment: Tangent

PROPOSED STRUCTURE

Type: Continuous steel beam with reinf. conc. deck. Reinf. conc. pier bents and stub abutments.

Spans: 58'-0", 82'-6", 82'-6", 58'-0" c/c Brgs.

Roadway: 24'-0" f/f of 2'-3" Safety Curbs.

Load Frequency: CF 130 (57)

Skew: 6°-28' Right Forward

Wearing Surface: 3/4 Monolithic Concrete

Approach Slabs: AS-1-54 (25' Long)

Alignment: Tangent

TYPICAL SECTION TEMPORARY RUN-AROUND

ESTIMATED QUANTITIES

Item S-15 Temporary Run-Around Road, using Class "A" Pavement, as per plan. — Lump Sum

Item T-10 Traffic compacted surface course for Temporary Traffic Lanes — 450 Cu. Yds.

Item M-10 Calcium chloride furnished and applied for Temporary Traffic Lanes — 9 Tons

Note: Item S-15 Temporary run-around shall include the reshaping and restoring of ground to original contours through areas where the run-around is constructed on temporary right of way, in addition to other removal requirements of Item S-15.09.

WATER LINE NOTES FOR US 250 & GALLOWAY RD.

Water line work shall be scheduled so that the lines on US 250 and Galloway Rd. shall not be out of service at the same time.

All new cast iron pipe shall be Class 150 pipe and have mechanical joints.

EXISTING 12" LINE - GALLOWAY RD.

Existing line from Sta. 42+00 to 57+00 Galloway Rd. to be abandoned and ends plugged after new 12" water line is in operation. The existing line from Sta. 48+75 to 51+25 is to be removed and disposed of and remaining ends plugged. Payment for the above is included in the unit price bid for Item I-124.03, 12" C.I.P. New Water Line.

EXISTING 6" LINE - US 250

Existing line from Sta. 37+50 to 59+00 to be abandoned and ends plugged after new 6" water line is in operation. The existing line is to be removed and disposed of between points where the cover will be less than 3'-0", and remaining ends plugged. All fittings, valves, hydrants and castings are to be stored on the site for disposal by others. Payment for the above is included in the unit price bid for Item I-124.03, 6" C.I.P. New Water Line.

SERVICE BRANCHES

New service branches include brass or bronze corporation stop with Mueller thread inlet, and an outlet to receive copper service tubing. Service lines shall be Type "K" copper. Existing service branches between Sta. 38+00 and 40+50, US 250, are to be replaced with ¾" lines. Existing service branch at Sta. 55+35, US 250, to be replaced with 1" line. Payment for the above shall be at the contract unit price per linear foot for Item I-124.07, New Service Branches.

Existing meters and meter boxes (30" length of 18" tile with cover casting, meter and valve are to be removed and reset 5' inside the proposed R/W line and over the existing house connection. Payment shall be at the contract unit price each for Item I-124.11, Water Meters and Boxes Removed and Reset.

New Service Branches under US 250 are to be installed in 1½" wrought iron pipe conduits; conduits to extend 8' beyond edge of proposed pavement. Payment shall be at the contract unit price per linear foot for Service Branch Conduit.

Existing service lines between Sta. 42+00 and 52+00, US 250, to be abandoned as homes are vacated and all valves, meters and castings are to be removed by the local water authority.

FOUNDATION SOUNDINGS :

Foundation design and foundation quantities are based on a study of rod soundings and soil sampling soundings made at the site. This sounding information may be inspected in the office of the Bureau of Bridges in Columbus or in the Division Office, but the State does not guarantee the accuracy thereof.

PROPOSED STRUCTURE

Type: Continuous Steel Beam with reinf. concrete deck. Reinf. concrete Pier Bents and Stub Abutments.

Spans: 40'-0", 50'-0", 50'-0", 40'-0" ℅ Bearings

Roadway: 39'-8"f/f of 1'-2" curbs on Left Bridge Variable on Right Bridge.

Load Frequency: CF 400 (57)

Skew: 23°-12' R.F.

Wearing Surface: 1" Monolithic Concrete

Approach Slabs: AS-1-54 (25'-0" Long)

Alignment: Tangent

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS-1-54 "Reinforced Concrete Approach Slabs", revised 12-1-54, CSB-2-56 "Continuous Steel Beam Bridge" (sheet Nº 3 of 6 sheets), revised 2-2-59, AR-1-57, "Aluminum Railing with Concrete Parapet, revised 2-2-59, and to Supplemental Specification S-101 dated 12-2-59.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with current revisions thereof.

EXCAVATION AND BACKFILL: Excavation quantity includes the removal of fill material between the surface of proposed embankment and the bottom of the footings. Backfill behind the abutments shall be compacted in accordance with the requirements for embankment compaction.

PILES shall be driven with a hammer of not less than 11,000 ft lbs. per blow to firm contact with rock. If the length of penetration is approximately equal to the depth of rock according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in Sec. S-18.05 is not less than the following value for a pile hammer of the indicated energy rating:

For the abutment piles:
34 tons per pile using an 11,000 ft-lb. hammer
31 tons per pile using a 15,000 ft-lb or greater hammer

For the pier piles:
45 tons per pile using an 11,000 ft-lb. hammer
40 tons per pile using a 15,000 ft-lb. or greater hammer

If the energy rating of the hammer is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 30 tons per pile.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of concrete shall progress upgrade. The slab may be placed in sections between transverse construction joints, which are parallel to the transverse reinforcing steel and are located near the center of any span.

Welding of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the contractor be made in the shop. Class "B" welds are shown thus B

Machine Finish The concrete bridge deck shall be finished as specified in the proposed note, "Machine Finishing of Bridge Deck Slabs".

STEEL: See Proposal regarding A-373 Steel.

*Included with Item S-14 for payment

BAR SIZE is indicated in the bar mark. The first digit where three digits are used and the first two digits where four are used, indicate the bar size number. For example, a P501 is a No. 5 size bar, and a P1101 is a No. 11 size.

REPLACEMENT BARS: If reinforcing bars are fabricated from stock which has previously been tested and approved by the Ohio Highway Testing Laboratory, test samples as provided in Sec. S-4.02 need not be furnished and replacement bars will not be required.

SPIRAL REINFORCING BARS: The "Length" shown in the steel list for the spiral bars is the distance from the top of the footing to the bottom of the pier cap. The "No. of Turns" shown is the "Length" divided by the pitch, plus 3 turns (total number of closed coils) expressed as the nearest whole number. Spiral reinforcing bars shall not have deformations but shall in other respects conform to Item S-4. 1½ closed coils shall be provided at the ends of each spiral unit.
Four (or three) steel channel, tee or angle spacers, weighing approximately 0.68 lb. per lin. ft. of spacer, shall be provided for each spiral unit. They shall be equally spaced along the periphery of the coil. The number of pounds of these spacers, based on 0.68 lb. per lin. ft. will be paid for as reinforcing steel and is included in the tabulated quantity of spiral bars.

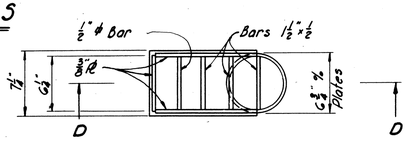
CURB PLATE DETAILS

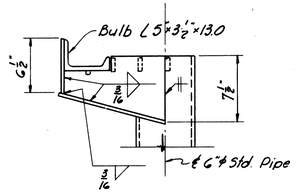
Omit shop coat on all portions of end dam. Portions in contact with steel or with concrete shall not be painted. All other portions shall be cleaned and given the shop coat in the field as well as the two field coats.

This contact surface shall not be painted and shall be lubricated with flake graphite prior to placing of backwall concrete.

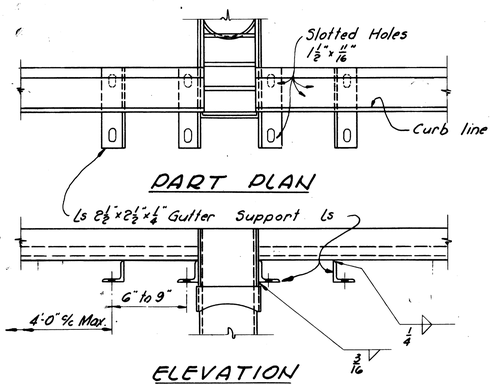
⅝"×2" bolts at not more than 2'-0" ℄ with nuts tack-welded to underside of lower angle. 1 1/16" ϕ holes in upper angle. Center ⅝" bolts in 1 1/16" holes. Apply flake graphite between washers and angle. Turn bolt tight and release one-half turn. Remove bolts as soon as concrete has set, preferably within two hours after placing, to avoid damage due to temperature expansion or contraction of superstructure. Fill holes with bituminous material.



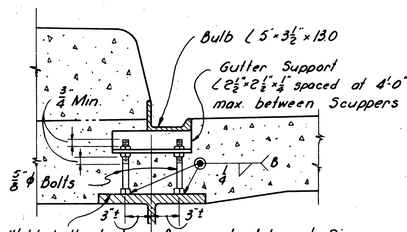
SCUPPER PLAN



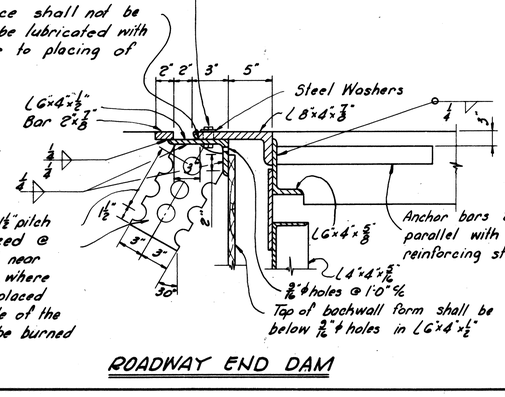
SCUPPER ELEVATION



ELEVATION
GUTTER & SCUPPER DETAILS

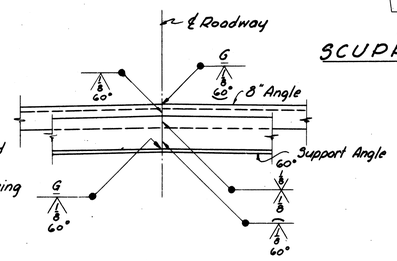


GUTTER SUPPORT



2" ϕ holes, 1½" pitch
6"×½"×1'-0" plates spaced @ approx. 1'-3" ℄ except near joints in the angle, where the plates shall be placed within 6" of each side of the joint. The holes maybe burned in the plates.

ROADWAY END DAM



WELDED BUTT JOINT IN SUPERSTRUCTURE
END DAM ANGLES AT ℄ OF ROADWAY

A welded butt joint in the end dam, along the centerline of roadway, will be required for that portion of the end dam attached to the superstructure. The portion attached to the backwall shall be placed in segments not less than 6'-0" in length, with one of the joints at the apex of the crown. These shall be closely butted but shall not be welded.

Gutters shall be accurately adjusted for alignment and grade, with allowance for dead load deflection, before concrete is placed.

For bearing plate details see CSB 2-56 (Sheet 3 of 6), revised 2-2-59.

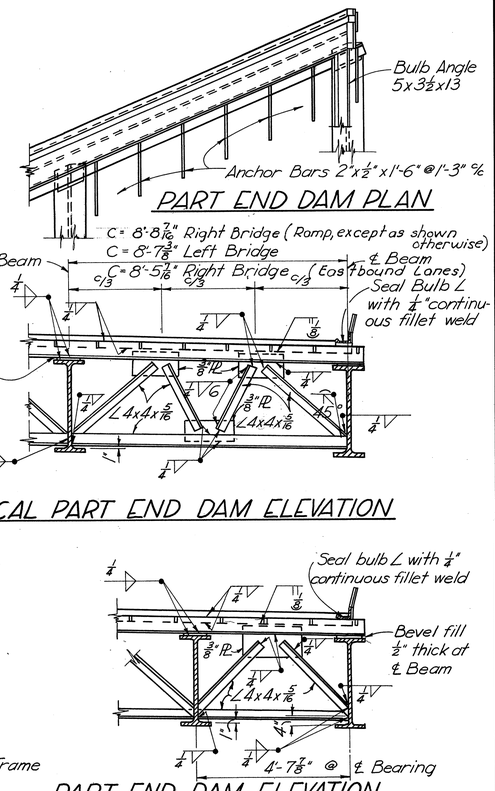
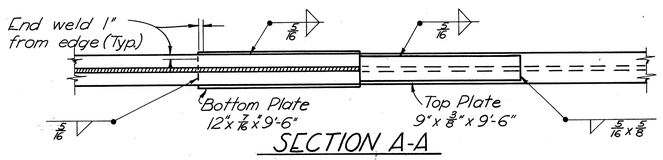
STEEL FRAMING PLAN



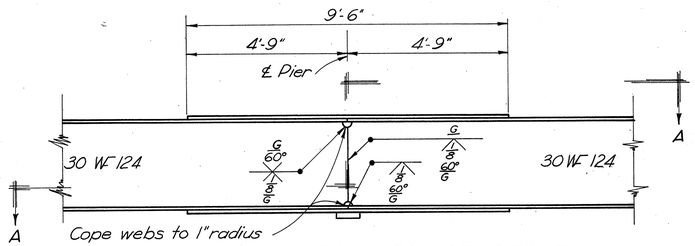
PART END DAM PLAN

TYPICAL PART END DAM ELEVATION

PART END DAM ELEVATION FORWARD ABUTMENT RIGHT BRIDGE FASCIA BEAM



SECTION A-A



ELEVATION BEAM SPLICE DETAIL

BEAM SPLICE WELDING PROCEDURE :

1. Raise end of beam at Pier 2 (or Pier 5) ⅝".
2. Butt weld beam flanges and web at Pier 1 (or Pier 4) using the following sequence: make two passes on each flange, then two on the web; repeat, using one pass at each location, until welds are completed.
3. Weld top and bottom flange moment plates at Pier 1 (or Pier 4)
4. Lower end of beam at Pier 2 (or Pier 5)
5. Make splice at Pier 2 (or Pier 5) and Pier 3 (or Pier 6) in the same manner raising the end of the beams ⅝" at Pier 3 (or Pier 6) and ⅜" at the Forward Abutments.

PAINTING :

After erection and after the shop coat has been cleaned and, where necessary, repainted in accordance with Sec. 518.04, an additional coat of the same paint as used in the shop shall be applied over the outside face of the outside steel beams and all sides of the bottom flange.

CAMBERING: No camber is required. Fabricate beams with convex flange up. The dead load deflection is ⅛" in the end spans and ¼" in the center spans.

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS-1-54 "Reinforced Concrete Approach Slabs" revised 12-1-54, RB-1-55 "Rockers and Bolsters" revised 2-2-59, AR-1-57 Aluminum Railing with Concrete Parapet", revised 2-2-59, CSB 2-56, "Continuous Steel Beam Bridges" revised 2-2-59 and to Supplemental Specification S-101, dated 12-2-59.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57 together with current revisions thereof.

PILES shall be driven with a hammer of not less than 11,000 ft-lbs. per blow to firm contact with shale. If the length of penetration is approximately equal to the depth of firm shale according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in Sec. S-18.05 is not less than the following value for a pile hammer of the indicated energy rating:

For the abutment piles:

50 tons per pile using an 11,000 ft-lb. hammer

45 tons per pile using a 15,000 ft-lb. or greater hammer.

If the energy rating is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 30 tons per pile for the abutment piles.

STEEL: See Proposal regarding A-373 Steel.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of the concrete shall progress upgrade. The slab may be placed in sections, between transverse construction joints which are parallel to the transverse reinforcing steel and are located near the center of any span.

MACHINE FINISH: The concrete bridge deck shall be finished as specified in the proposal note "Machine Finishing of Bridge Deck Slabs".

WELDING of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the contractor, be made in the shop. Class "B" welds are shown thus: B

EXCAVATION AND BACKFILL: Excavation quantity includes the removal of till material between the surface of the proposed embankment and the bottom of the footings. Backfill behind the abutments shall be compacted in accordance with the requirements for embankment compaction.

Immediately after the pier excavation is completed, the area to be in contact with the footing concrete shall be given an application of bituminous material (¼ gal. per square yard). This bituminous material to be one of the following emulsions or cut-backs as per Item M-5 of the specifications: MC-4, MC-5, RC-4, RC-5, MS-2 or RS-2.

PIER FOOTINGS shall extend a minimum of 3" into shale or to the elevation shown, whichever is lower.

FOUNDATION BEARING PRESSURE: Pier footings are designed for a maximum bearing pressure of 4.0 tons per sq. ft.

BAR SIZE is indicated in the bar mark. The first digit where three digits are used and the first two digits where four are used, indicate the bar size number. For example a P501 is a No. 5 size bar, and a P1101 is a No. 11 size.

REPLACEMENT BARS: If reinforcing bars are fabricated from stock which has previously been tested and approved by the Ohio Highway Testing Laboratory, test samples as provided in Sec. S-4.02 need not be furnished and replacement bars will not be required.

SPIRAL REINFORCING BARS: The "Length" shown in the steel list for the spiral bars is the distance from the top of the footing to the bottom of the pier cap. The "No. of Turns" shown is the "length" divided by the pitch, plus 3 turns (total number of closed coils), expressed as the nearest whole number. Spiral reinforcing bars shall not have deformations but shall in other respects conform to Item S-4. 1½ closed coils shall be provided at the ends of each spiral unit.

Four (or three) steel channel, tee or angle spacers, weighing approximately 0.68 lb. per lin. ft. of spacer shall be provided for each spiral unit. They shall be equally spaced along the periphery of the coil. The number of pounds of these spacers, based on 0.68 lb. per lin. ft., will be paid for as reinforcing steel and is included in the tabulated quantity of spiral bars.

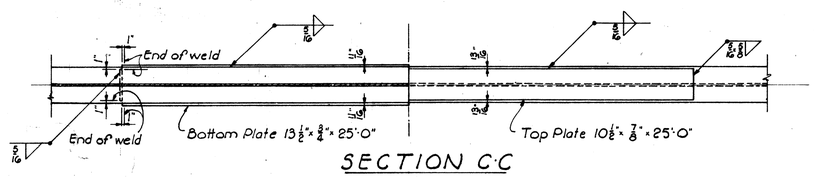
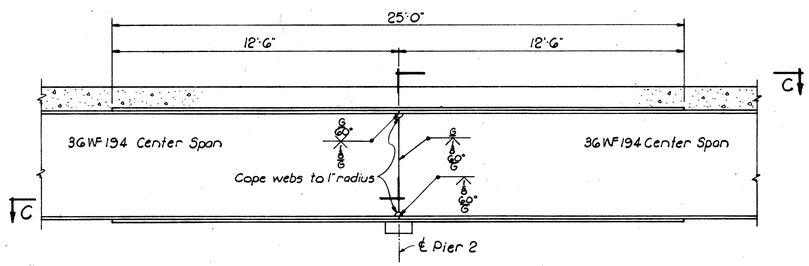
BEAM SPLICE DETAIL (PIERS 1 & 3)



SECTION C-C



ELEVATION

BEAM SPLICE DETAIL (PIER 2)

BEAM SPLICE WELDING PROCEDURE:

1. Raise end of beam at Pier 2, 2⅛"
2. Butt weld beam flanges and web at Pier 1 using the following sequence: Make two passes on each flange, then two on the web; repeat, using one pass at each location, until welds are completed.
3. Weld top and bottom flange moment plates at Pier 1.
4. Lower end of beam at Pier 2.
5. Make splice at Pier 2 and Pier 3 in the same manner raising the end of the beams 3" at Pier 3 and ¾" at the Forward Abutment.

PAINTING:

After erection and after the shop coat has been cleaned and, where necessary, repainted in accordance with Sec. 8.04, an additional coat of the same paint as used in the shop shall be applied over the outside face of the outside steel beams and all sides of the bottom flange.

CAMBERING of beams is required in accordance with the following table.

DEFLECTION AND CAMBER

LOCATION	INTERIOR BEAMS				EXTERIOR BEAMS			
	SPAN 1	SPAN 2	SPAN 3	SPAN 4	SPAN 1	SPAN 2	SPAN 3	SPAN 4

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS·1·54 "Reinforced Concrete Approach Slabs", revised 12·1·54, RB·1·55 "Rockers and Bolsters" revised 2·2·59, AR·1·57 Aluminum Railing with Concrete Parapet", revised 2·2·59, CBB·2·56, "Continuous Steel Beam Bridge", revised 2·2·59 and Supplemental Specification 5·101, dated 12·2·59.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9·1·57 together with current revisions thereof.

BAR SIZE is indicated in the bar mark. The first digit where three digits are used and the First two digits where four are used, indicate the bar size number. For example a P501 is a No. 5 size bar, and a P1101 is a No.11 size.

REPLACEMENT BARS: If reinforcing bars are fabricated from stock which has previously been tested and approved by the Ohio Highway Testing Laboratory, test samples as provided in Sec. 5·4.02 need not be furnished and replacement bars will not be required.

SPIRAL REINFORCING BARS: The "Length" shown in the steel list for the spiral bars is the distance from the top of the footing to the bottom of the pier cap. The "No. of Turns" shown is the "length" divided by the pitch, plus 3 turns (total number of closed coils), expressed as the nearest whole number. Spiral reinforcing bars shall not have deformations but shall in other respects conform to Item 5·4. 1½ closed coils shall be provided at the ends of each spiral unit.
Four (or three) steel channel, tee or angle spacers, weighing approximately 0.68 lb. per lin. ft. of spacer shall be provided for each spiral unit. They shall be equally spaced along the periphery of the coil. The number of pounds of these spacers, based on 0.68 lb. per lin. ft., will be paid for as reinforcing steel and is included in the tabulated quantity of spiral bars.

PILES shall be driven with a hammer of not less than 11,000 ft·lbs. per blow to firm contact with shale. If the length of penetration is approximately equal to the depth of firm shale according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in Sec. 5·18.05 is not less than the following value for a pile hammer of the indicated energy rating:
For the abutment piles:
50 tons per pile using an 11,000 ft·lb. hammer
45 tons per pile using a 15,000 ft·lb. or greater hammer.
If the energy rating is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 30 tons per pile for the abutment piles.

STEEL: See Proposal regarding A·373 Steel.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of the concrete shall progress upgrade. The slab may be placed in sections, between transverse construction joints which are parallel to the transverse reinforcing steel and are located near the center of any span.

MACHINE FINISH: The concrete bridge deck shall be finished as specified in the proposal note, "Machine Finishing of Bridge Deck Slabs."

WELDING of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the contractor, be made in the shop. Class "B" welds are shown thus: B

EXCAVATION AND BACKFILL

EXCAVATION AND BACKFILL: Excavation quantity includes the removal of fill material between the surface of the proposed embankment and the bottom of the footings. Backfill behind the abutments shall be compacted in accordance with the requirements for embankment compaction. Immediately after the pier excavation is completed, the area to be in contact with the footing concrete shall be given an application of bituminous material (¼ gal. per square yard). This bituminous material to be one of the following emulsions or cut-backs as per item M·5 of the specifications: MC·4, MC·5, RC·5, MS·2 or RS·2.

PIER FOOTINGS shall extend a minimum of 3" into solid shale or to the elevation shown, whichever is lower.

FOUNDATION BEARING PRESSURE: Pier footings are designed for a maximum bearing pressure of 6.0 tons per sq. ft.

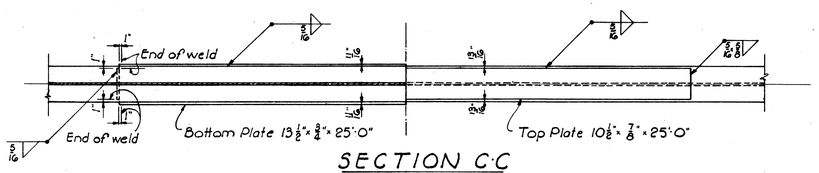
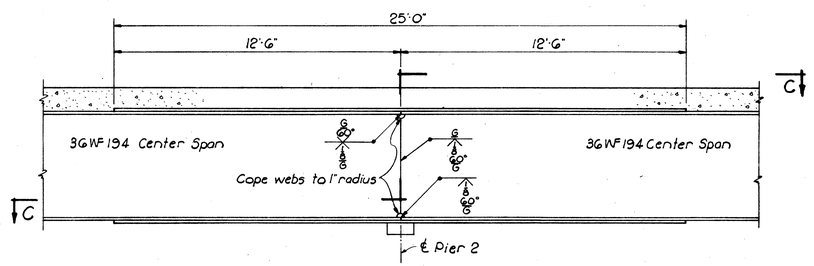
BEAM SPLICE DETAIL (PIERS 1 & 3)



SECTION C-C



ELEVATION

BEAM SPLICE DETAIL (PIER 2)

BEAM SPLICE WELDING PROCEDURE:

1. Raise end of beam at Pier 2, 2⅛".
2. Butt weld beam flanges and web at Pier 1 using the following sequence: Make two passes on each flange, then two on the web; repeat, using one pass at each location, until welds are completed.
3. Weld top and bottom flange moment plates at Pier 1.
4. Lower end of beam at Pier 2.
5. Make splice at Pier 2 and Pier 3 in the same manner raising the end of the beams 3" at Pier 3 and ¾" at the Forward Abutment.

PAINTING:

After erection and after the shop coat has been cleaned and, where necessary, repainted in accordance with Sec. 8.04, an additional coat of the same paint as used in the shop shall be applied over the outside face of the outside steel beams and all sides of the bottom flange.

CAMBERING of beams is required in accordance with the following table.

DEFLECTION AND CAMBER

LOCATION	INTERIOR BEAMS				EXTERIOR BEAMS			
	SPAN 1	SPAN 2	SPAN 3	SPAN 4	SPAN 1	SPAN 2	SPAN 3	SPAN 4
Deflection due to Dead Load	¼"	½"	½"	¼"	¼"	⅝"	⅝"	¼"

REPLACEMENT BARS: If reinforcing bars are fabricated from stock which has previously been tested and approved by the Ohio Highway Testing Laboratory, test samples as provided in Sec. S-4.02 need not be furnished and replacement bars will not be required.

BAR SIZE: is indicated in the bar mark. The first digit where three digits are used, and the first two digits where four are used, indicate the bar size number. For example, S501 is a No. 5 size bar, and S1101 is a No. 11 size bar.

PROCEDURE: The embankment shall be placed and compacted up to the finished spill thru slope and to the level of the subgrade for a distance of 200 feet back of the abutments, after which excavation shall be made for the abutment and the piles driven and piers constructed.

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS-1-54 "Reinforced Concrete Approach Slabs," revised 12-1-54, RB-1-55 "Rockers and Bolsters", revised 2-2-59 and AR-1-57 "Aluminum Railing with Concrete Parapet," revised 2-2-59 and to Supplemental Specification No. S207 "High Strength Steel Bolts" dated 4-28-55. and Supplemental Specification No. S101 dated 12-2-59.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57 together with current revisions thereof.

EXCAVATION AND BACKFILL: Excavation quantity includes the removal of fill material between the surface of proposed embankment and the bottom of footings. Backfill behind the abutments shall be compacted in accordance with the requirements for embankment compaction.

MACHINE FINISH: The concrete bridge deck shall be finished as specified in the "proposal note", Machine Finishing of Bridge Deck Slabs".

PILES shall be driven with a hammer of not less than 11,000 ft. lbs. energy per blow to firm contact with shale. If the length of penetration is approximately equal to the depth to shale according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in Sec. S-18.05 is not less than the following value for a pile hammer of the indicated energy rating:
50 tons per pile using an 11,000 ft. lb. hammer.
43 tons per pile using a 15,000 ft. lb. or greater hammer
If the energy rating of the hammer is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 34 tons per pile for the abutment piles.

ALIGNING RAILROAD TRACKS: After the Contractor has completed all excavation and backfill adjacent to the railroad tracks in compliance with Sec. E-2.04 and E-2.08 of the Construction and Material Specifications, subject to the supervision of the Railroad Company, nothing in Sec. E-2.04, E-2.08 or G-8.07 of the Specifications shall be construed to hold the Contractor liable for aligning and re-surfacing the railroad tracks.

FOUNDATION BEARING PRESSURE: Pier footings are designed for a maximum bearing pressure of 4.5 tons per sq. ft.

PIER FOOTINGS shall extend a minimum of 3" into solid shale or to the elevation shown, whichever is lower. Immediately after the pier excavation is completed, the area to be in contact with the footing concrete shall be given an application of bituminous material (1 gal. per square yard). This bituminous material to be one of the following emulsions or cutbacks as per item M-5 of the specifications: MC-4, MC-5, RC-4, RC-5, MS-2 or RS-2.

WELDING of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may at the option of the Contractor, be made in the shop. Class "B" welds are shown thus: B

RAILROAD AERIAL LINES shall be relocated by the railroad. The Contractor shall use all precautions necessary to see that the lines are not disturbed during the construction stage and shall cooperate with the railroad in the relocation of these lines. The cost of the relocation shall be included in the railroad force account work.

PAINTING. After erection and after the shop coat has been cleaned and, where necessary, repainted in accordance with Sec. 8.04, an additional coat of the same paint as used in the shop shall be applied over the outside face and all sides of bottom flange of the outside steel girders.

PAINT ON TRACK SPANS: One additional field coat of paint, of the same kind as the shop coat, shall be applied to the structural steel in the track spans before the application of the aluminum paint, except to those surfaces which are to be in contact with concrete.

CONSTRUCTION CLEARANCE of 19' vertically above the top of the railroad rails and 8' horizontally from the center of the tracks shall be maintained at all times.

STEEL: See Proposal regarding A-373 Steel.

SHEETING AND BRACING: Before Construction is started, eight sets of prints showing details of the sheeting and bracing to be used for excavation adjacent to the railroad tracks shall be submitted to the Director for approval by the Department of Highways and by the Railroad Company.

RADIOGRAPHIC EXAMINATION OF WELDS

THIS WORK SHALL CONSIST OF THE PERFORMANCE AND INTERPRETATION OF A RADIOGRAPHIC EXAMINATION OF BUTT WELDS AS REQUIRED BY THESE SPECIFICATIONS. IT SHALL INCLUDE THE PREPARATION AND POSITIONING OF WELDS FOR EXAMINATION, THE RADIOGRAPHING OF WELDS, THE PROCESSING AND EXAMINATION OF RADIOGRAPHS, THE INTERPRETATION OF RADIOGRAPHS FOR COMPLIANCE WITH THESE SPECIFICATIONS, AND THE PERFORMANCE AND INTERPRETATION OF ANY RETAKES OF RADIOGRAPHS REQUIRED FOR WELDS MADE TO REPLACE UNSATISFACTORY WELDS.

APPROVAL OF DIRECTOR

THE CONTRACTOR SHALL FURNISH EVIDENCE, ACCEPTABLE TO THE DIRECTOR, OF THE ADEQUACY OF THE EQUIPMENT TO BE USED AND THE COMPETENCE OF THE PERSONNEL.

THE INTERPRETATION OF RADIOGRAPHS AND THE CORRECTION OF DEFECTIVE WELDS SHALL BE SUBJECT TO THE APPROVAL OF THE DIRECTOR.

SCOPE OF EXAMINATION

BY MEANS OF RADIOGRAPHIC EXAMINATION, THE CONTRACTOR SHALL FURNISH EVIDENCE OF THE ACCEPTABLE QUALITY OF THE BUTT WELDS OF ALL GIRDERS. THE PARTS OF THESE MEMBERS TO BE RADIOGRAPHED ARE AS FOLLOWS:

1. THE COMPLETE BUTT WELDS IN THE FLANGES OF EACH GIRDER EXCEPT THE BOTTOM FLANGE OVER THE BEARING DEVICES.
2. ONE FOOT AT EACH END OF EACH OF THE WEB SPLICE WELDS.

THE SHOP EXAMINATION OF THE BUTT WELDS OF THE FLANGE PLATES AND OF THE WEB PLATES SHALL BE DETERMINED TO BE ACCEPTABLE BEFORE THESE FLANGE AND WEB PLATES ARE ASSEMBLED AND WELDED TO FORM THE GIRDERS. THE EXAMINATION OF FIELD WELDS SHALL BE MADE AS SOON AS PRACTICABLE AFTER WELDING AT EACH FIELD SPLICE IS COMPLETED.

WELD CONDITION

ALL WELDED JOINTS WHICH ARE TO BE RADIOGRAPHED SHALL BE FREE OF PAINT, SCALE AND GREASE, AND SHALL BE GROUND FREE OF ALL WELD RIPPLES AND SURFACE IRREGULARITIES ON BOTH SIDES. THE DIRECTION OF GRINDING SHALL BE PERPENDICULAR TO THE LENGTH OF THE WELD. THE WELDS SHALL BE GROUND TO SUCH A DEGREE THAT THE RESULTING RADIOGRAPHIC CONTRAST, DUE TO REMAINING IRREGULARITIES, CANNOT MASK OR BE CONFUSED WITH THAT OF ANY OBJECTIONABLE DEFECT AND THAT THE WELD SURFACE WILL MERGE SMOOTHLY INTO THE PLATE SURFACE. UNLESS SPECIFIED TO BE GROUND FLUSH, THE FINISHED SURFACE OF THE REINFORCEMENT MAY HAVE A CROWN EQUAL TO ONE-EIGHTH THE THICKNESS OF THE METAL BUT NOT MORE THAN 1/8 INCH.

RADIOGRAPHIC TECHNIQUE

THE WELD SHALL BE RADIOGRAPHED WITH A TECHNIQUE WHICH WILL DETERMINE QUANTITATIVELY THE SIZE OF DEFECTS WITH THICKNESSES EQUAL TO OR GREATER THAN 2 PER CENT OF THE THICKNESS OF THE BASE METAL. IN THE CASE OF A WELD JOINING PLATES OF UNEQUAL THICKNESS, BOTH PLATES MUST BE RADIOGRAPHED AT 2 PER CENT SENSITIVITY TOGETHER OR SINGLY, WITH THE WELD JUNCTION EVIDENT IN BOTH VIEWS.

TO DETERMINE WHETHER THE RADIOGRAPHIC TECHNIQUE EMPLOYED IS DETECTING DEFECTS OF A THICKNESS EQUAL TO OR GREATER THAN 2 PER CENT OF THE THICKNESS OF THE BASE MATERIAL, THICKNESS GAGES OR PENETRAMETERS OF THE TYPE HEREINAFTER SPECIFIED SHALL BE PLACED ON THE SIDE OF THE WELDED PLATE NEAREST THE SOURCE OF RADIATION AT AN EXTREME EDGE OF THE RADIOGRAPHIC PLATE OR FILM.

THE MATERIAL OF THE PENETRAMETER SHALL BE SUBSTANTIALLY THE SAME AS THAT OF THE WELDED PLATE.

THE THICKNESS OF THE PENETRAMETER SHALL BE NOT MORE THAN 2 PER CENT OF THE THICKNESS OF THE PLATE EXCLUSIVE OF ANY WELD REINFORCEMENT. PENETRAMETERS DESIGNED FOR INCREMENTS OF 1/8" OF PLATE THICKNESS ARE ACCEPTABLE.

IN EACH PENETRAMETER THERE SHALL BE THREE HOLES WITH DIAMETERS EQUAL RESPECTIVELY TO TWO, THREE AND FOUR TIMES THE PENETRAMETER THICKNESS, BUT IN NO CASE SHALL LESS THAN 1/16" DIAMETER BE USED.

EACH PENETRAMETER SHALL CARRY AN IDENTIFYING NUMBER REPRESENTING IN TWO SIGNIFICANT FIGURES THE MINIMUM THICKNESS IN INCHES OF THE PLATE FOR WHICH IT MAY BE USED. PENETRAMETERS MAY BE ESTABLISHED FOR DIFFERENCES IN THICKNESS NOT TO EXCEED 1/8" SO THAT A SET OF PENETRAMETERS VARYING FOR INCREMENTS OF PLATE THICKNESS OF 1/8" WILL BE ADEQUATE TO SERVE PLATES HAVING THICKNESSES BETWEEN THESE 1/8" DIMENSIONS.

THE IMAGES OF IDENTIFYING NUMBERS AND THE HOLES OF EACH PENETRAMETER MUST APPEAR CLEARLY ON THE RADIOGRAPH TO ESTABLISH THE 2 PER CENT SENSITIVITY.

FOR PLATES UP TO AND INCLUDING 2-1/2" IN THICKNESS, EACH PENETRAMETER SHALL BE 1-1/2" LONG AND 1/2" WIDE. FOR PLATES THICKER THAN 2-1/2" EACH PENETRAMETER SHALL BE 2-1/4" LONG AND 1" WIDE.

THE FILM DURING EXPOSURE SHALL BE AS CLOSE TO THE WELD AS PRACTICABLE. IF POSSIBLE, THIS DISTANCE SHALL BE NOT GREATER THAN 1 INCH. IN ANY EVENT, THE RATIO

$$\frac{\text{DISTANCE FROM SOURCE OF RADIATION TO WELD SURFACE TOWARD RADIATION}}{\text{DISTANCE FROM WELD SURFACE TOWARD RADIATION TO FILM}}$$

SHALL BE AT LEAST 7 TO 1.

ALL RADIOGRAPHS SHALL BE FREE FROM EXCESSIVE MECHANICAL PROCESSING DEFECTS WHICH WOULD INTERFERE WITH PROPER INTERPRETATION OF THE RADIOGRAPH.

IDENTIFICATION MARKERS, THE IMAGES OF WHICH WILL APPEAR ON THE FILM, SHALL BE PLACED ADJACENT TO THE WELD AND THEIR LOCATIONS SHALL BE ACCURATELY AND PERMANENTLY MARKED ON THE OUTSIDE SURFACE NEAR THE WELD SO THAT A DEFECT APPEARING ON THE RADIOGRAPH MAY BE ACCURATELY LOCATED.

THE SIZE OF FILM TO BE USED SHALL BE AT LEAST 4" WIDE X 15" LONG UNLESS PERMISSION TO USE A DIFFERENT SIZE IS OBTAINED IN WRITING FROM THE DIRECTOR.

STANDARDS OF ACCEPTABILITY

THE ACCEPTABILITY OF THE WELDS EXAMINED BY RADIOGRAPHY SHALL BE JUDGED BY THE FOLLOWING STANDARDS:

(1) CRACKS:
DEFINITION - A DISCONTINUITY RESULTING FROM A VERY NARROW SEPARATION OF METAL.
STANDARD - NO WELD CONTAINING CRACKS REGARDLESS OF LENGTH, SIZE OR LOCATION SHALL BE CONSIDERED ACCEPTABLE.

(2) GAS POROSITY:
DEFINITION - GAS POCKETS OR VOIDS IN METAL.
STANDARD - THE MAXIMUM DIMENSION OF ANY INDIVIDUAL GAS POCKET SHALL NOT EXCEED 1/8 INCH. THE MAXIMUM ACCUMULATION OF GAS POCKETS SHALL NOT EXCEED THAT SHOWN IN THE "POROSITY STANDARDS" OF THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS.

(3) SLAG INCLUSIONS:
DEFINITION - NON-METALLIC, SOLID MATERIAL ENTRAPPED IN WELD METAL OR BETWEEN WELD METAL AND BASE METAL.
STANDARD - A. ELONGATED SLAG INCLUSIONS: NO ELONGATED SLAG INCLUSION SHALL EXCEED TWO-THIRDS OF THE THICKNESS OF THE THINNER PLATE OF THE JOINT IN LENGTH AND 1/16" IN WIDTH, EXCEPT THAT REGARDLESS OF THE PLATE THICKNESS NO SUCH INCLUSION SHALL BE LONGER THAN 3/4" AND EXCEPT THAT NO SUCH INCLUSION WHICH IS SHORTER THAN 1/4" SHALL BE CAUSE FOR REJECTION.

B. ISOLATED SLAG INCLUSIONS: IN ANY 12 INCH LENGTH OF WELD, THE MAXIMUM WIDTH OF ANY ISOLATED SLAG INCLUSION SHALL NOT EXCEED 1/8 INCH, THE SUMMATION OF LENGTHS OF ISOLATED SLAG INCLUSIONS SHALL NOT EXCEED 1 INCH, AND THERE SHALL BE NO MORE THAN FOUR ISOLATED SLAG INCLUSIONS OF THE MAXIMUM WIDTH OF 1/8 INCH. ANY TWO SUCH INCLUSIONS SHALL BE SEPARATED BY AT LEAST 2 INCHES OF SOUND WELD METAL.

(4) INCOMPLETE FUSION:
DEFINITION - FAILURE OF THE WELD METAL TO FUSE COMPLETELY WITH THE BASE METAL OR PRECEDING BEADS.
STANDARD - NO INDIVIDUAL LACK OF FUSION SHALL EXCEED 1/2 INCH IN LENGTH. IN ANY 12 INCH LENGTH OF WELD, THE SUMMATION OF LENGTHS OF LACK OF FUSION SHALL NOT EXCEED 3/4 INCH AND INDIVIDUAL DEFECTS SHALL BE SEPARATED BY AT LEAST 6 INCHES OF SOUND METAL.

(5) INCOMPLETE PENETRATION:
DEFINITION - ROOT PENETRATION WHICH IS LESS THAN COMPLETE OR FAILURE OF A ROOT PASS AND A BACKING PASS TO FUSE WITH EACH OTHER.
STANDARD - NO INDIVIDUAL LACK OF PENETRATION SHALL EXCEED 1/2 INCH IN LENGTH. IN ANY 12 INCH LENGTH OF WELD, THE SUMMATION OF LENGTHS OF LACK OF PENETRATION SHALL NOT EXCEED 3/4 INCH AND INDIVIDUAL DEFECTS SHALL BE SEPARATED BY AT LEAST 6 INCHES OF SOUND METAL.

REPAIR OF DEFECTIVE WELDS

DEFECTIVE WELDS SHALL BE REPAIRED BY CHIPPING OR MELTING OUT SUCH DEFECTS FROM ONE OR BOTH SIDES OF THE JOINT AS REQUIRED, REMOVING ONLY SUFFICIENT WELD METAL TO CORRECT THE DEFECT. THE JOINT SHALL THEN BE REWELDED AND AGAIN RADIOGRAPHED.

ADDITIONAL RADIOGRAPHS

WHEREVER AN UNACCEPTABLE WELD OCCURS, A RADIOGRAPH SHALL BE MADE OF THE ADJOINING 12-INCH LENGTHS OF WELD TO DETERMINE IF THE FLAWS EXTEND BEYOND THE LIMITS OF THE ORIGINAL RADIOGRAPH. IF UNACCEPTABLE FLAWS OCCUR IN THESE ADJOINING LENGTHS OF WELD, THESE DEFECTIVE WELDS SHALL BE REPAIRED AND THIS ENTIRE PROCEDURE REPEATED FOR THE NEXT ADJOINING 12-INCH LENGTH OF WELD.

CUSTODY OF RADIOGRAPHS

AS SOON AS THE RADIOGRAPHING OF THE WELDMENTS ON THE FULL LENGTH OF EACH FLANGE OR WEB PLATE BETWEEN FIELD SPLICES HAS BEEN COMPLETED, THE CONTRACTOR SHALL SEND TO THE STATE THE PROCESSED CONTACT FILM (THAT FILM CLOSEST TO THE SOURCE OF RADIATION) OF ALL ORIGINAL AND RETAKE RADIOGRAPHS. THESE RADIOGRAPHS SHALL BE ACCOMPANIED BY A CERTIFICATION FROM THE CONTRACTOR THAT THE RADIOGRAPHIC EXAMINATION WAS PERFORMED IN CONFORMANCE WITH THESE SPECIFICATIONS. THE RADIOGRAPHS SHALL BECOME THE PROPERTY OF THE STATE. EACH RADIOGRAPH SHALL BE CLEARLY IDENTIFIED TO SHOW THE LOCATION ON THE STRUCTURE AT WHICH IT WAS TAKEN. UNACCEPTABLE DEFECTS SHALL BE IDENTIFIED IN EACH RADIOGRAPH IN WHICH THEY OCCUR AND THE REPAIR OR REPLACEMENT OF EACH UNACCEPTABLE WELD DEFECT SHALL BE NOTED AND IDENTIFIED.

REPORT OF COST

AFTER THE COMPLETION OF THE RADIOGRAPHIC INSPECTION OF WELDS, THE CONTRACTOR SHALL FURNISH THE STATE A COMPLETE REPORT OF THE COST OF PERFORMING THIS WORK, SEPARATED INTO THE ITEMS MENTIONED IN THE FOLLOWING PARAGRAPH.

BASIS OF PAYMENT

PAYMENT FOR THIS WORK, INCLUDING ALL LABOR, EQUIPMENT, MATERIALS AND INCIDENTALS, SHALL BE INCLUDED IN THE UNIT PRICE BID FOR S-7, STRUCTURAL STEEL.

Omit Shop coat on all portions of end dam. Portions in contact with steel or with concrete shall not be painted. All other portions shall be cleaned and given the shop coat in the field as well as the two field coats.

⅝"x 2" bolts at not more than 2'-0" ℄ with nuts tack-welded to underside of lower angle. 1⅛" ϕ holes in upper angle. Center ⅝" bolts in 1⅛" holes. Apply flake graphite between washers and angle. Turn bolt tight and release one half turn. Remove bolts as soon as concrete has set, preferably within two hours after placing to avoid damage due to temperature expansion or contraction of super structure. Fill holes with bituminous material.

This contact surface shall not be painted and shall be lubricated with flake graphite prior to placing of backwall concrete.

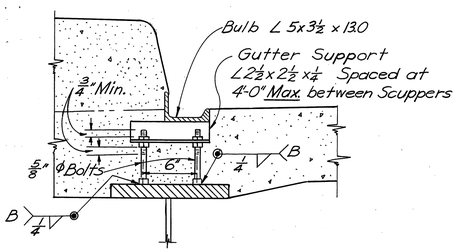
GUTTER & SCUPPER DETAILS



GUTTER SUPPORT

A welded butt joint in the end dam, along the centerline of roadway, will be required for that portion of the end dam attached to the superstructure. The portion attached to the backwall shall be placed in segments not less than 6'-0" in length, with one of the joints at the apex of the crown. These shall be closely butted but shall not be welded.

Gutters shall be accurately adjusted for alignment and grade with allowance for dead load deflection, before concrete is placed.

NOTES

SHOP DRAWINGS for the girders shall include an overall layout with dimensions showing the relative unloaded vertical position of each girder or girder segment with respect to the others in the same girder line and with respect to a full length base or work line taking into account deflection and the profile of the highway.

SHOP ASSEMBLY Reaming of holes for high strength bolts in field splices of girder segments shall be done with at least three adjacent segments assembled in their correct unloaded positions as shown on the shop drawing layout required in the note at left. Similar procedure shall be followed for any shop welding of web plate segments.

BAR SIZE is indicated in the bar mark. The first digit where three digits are used and the first two digits where four are used, indicate the bar size number. For example P601 is a No. 6 size bar and R1003 is a No. 10 size bar.

REPLACEMENT BARS: If reinforcing bars are fabricated from stock which has previously been tested and approved by the Ohio Highway Testing Laboratory, test samples as provided in Sec. S-4.02 need not be furnished and replacement bars will not be required.

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS-1-54, "Reinforced Concrete Approach Slabs", revised 12-1-54; AR-1-57, "Aluminum Railing with Concrete Parapet, revised 2-2-59; and Supplemental Specification S-101, dated 12-2-59.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57 together with current revisions thereof.

PILES shall be driven with a hammer of not less than 11,000 ft. lbs. per blow to firm contact with shale. If the length of penetration is approximately equal to the depth of firm shale according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in Sec. S-18.05 is not less than the following value for a pile hammer of the indicated energy rating.

For the abutment piles:

53 tons per pile using an 11,000 ft. lb. hammer.

45 tons per pile using a 15,000 ft. lb. or greater hammer.

If the energy rating is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 28 tons per pile for the abutment piles.

EXCAVATION AND BACKFILL: Excavation quantity includes the removal of fill material between the surface of proposed embankment and the bottom of footings. Backfill behind the abutments shall be compacted in accordance with the requirements for embankment compaction.

PROCEDURE: The embankment shall be placed and compacted up to the finished spill-thru slope and to the level of the subgrade for a distance of 200 feet back of the abutments, after which excavation shall be made for the abutment and the piles driven and the piers constructed.

MACHINE FINISH: The concrete bridge deck shall be finished as specified in the proposal note, "Machine Finishing of Bridge Deck Slabs".

FOUNDATION BEARING PRESSURE: Pier footings are designed for a maximum bearing pressure of 4.0 tons per sq. ft.

CAMBER of 1/800 of the span shall be provided in each span to allow for dead load deflection. This is the amount of camber required before falsework is released. To obtain this, proper allowance shall be made for the deflection of falsework members.

CURBS AND PARAPETS shall be placed after the shoring under the slab has been released sufficiently to permit the slab spans to attain full dead load deflection.

PIER FOOTINGS shall extend a minimum of 3" into solid shale or to the elevation shown, whichever is lower. Immediately after the pier excavation is completed, the area to be in contact with the footing concrete shall be given an application of bituminous material (¼ gallon per square yard). This bituminous material to be one of the following emulsions or cut-backs as per item M-5 of the specifications: MC-4, MC-5, RC-4, RC-5, MS-2 or RS-2.

BAR SIZE is indicated in the bar mark. The first digit where three digits are used and the first two digits where four are used indicate the bar size number. For example, a P501 is a No. 5 size bar, and a P1101 is a No. 11 size.

REPLACEMENT BARS: If reinforcing bars are fabricated from stock which has previously been tested and approved by the Ohio Highway Testing Laboratory, test samples as provided in Sec. S-402 need not be furnished and replacement bars will not be required.

SPIRAL REINFORCING BARS: The "Length" shown in the steel list for the spiral bars is the distance from the top of the footing to the bottom of the pier cap. The "No. of Turns" shown is the "Length" divided by the pitch, plus 3 turns (total number of closed coils), expressed as the nearest whole number. Spiral reinforcing bars shall not have deformations but shall in other respects conform to Item S-4. 1½ closed coils shall be provided at the ends of each spiral unit.
Four (or three) steel channel, tee or angle spacers, weighing approximately 0.68 lb. per lin. ft. of spacer, shall be provided for each spiral unit. They shall be equally spaced along the periphery of the coil. The number of pounds of these spacers, based on 0.68 lb. per lin. ft., will be paid for as reinforcing steel and is included in the tabulated quantity of spiral bars.

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS-1-54 "Reinforced Concrete Approach Slabs" revised 12-1-54, RB-1-55 "Rockers and Bolsters" revised 2-2-59, AR-1-57 "Aluminum Railing with Concrete Parapet," revised 2-2-59, CSB-2-56, "Continuous Steel Beam Bridge", revised 2-2-59 and Supplemental Specification S-101, dated 12-2-59.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57 together with current revisions there of.

PILES shall be driven with a hammer of not less than 11,000 ft-lbs. per blow to firm contact with shale. If the length of penetration is approximately equal to the depth to shale according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in Sec. S-18.05 is not less than the following value for a pile hammer of the indicated energy rating:
For the abutment piles:
50 tons per pile using an 11,000 ft-lb hammer.
45 tons per pile using a 15,000 ft-lb or greater hammer.
For the pier piles:
55 tons per pile using an 11,000 ft-lb. hammer
47 tons per pile using a 15,000 ft-lb or greater hammer.
If the energy rating of the hammer is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 30 tons per pile for the abutment piles and 25 tons per pile for the pier piles.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of the concrete shall progress upgrade. The slab may be placed in sections between transverse construction joints which are parallel to the transverse reinforcing steel and are located near the center of any span

WELDING of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the contractor, be made in the shop. Class "B" welds are shown thus: B

EXCAVATION AND BACKFILL: Excavation quantity includes the removal of fill material between the surface of the proposed embankment and the bottom of footings. Backfill behind the abutments shall be compacted in accordance with the requirements for embankment compaction.

STEEL: See Proposal regarding A-373 Steel.

MACHINE FINISH: The concrete bridge deck shall be finished as specified in the proposal note, "Machine Finishing of Bridge Deck Slabs".

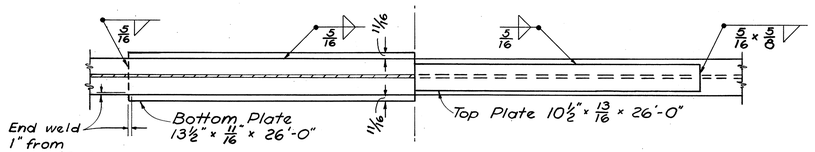
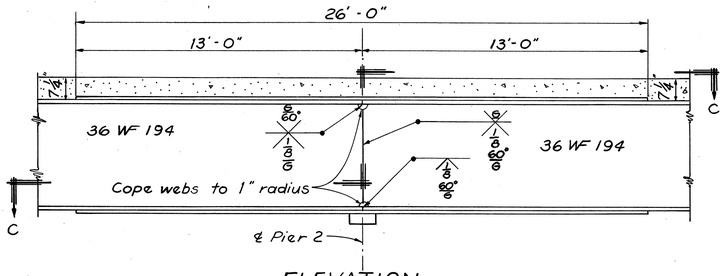
BEAM SPLICE DETAIL (Piers 1 & 3)



SECTION C-C



ELEVATION

BEAM SPLICE DETAIL (Pier 2)

BEAM SPLICE WELDING PROCEDURE

1. Raise end of beam at Pier 2, 2½".
2. Butt-weld beam flanges and web at Pier 1 using the following sequence: make two passes on each flange, then two on the web; repeat, using one pass at each location, until welds are completed.
3. Weld top and bottom flange moment plates at Pier 1.
4. Lower end of beam at Pier 2.
5. Make splice at Pier 2 and Pier 3 in the same manner raising the end of the beams 3½" at Pier 3 and ⅞" at the Forward Abutment.

PAINTING

After erection and after the shop coat has been cleaned and, where necessary, repainted in accordance with Sec. S 8.04, an additional coat of the same paint as used in the shop shall be applied over the outside face of the outside steel beams and all sides of the bottom flange.

CAMBERING of beams is required in accordance with the following table:

DEFLECTION AND CAMBER

Location	Interior Beams				Exterior Beams			
	Span 1	Span 2	Span 3	Span 4	Span 1	Span 2	Span 3	Span 4
Deflection due to Dead Load	¼"	5/16"	5/16"	¼"	¼"	5/16"	5/16"	¼"

EXISTING BRIDGE DATA

Downstream Bridge: At N.Y.C. R.R. 150' Downstream
Type: Concrete Slab added to arch.
Span: Single Span 24.9' clear.
Skew: None.
Length: 28.9'
Condition: Good.
Clear Opening: 370 sq. ft.
Upstream Bridge: At Bogart Rd., 1 mile Upstream.
Type: Steel Truss.
Span: 28.5±
Skew: None.
Roadway: 28' c/c of trusses.
Length: 31.1'
Waterway Opening: 250 sq. ft.

Foundation design and foundation quantities are based on hand rod soundings made at time of field survey. Adjustment of footing elevations may be required as directed by the Engineer at time of construction.

PROPOSED STRUCTURE

Type: Continuous Reinforced Concrete Slab. Reinforced Concrete Substructure. Abutments on pedestals. Solid wall piers.
Spans: 26'-0", 32'-6", 26'-0"
Roadway: 32'-0" f/f of Guard Rail and out to out of slab.
Load Frequency: CF 130 (57)
Skew: 15° Left Forward
Wearing Surface: ¾" Monolithic Concrete.
Approach Slabs: AS-1-54 (25'-0" Long)
Alignment: Tangent

DRAINAGE AREA = 22 Sq. Miles.

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS-1-54, "Reinforced Concrete Approach Slabs," revised 12-1-54, CS-1-54, "Continuous Slab Bridge," revised 7-16-56, and Supplemental Specification S-101, dated 12-2-59.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57 together with current revisions thereof.

PIER & ABUTMENT FOOTINGS: Pier footings shall extend a minimum of 1'0" into solid shale, and abutments 3" into solid shale or to the elevation shown whichever is lower. Immediately after the pier or abutment excavation is completed, the area to be in contact with the footing concrete shall be given an application of bituminous material (¼ gal. per square yard). This bituminous material to be one of the following emulsions or cut-backs as per Item M-5 of the specifications: MC-4, MC-5, RC-4, RC-5, MS-2 or RS-2.

ABUTMENT EXCAVATION QUANTITY includes the removal of till material between the bottom of the abutment crossbeam and elev. 590.9 at the rear abutment and elev. 590.6 at the forward abutment.

FOUNDATION BEARING PRESSURES: Pier footings are designed for a maximum bearing pressure of 3.4 tons per sq. ft. Abutment pedestal footings are designed for a maximum bearing pressure of 3.3 tons per sq. ft.

SLAB THICKNESS is 13¾" (14¾" at slab edge) which includes ¾" for monolithic wearing surface.

MACHINE FINISH: The concrete bridge deck shall be finished as specified in the proposal note, "Machine Finishing of Bridge Deck Slabs".

I-10	153	Sq.Yds.	Crushed aggregate slope protection						153

BAR SIZE is indicated in the bar mark. The first digit where three digits are used and the first two digits where four are used indicate the bar size number. For example, A 701 is a No. 7 size bar and A 1014 is a No. 10 size.

REPLACEMENT BARS: If reinforcing bars are fabricated from stock which has previously been tested and approved by the Ohio Highway Testing Laboratory, test samples as provided in Sec. S-4.02 need not be furnished and replacement bars will not be required.

SPIRAL REINFORCING BARS The "Length" shown in the steel list for the spiral bars is the distance from the top of the footing to the bottom of the abutment beam. The "No. of Turns" shown is the "Length" divided by the "Pitch," plus 3 turns (total number of closed coils), expressed as the nearest whole number. Spiral reinforcing bars shall not have deformations but shall in other respects conform to Item S-4. 1½ closed coils shall be provided at the ends of each spiral unit.

Four (or three) steel channel, tee or angle spacers weighing approximately 0.68 lb. per lin. ft. of spacer shall be provided for each spiral unit. They shall be equally spaced along the periphery of the coil. The number of these spacers, based on 0.68 lb. per lin. ft, will be paid for as reinforcing steel and is included in the tabulated quantity of spiral bars.

SECTION C-C

PROCEDURE: After the pedestals are placed, the earth fill shall be made to the height of the top of the abutment crossbeam and the excavation made for the crossbeam.

POROUS BACKFILL shall extend upward to the approach slab and to the surface of the earth shoulders, and outward to the surface of the embankment slopes. Excavation therefor, in excess of that required for construction of the abutment, shall be considered as paid for in the price per cu. yd. paid for porous backfill.

Description of Drive Sample - Core Boring
Sta 859+57 102' Lt.

(1) Top of Rock
(2) Limestone, gray, hard, dense, broken and jointed. No Loss.
(3) Sandstone, gray, hard, fine to medium grained, jointed. No Loss.
(4) Limestone, gray, hard, dense, slightly fossiliferous, with a shale interval in upper 0.25'. No Loss.
(5) Shale, gray, medium hard, somewhat siliceous with two 0.16' thick seams at elevations 574.2 and 573.3 respectively. No Loss.
(6) Limestone, gray, hard, dense, slightly fossiliferous. No Loss.

Corn — Residential — Corn — Clover — Corn
