GRADE SEPARATION WITH NORFOLK & WESTERN RAILWAY CO.

NOTE: All references to Federal Project No. F-FG-674(10) throughout this plan shall be disregarded.

LIMITED ACCESS

This improvement is especially designed for through traffic and has been declared a limited access highway or freeway on U.S.R. 35 by action of the Director of Highways in accordance with the provisions of Section 5511.02 of the revised Code of Ohio.

1963 SPECIFICATIONS

Plans Prepared by ELMER S. BARRETT ASSOCIATES
Elmer S. Barrett
249 S. Paint St. Chillicothe, Ohio

The standard specifications of the State of Ohio, Department of Highways, including changes and supplemental specifications listed in the proposal shall govern this improvement.

The right of way for this improvement will be provided by the State of Ohio.

I hereby approve these plans and declare that the making of this improvement will not require the closing to traffic of the highway, and that provisions for the maintenance and safety of traffic will be as set forth on these plans and estimates.

Approved W. Forest R. Rusch
Date 10-2-64 Division Deputy Director

Approved C. H. Altvater
Date 11-27-64 Engineer of Bridges

NOTES.

SPECIAL BERM & SLOPE PROTECTION:

Prior to placement of Sod in the Berm and Slope, galvanized poultry fence shall be placed on the finished grade in strands which shall be at right angles to the direction of flow. Each strand shall be staked securely on top and bottom with stakes spaced at four foot intervals and alternated in rows four feet apart.

STAKES shall be 1"x1"x8" wood stakes and shall be perpendicular to the ground and flush with the finished grade.

The FENCE shall be straight line Poultry Fence or equivalent with strand width of four feet, having a two inch Mesh and all wires No. 20 Gauge.

The strands of fencing shall be fastened together at twelve inch intervals by means of hog rings. The Fence shall be secured to the wood stakes by metal staples.

SOD shall be laid in accordance with Construction and Materials Specifications Section L-10.07. Payment for all the above is to be included in the Unit price bid for Item L-10 Sodding, for Special Berm and Slope Protection.

APPROVED Robert C. Lamer
ENGINEER OF TRAFFIC

ROSS COUNTY
ROS-35-21.23

GENERAL NOTES

FIELD OFFICE

THE CONTRACTOR SHALL PROVIDE A SUITABLE FIELD OFFICE FOR THE EXCLUSIVE USE OF THE STATE EMPLOYEES, IN ACCORDANCE WITH SECTION S-0.01, (b), HAVING A MINIMUM OF 500 SQ. FT. OF FLOOR SPACE. THE CONTRACTOR SHALL HAVE A TELEPHONE INSTALLED AND MAINTAINED IN THIS FIELD OFFICE DURING THE CONSTRUCTION OF THIS PROJECT. THE CONTRACTOR SHALL ALSO PROVIDE AND INSTALL WIRING AND OUTLETS SUITABLE FOR CONNECTING THE ELECTRICAL OFFICE EQUIPMENT. AND SHALL PROVIDE 110 VOLT ALTERNATING CURRENT TO THE OFFICE DURING THE ENTIRE PERIOD OF CONSTRUCTION OF THIS PROJECT.

DESIGN SPEED

THE GEOMETRICS FOR THIS PROJECT HAVE BEEN PLANNED FOR A DESIGN SPEED OF 70 MILES PER HOUR.

MAINTAINING TRAFFIC, ITEM I-3

AN ESTIMATED AMOUNT OF ITEM I-4 CALCIUM CHLORIDE HAS BEEN PROVIDED IN THE GENERAL SUMMARY FOR DUST CONTROL.

THE CONTRACTOR SHALL ARRANGE HIS OPERATIONS SO AS TO KEEP TRAFFIC INCONVENIENCE TO A MINIMUM.

TRAFFIC ON U.S.R. 35 SHALL REMAIN ON THE PRESENT ROUTE UNTIL THE COMPLETION OF THIS PROJECT.

TWO WAY TRAFFIC SHALL BE MAINTAINED ON EAST MAIN STREET AT ALL TIMES.

THIS NOTE SHALL NOT BE CONSTRUED TO WAIVE ANY PORTION OF THE CONSTRUCTION AND MATERIALS SPECIFICATIONS.

ITEM I-22 SUBBASE, GRADING "A" OR "B", AS PER PLAN

THE MATERIAL FURNISHED FOR THIS ITEM SHALL MEET THE REQUIREMENTS OF GRADING "A" OR "B" OF SEC. I-22.02 EXCEPT THAT, FOR EITHER GRADING, NO MORE THAN 10 PERCENT OF THE MATERIAL SHALL PASS A NO. 200 SIEVE AFTER ALL OPERATIONS OF PLACING AND COMPACTING HAVE BEEN COMPLETED.

T-71 PAVEMENT JOINTS

IN ADDITION TO JOINTS SPECIFICALLY CALLED FOR ON THE VARIOUS DETAIL SHEETS, STANDARD LONGITUDINAL JOINTS SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE TYPICAL SECTIONS, AND THE MAXIMUM DISTANCE BETWEEN CONTRACTION JOINTS SHALL IN ALL CASES BE IN ACCORDANCE WITH THE STANDARD DRAWING T.J.

EXPANSION JOINTS

ALTHOUGH SPECIFIC LOCATIONS OF CERTAIN EXPANSION JOINTS HAVE BEEN DETAILED ON THIS PLAN, NO WAIVER OF THE SPECIFICATIONS IS INTENDED AND EXPANSION JOINTS SHALL BE PROVIDED AT ALL MAJOR STRUCTURES AS REQUIRED BY STANDARD CONSTRUCTION DRAWING T-J.

ROUNDING OF CORNERS SHOWN ON CROSS SECTIONS

THE ROUNDED CORNERS SHOWN ON STANDARD DRAWING RI-1, AS MODIFIED BY THE TYPICAL SECTIONS, APPLY TO ALL CROSS SECTIONS, EVEN THOUGH OTHERWISE SHOWN ON THESE PLANS.

SPECIAL DITCHES

FOR SPECIAL DITCH GRADES, SEE CROSS SECTIONS.

CONNECTIONS TO EXISTING PIPE

At places where the plans provide for proposed drainage pipe to be connected to existing pipes, it shall be the responsibility of the Contractor to locate the existing pipe both as to line and grade before he starts to lay the proposed pipe.

The cost of this operation shall be included in the unit price bid for the pertinent pipe item.

UTILITIES

THE CONTRACTOR SHALL NOTIFY AT LEAST TWO WORKING DAYS BEFORE BREAKING GROUND ALL PUBLIC SERVICE CORPORATIONS HAVING WIRE, POLES, PIPE CONDUITS, MANHOLES OR OTHER STRUCTURES THAT MAY BE AFFECTED BY THIS OPERATION, INCLUDING ALL STRUCTURES WHICH ARE AFFECTED AND NOT SHOWN ON THESE PLANS. ANY AND ALL WORK REQUIRED FOR PUBLIC OR PRIVATE UTILITIES WILL BE DONE BY AND AT THE EXPENSE OF THEIR RESPECTIVE OWNERS, UNLESS OTHERWISE NOTED ON THESE PLANS.

UNDERGROUND UTILITIES

THE LOCATIONS OF THE UNDERGROUND UTILITIES SHOWN ON THE PLANS HAVE BEEN OBTAINED BY DILIGENT FIELD CHECKS AND SEARCHES OF AVAILABLE RECORDS. IT IS BELIEVED THAT THEY ARE ESSENTIALLY CORRECT, BUT THE STATE OF OHIO MAKES NO GUARANTEES AS TO THEIR ACCURACY OR COMPLETENESS.

CHANNEL CROSS SECTIONS

THE CROSS SECTIONS FOR CHANNEL EXCAVATION ALONG THE SCIOTO RIVER WILL BE RE-PERFORMED BY STATE FORCES PRIOR TO CONSTRUCTION. NEW CROSS SECTIONS WILL BE REQUIRED DUE TO RECENT EXCAVATIONS OR FLOOD ACTION IN THIS AREA.

CLEANING PRIVY VAULTS

PRIVY VAULTS SHALL BE CLEANED AND FILLED WITH SUITABLE MATERIAL AS DIRECTED BY THE ENGINEER. MATERIAL REMOVED FROM THESE VAULTS SHALL BE CLASSIFIED AS UNSUITABLE AND DISPOSED OF OUTSIDE THE LIMITS OF RIGHT-OF-WAY OR EASEMENT LINES. THE CLEANING OF PRIVY VAULTS SHALL BE PAID FOR UNDER ITEM SPECIAL, CLEANING OF PRIVY VAULTS.

THE BACKFILLING OF PRIVY VAULTS SHALL BE PAID FOR UNDER ITEM E-1, EMBANKMENT. THE PRICE BID FOR THIS ITEM SHALL CONSTITUTE FULL COMPENSATION FOR PERFORMING ALL THE REQUIREMENTS OF THE ITEM AND FOR ALL LABOR, EQUIPMENT, TOOLS AND INCIDENTALS NECESSARY TO COMPLETE THIS ITEM.

AN ESTIMATED AMOUNT OF EMBANKMENT FOR BACKFILLING PRIVY VAULTS HAS BEEN CARRIED TO CROSS SECTIONS.

ITEM SPECIAL - CLEANING AND DISPOSAL OF SEPTIC TANKS

THIS ITEM SHALL INCLUDE CLEANING, BACKFILLING AND REMOVAL OF ALL OR ANY PORTION OF EXISTING SEPTIC TANKS.

ALL SEPTIC TANKS LYING WITHIN THE PROPOSED RIGHT-OF-WAY LIMITS SHALL BE CLEANED AND EMPTIED. MATERIAL REMOVED FROM THESE TANKS SHALL BE CLASSIFIED AS UNSUITABLE AND DISPOSED OF OUTSIDE THE RIGHT-OF-WAY OR EASEMENT LINES.

WHEN THE SEPTIC TANKS ARE LOCATED ABOVE THE FINISHED PAVEMENT OR GROUND LINES, THEY SHALL BE ENTIRELY REMOVED AND DISPOSED OF IN ACCORDANCE WITH SEC. S-24.03.

WHEN THE TANKS ARE LOCATED BELOW THE FINISHED PAVEMENT OR GROUND LINES, THE TOPS OF THE TANKS SHALL BE REMOVED, AND THE WALLS SHALL BE REMOVED TO A DEPTH OF 3 FEET BELOW THE FINISHED SUBGRADE OR GROUND LINES. THE REMOVED MATERIAL SHALL BE DISPOSED OF AS EXPLAINED ABOVE. THE TANKS SHALL BE BACKFILLED WITH SUITABLE SOIL OR GRANULAR MATERIAL IN ACCORDANCE WITH SEC. E-1.08.

THIS ITEM SHALL BE PAID FOR AT THE UNIT PRICE BID PER EACH FOR "ITEM SPECIAL - CLEANING AND DISPOSAL OF SEPTIC TANKS, WHICH PRICE AND PAYMENT SHALL CONSTITUTE FULL COMPENSATION FOR CLEANING, REMOVING AND DISPOSING OF UNSUITABLE MATERIALS, BACKFILLING AND FOR ALL LABOR, TOOLS, EQUIPMENT AND INCIDENTALS NECESSARY TO COMPLETE THIS ITEM INCLUDING INCIDENTAL EXCAVATION.

SPECIAL COMPACTION – STA. 1122+70 TO STA. 1126+40

The Embankment Soil Compaction between Sta. 1122+70 and Sta. 1126+40 shall meet the requirements of Table 1 of Section E-1.08 increased by a minimum of four per cent [4%].

The Cost of Performing this operation shall be included in the unit price bid for Item E-1 Embankment.

Work shall not be started on constructing the abutments for Bridge No. ROS-35-2129 L&R until the embankment between the above stations has been in place for at least 90 days. Work on piers may begin when the above embankment is in place.

EROSION CONTROL AT BRIDGES

SODDED CHANNELS SHALL BE PROVIDED AT ENDS OF BRIDGES WHERE REQUIRED BY THE PLANS. COST OF ALL WORK NECESSARY TO COMPLETE THE ITEM SHALL BE INCLUDED IN THE UNIT PRICE BID PER SQUARE YARD FOR ITEM L-10, SODDING FOR SPECIAL BERM AND SLOPE PROTECTION.

EROSION CONTROL AT CULVERTS

EROSION CONTROL AT PIPE CULVERTS SUCH AS PAVED GUTTER AND DUMPED ROCK CHANNEL PROTECTION, WHEN PROVIDED FOR BY THE PLAN, SHALL BE PLACED IMMEDIATELY AFTER INSTALLATION OF THE PIPE CULVERT.

PROPOSED LEVEE (RIGHT OF CHANNEL EXCAVATION STATION 19+07 TO STATION 30+12.27)

THIS PROPOSED LEVEE IS BEING CONSTRUCTED TO REPLACE THE EXISTING LEVEE THAT WILL BE REMOVED BY THE SCIOTO RIVER CHANNEL EXCAVATION.

THE CONTRACTOR SHALL RECEIVE APPROVAL FROM THE PROJECT ENGINEER BEFORE EXCAVATING THE EXISTING LEVEE.

THE SUITABLE MATERIAL REMOVED FROM THE EXISTING LEVEE SHALL BE USED AS EMBANKMENT FOR THE PROPOSED LEVEE.

MATERIAL OBTAINED FROM ITEM E-3 ..... MAY BE USED FOR EMBANKMENT, PROVIDING ADDITIONAL MATERIAL IS REQUIRED. THE PROPOSED LEVEE SHALL BE COMPACTED AS DESCRIBED IN ITEM E-1 SECTION E-1.08.

DRAINAGE OF BASE MATERIAL

WHERE THE BASE MATERIAL IS DRAINED BY ..... EXTENSIONS OF THE SUBBASE THROUGH THE SHOULDERS TO THE FILL SLOPE OR THE DITCH LINE, THE CONTRACTOR SHALL FINISH, SEED, AND MULCH THE SLOPES SO AS NOT TO IMPEDE DRAINAGE OF THE BASE MATERIAL.

PROTECTION OF TRAFFIC

THE CONTRACTOR SHALL SAFEGUARD THE TRAVELING PUBLIC ON EAST MAIN STREET AND ON THE N & W RAILROAD BY PROVIDING PLATFORMS, NETS, OR OTHER SUITABLE PROTECTION ABOVE THE TRAVELED LANES. PAYMENT FOR THIS PROTECTION SHALL BE INCLUDED IN THE LUMP SUM PRICE BID FOR ITEM I-3, MAINTAINING TRAFFIC.

GRANULAR EMBANKMENT

THE UPPER PORTION OF THE EMBANKMENT SHALL BE GRANULAR MATERIAL FROM THE CHANNEL EXCAVATION & ROADWAY EXCAVATION ..... AND SHALL BE PLACED AS SHOWN ON THE TYPICAL SECTIONS AND CROSS SECTIONS.

MATERIAL FURNISHED FOR THIS ITEM SHALL BE AS DEFINED IN SEC. E-1.02 EXCEPT THAT AT LEAST 75 PERCENT BY WEIGHT OF THE GRAINS OR PARTICLES SHALL BE RETAINED ON A NO. 200 SIEVE

THE COST OF SELECTING, CLASSIFYING, TESTING, STOCKPILING, IF NECESSARY, AND PLACING THIS MATERIAL SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ITEM E-1 EMBANKMENT.

COMPACTION OF THIS MATERIAL SHALL BE IN ACCORDANCE WITH ITEM E-1.

GRANULAR EMBANKMENT FOR GRAVEL PIT AREAS

GRANULAR MATERIAL SHALL ALSO BE PLACED IN THE GRAVEL PIT AREAS AS SHOWN ON THE CROSS SECTIONS. THIS MATERIAL MAY BE PLACED BY THE METHOD OF END DUMPING IF SURFACE WATER IS PRESENT AT THE TIME OF CONSTRUCTION. END DUMPING METHODS MAY BE USED UP TO AN ELEVATION TWO FEET ABOVE THE WATER LEVEL. ABOVE THIS ELEVATION, EMBANKMENT CONSTRUCTION SHALL BE IN ACCORDANCE WITH SEC. E-1.08.

WHERE END DUMPING IS PERMITTED, NORMAL CLEARING AND GRUBBING SHALL BE PERFORMED BUT THE REQUIREMENTS OF SEC. E-1.04 FOR SCALPING AND COMPACTION OF THE FOUNDATION SHALL BE WAIVED.

MATERIAL FURNISHED FOR THIS ITEM SHALL BE AS DEFINED IN SEC. E-1.02 EXCEPT THAT AT LEAST 75 PERCENT BY WEIGHT OF THE GRAINS OR PARTICLES SHALL BE RETAINED ON A NO. 200 SIEVE

THE COST OF SELECTING, CLASSIFYING, TESTING, STOCKPILING, IF NECESSARY, AND PLACING THIS MATERIAL SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ITEM E-1 EMBANKMENT.

COMPACTION OF THIS MATERIAL SHALL BE IN ACCORDANCE WITH ITEM E-1.

~~EARTHWORK~~ –

~~Suitable Material from E-3 Channel Excavation shall be used for Embankment on this Project~~

GENERAL NOTES

FIELD DRAINS

ALL FARM TILES WHICH ARE ENCOUNTERED DURING CONSTRUCTION SHALL BE PROVIDED WITH UNOBSTRUCTED OUTLETS UNDER THE DIRECTION OF THE ENGINEER. EXISTING COLLECTORS WHICH ARE LOCATED BELOW THE ROADWAY DITCH ELEVATIONS AND WHICH CROSS THE ROADWAY SHALL BE REPLACED WITHIN THE RIGHT-OF-WAY LIMITS BY ITEM I-1 PIPE CLASS B-1. EXISTING COLLECTORS AND ISOLATED FARM TILES WHICH ARE ENCOUNTERED ABOVE THE ELEVATION OF THE ROADWAY DITCHES SHALL BE OUTLETTED INTO THE ROADWAY DITCH. THE OPTIMUM OUTLET ELEVATION SHALL BE, IF POSSIBLE, ONE FOOT ABOVE THE FLOWLINE ELEVATION OF THE DITCH. LATERAL FIELD TILES WHICH CROSS THE ROADWAY SHALL BE INTERCEPTED BY ITEM I-1 PIPE CLASS H-2 AND CARRIED IN A LONGITUDINAL DIRECTION TO AN ADEQUATE OUTLET OR ROADWAY CROSSING.

THE LOCATION, TYPE, SIZE AND GRADE OF REQUIRED REPLACEMENTS SHALL BE DETERMINED BY THE ENGINEER DURING CONSTRUCTION AND PAYMENT SHALL BE MADE ON FINAL MEASUREMENTS.

THE FOLLOWING QUANTITIES HAVE BEEN INCLUDED IN THE GENERAL SUMMARY FOR THE WORK NOTED ABOVE:

I-1	8" PIPE CLASS B-1	100 LIN. FT.
I-1	8" PIPE CLASS H-2	100 LIN. FT.
I-1	8" PIPE CLASS F-4	40 LIN. FT.
I-5	8" PIPE SPECIALS CLASS B-1	5 EACH

SEALING OF PIPE JOINTS

WHERE CONNECTIONS ARE MADE BETWEEN RIGID AND FLEXIBLE PIPE SECTIONS OR BETWEEN PIPE SECTIONS OF DIFFERENT KIND OR TYPE OF END FABRICATION, WHETHER REQUIRED BY THE PLANS, ARISING FROM PERMISSIBLE USE OF OPTIONAL MATERIALS, OR ENCOUNTERED IN CONNECTION TO EXISTING FACILITIES, THE JOINT SHALL BE SEALED, IF SEALING IS REQUIRED BY THE SPECIFICATIONS, AS PER STANDARD DRAWING I-1. PAYMENT FOR SEALING AS DESCRIBED ABOVE SHALL BE INCLUDED IN THE UNIT PRICE BID FOR THE PERTINENT PIPE ITEM.

REMOVAL OF EXISTING PIPE

THE REMOVAL OF ALL EXISTING PIPE DRAINS WITHIN THE LIMITS OF PROPOSED EXCAVATION ITEMS SHALL BE INCLUDED FOR PAYMENT IN THE UNIT PRICES BID FOR THE RESPECTIVE EXCAVATION ITEM, UNLESS OTHERWISE ITEMIZED IN THE PLANS.

REMOVALS

ALL ITEMS MARKED FOR REMOVAL SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY HIM, UNLESS OTHERWISE SPECIFIED ON THESE PLANS.

PIPE CULVERT

WHEN BELL AND SPIGOT PIPE IS USED, ANY NECESSARY PIPE CUT-OFFS WILL BE MADE AT THE SPIGOT END OF THE LENGTH OF PIPE ADJACENT TO THE END LENGTH. WHEN TONGUE AND GROOVE PIPE IS USED, THE LENGTH OF PIPE NEXT TO THE END LENGTH SHALL BE CUT AND BUTT JOINT FORMED WITH A COLLAR AS SHOWN. THE COST OF THE JOINT AND COLLAR SHALL BE INCLUDED IN THE CONTRACT UNIT PRICE BID FOR THE PERTINENT PIPE ITEM.

PLUGGING PIPE

THE UPSTREAM ENDS OF ALL PIPE OR TILE LINES INTERCEPTED BY EARTHWORK OPERATIONS AND, WHERE INDICATED, THE ENDS OF PIPE LINES TO BE ABANDONED IN PLACE SHALL BE EFFECTIVELY BLOCKED AND COVERED. BROKEN PIECES AND PORTIONS OF PIPE OR TILE SHALL BE REMOVED UNTIL A WHOLE LENGTH IS ENCOUNTERED WHICH SHALL BE BLOCKED WITH CONCRETE, FLAT STONE OR BRICK LAID IN MORTAR, OR A PRECAST CLAY OR CONCRETE STOPPER. PAYMENT FOR THE ABOVE WORK SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ITEM E-1, ROADWAY EXCAVATION

CONTRACTOR'S MAINTENANCE RESPONSIBILITY

ON THIS PROJECT, THE CONTRACTOR'S RESPONSIBILITY FOR MAINTENANCE OF THE EXISTING PAVEMENT PER ITEM I-3 SHALL BE LIMITED TO THOSE PORTIONS OF THE EXISTING PAVEMENT LYING WITHIN THE PROPOSED WORK LIMITS.

SEEDING AND PROTECTING

Quantities for Seeding, ITEM L-9, are calculated for the soil areas between lines ten (10) feet outside the work limits as shown on the cross sections or to the right of way line if such line is less than ten (10) feet from the work limits, and for all areas surrounded by ramps or proposed pavement

Recently cultivated areas or areas with no vegetation located within the right of way but beyond the limits prescribed for Item L-9, Seeding and Protecting shall, at the direction of the Engineer, be seeded in accordance with Item L-9, Seeding and Protecting.

Estimated Quantities- To Sheet 19

F-G- 674(10) 2025 Sq. Yds.

F- 674(10) 3247 Sq. Yds.

REMOVAL OF TREES

ALL TREES AND STUMPS LYING WITHIN THE CONSTRUCTION LIMITS OF THIS PROJECT (INCLUDING CHANNEL) SHALL BE REMOVED UNDER THE LUMP SUM PRICE BID FOR ITEM E-9, REMOVAL OF TREES AND STUMPS, EXCEPT THAT THOSE TREES FOR WHICH PROTECTION AND PRESERVATION WORK IS INDICATED ELSEWHERE IN THESE PLANS SHALL NOT BE REMOVED.

THE FOLLOWING IS AN APPROXIMATE ESTIMATE OF THE NUMBER OF TREES TO BE REMOVED:

SIZES	NO. TREES
12"-18"	1790
18"-24"	524
24"-30"	206
30"-36"	164
36"-42"	34
42"-48"	13
OVER 48"	32
	2763

THE ABOVE ESTIMATE IS APPROXIMATE AND THE STATE OF OHIO RESERVES THE RIGHT TO ORDER THE REMOVAL OF ADDITIONAL TREES OR STUMPS OUTSIDE OF THE LIMITS OF CONSTRUCTION BUT WITHIN THE RIGHT-OF-WAY AND/OR EASEMENT LINES. PAYMENT FOR THE REMOVAL OF THESE ADDITIONAL TREES OR STUMPS SHALL BE INCLUDED IN THE LUMP SUM PRICE BID FOR ITEM E-9, REMOVAL OF TREES AND STUMPS.

REPLACEMENT

THE CONTRACTOR SHALL REPLACE, AT HIS OWN EXPENSE, ANY ITEM NOT SPECIFICALLY LISTED FOR REMOVAL THAT IS DAMAGED OR DESTROYED BY HIS OPERATIONS.

R/W MONUMENTS, FEDERAL PROJECT MARKERS AND SECTION MARKERS

EXISTING R/W MONUMENTS, BENCH MARKS, FEDERAL PROJECT MARKERS AND SECTION MARKERS THAT WILL BE REMOVED BY CONSTRUCTION, SHALL BE PROTECTED BY THE CONTRACTOR AS PER SECTION G-7.09 UNTIL THEY CAN BE WITNESSED, REFERENCED, AND RESET BY THE CONSTRUCTION CREW.

ITEM 5.5, CE-101.04 Compaction Using Heavy Pneumatic Tired Roller

An estimated quantity for this item has been provided in the General Summary for use in proof rolling of subgrade on the mainline and ramp pavements as directed by the engineer. In lieu of the requirements of CE-101.04, a minimum of one coverage will be required to check the subgrade. Moisture content of the top 12" of subgrade shall not exceed optimum at the time of proof rolling. Tire pressure and total load shall be varied as directed by the engineer within the limits provided in Supplemental Specification No. CE-101.04.

APPROACH SLAB LONGITUDINAL JOINTS

Longitudinal impressed or sawed joints shall be provided between lane elements, on all approach slabs, in accordance with Standard Construction Drawing L.J. No. 1. Payment

CONSTRUCTION LAYOUT STAKES

See note in proposal describing the work included in this Lump sum pay item.

AGRICULTURAL LIMING MATERIAL

The location and need for agricultural liming material will be determined by laboratory tests after the rough grading operations have been performed. Quantities of agricultural liming as shown on the plans are sufficient for the entire project, but will be non-performed for the areas where tests show that the liming material is not needed

Where used this material shall be applied at the rate of 100 lbs. per 1000 square feet

REINFORCED PIPE ENDS

Reinforced ends will be required on all corrugated metal pipe Class F-4 (except helical) if the exposed ends are unprotected by headwalls, catch basins, or manholes.

Payment for reinforced ends shall be included in the unit price bid for the pertinent pipe item

GUARD RAIL FLARES

Where proposed guard rail flares are constructed of rail elements which have not been fabricated exactly to fit the curvature shown on the plans, the two end posts of each flared section shall be encased in a minimum 4 inch thickness of Class "E" concrete for the full depth of the post below the ground line.

Payment for encasement, if required, shall be included in the unit price bid for the guard rail.

GUARD RAIL ADJACENT TO BRIDGE

One (1) additional guard rail post shall be provided in the center of each panel of guard rail adjacent to the bridge, payment for which shall be included in the unit price bid for Item I-15 Guard Rail

COOPERATION & SCHEDULE OF OPERATIONS

The Contractor is hereby notified that the improvement immediately west of this project designated as ROS-35-19.93 will be performed concurrently with this contract.

The Contractor for this project shall be responsible for informing himself of all available facets of overlapping work and for coordinating and scheduling his operations, under the direction of the Engineer, in a manner that will result in a minimum of interference and inconvenience to the other Contractor. He shall permit necessary access to the other Contractor for overlapping work.

[illegible] shall be given to the scheduling of operations [illegible] before work on the project begins.

Any additional costs incurred in complying with the above requirements shall be included in the pertinent bid items for this project and no additional compensation will be allowed.

LONGITUDINAL JOINTS

To provide for future lane construction Standard Longitudinal Key Joints shall be provided, with the female end of the standard hook bolt cast into the T-71 pavement as called for on Standard Drawing L.J. No. 1 and at the locations listed below, or as directed by the Engineer.

After the forms have been removed the 5/8" top bolt shall be reinserted into the hook bolt to protect the threads and left in place in lieu of the male end of the hook bolt.

The exposed metal shall then be painted with two coats of bituminous material meeting the requirements of Sec. M-5.2 or Sec. M-5.5.

Approximate locations:

Proposed Eastbound Lanes - East side - from Sta. 1143+65± to 1158+19.77 = 1,454.77 L.F.
East side - from Sta. 1171+80.23 to 1198+76.26 = 2,696.03 L.F.
East side - from Sta. 1201+04.76 to 1205+00.00 = 395.24 L.F.

Proposed Westbound Lanes - East side - from Sta. 1145+95± to 1158+19.77 = 1,224.77 L.F.
West side - from Sta. 1171+80.23 to 1198+76.26 = 2,696.03 L.F.
West side - from Sta. 1201+04.76 to 1205+00.00 = 395.24 L.F.
Total Estimated Length ———— 8,862.08 L.F.

Payment for Longitudinal Joints shall be included in the unit price bid for Item T-71, Reinforced Portland Cement Concrete Pavement.

FUTURE PROPOSED LIGHTING SYSTEM. THE UNDERGROUND ELECTRIC DUCT AS INDICATED IS A PART OF THESE PLANS. ALL OTHER IMPLEMENT PARTS OF THE FUTURE PROPOSED LIGHTING SYSTEM ARE NOT INCLUDED AS A PART OF THESE PLANS.

UNDERGROUND ELECTRICAL DUCT. DUCTS SHALL BE ENCASED BY CLASS "C" CONCRETE HAVING A MINIMUM THICKNESS OF THREE INCHES, SHALL HAVE AT LEAST 24 INCHES COVER BELOW SUBGRADE AND SHALL BE PITCHED TO DRAIN. ENDS OF DUCTS SHALL EXTEND TWO FEET BEYOND END OF SHOULDER PAVEMENT OR BACK OF CURB. ONE NO. 10 AWG GALVANIZED STEEL DRAG WIRE SHALL BE LEFT IN EACH DUCT AND ENDS OF DUCTS SHALL BE CLOSED WITH CAPPED BUSHINGS.

EXCAVATION AND BACKFILL. EXCAVATION AND BACKFILL SHALL CONFORM WITH THE APPLICABLE PROVISIONS OF ITEM E-2.

DUCT MARKERS. CONCRETE MARKERS, MANUFACTURED IN ACCORDANCE WITH DETAILS SHOWN ON THE PLAN SHALL BE PLACED OVER EACH END OF EACH UNDERGROUND DUCT. MARKERS SHALL BE INSTALLED FLAT ON THE GROUND, PROJECTING ONE INCH ABOVE FINISHED GRADE. COST OF FURNISHING AND INSTALLING MARKERS SHALL BE INCLUDED IN THE UNIT PRICE BID FOR ITEM S-25 3" CONDUITS,
SEE DETAIL ON SHEET NO. 10.

FUTURE PROPOSED INTERCHANGE LIGHTING LEGEND

- ☆ Light Standard
- Underground Electric Cable No. 6 AWG except as otherwise noted. Slant lines indicate number of conductors.
- Proposed Underground Electric Duct, No. and Size of duct shown. To be included as part of this Contract – 1185+72 and Ramp C 12+85
- Service Pole and Control Equipment

NOTE: Ramps "A" & "C" and U.S.R. 35 to Sta. 1205+00 to be constructed on this Project.
Ramps "B" & "D", Main Street and U.S.R. 35 beyond Sta. 1205+00 are to be constructed on ROS-35-22.82

PROPOSED BRIDGE DATA

TYPE: Continuous Concrete Slab with Concrete Substructure Separate Structures.
SPANS: 44'-0" – 55'-0" – 44'-0"
ROADWAY: 40'-0" f/f Parapet Walls.
LOAD FREQUENCY: CF-400 (57)
SKEW: 1°-00' L.F. Left Bridge
4°-00' R.F. Right Bridge
WEARING SURFACE: 1" Monolithic Concrete.
APPROACH SLABS: AS-1-54, 25'-0" Long.
RAILING: Aluminum Rail and Supports and Concrete Parapets.
ALIGNMENT: Tangent.

FOUNDATION SOUNDINGS

Foundation design and foundation quantities are based on a study of rod soundings and soil-sampling soundings made at this site. This sounding information may be inspected in the office of the Bureau of Bridges in Columbus or in the Division Office, but the State does not guarantee the accuracy thereof.

Required Clearance = 23'-0"
Actual Critical Clearance-Point (1) = 23'-1⅛"
Actual Critical Clearance-Point (2) = 23'-1½"

* FIRST TEST PILE: Payment will be made for only one First Test Pile. It may be driven for either Right Bridge or Left Bridge.

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS-1-54 revised 7-5-62 and AR-1-57 revised 4-2-62, and Supplemental Specification 5101 dated 7-12-62.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with current revisions thereof.

FOUNDATION BEARING PRESSURE: Abutment footings are designed for a maximum bearing pressure of 2 tons per sq. ft.

PILES shall be driven to a minimum bearing capacity of 45 tons per pile for the Piers.

MACHINE FINISH: The concrete bridge deck shall be finished by the use of a finishing machine.

EMBANKMENT PROCEDURE: See Note on Sheet 15.

CONSTRUCTION CLEARANCE of 20 ft. vertically above the top of the railroad rails and 8 ft. horizontally from the center of tracks shall be maintained at all times.

ALIGNING RAILROAD TRACKS: After the Contractor has completed all excavation and backfill adjacent to to the railroad tracks in compliance with Sec. E-2.04 and E-2.08 of the Construction and Material Specifications, subject to the Supervision of the Railroad Company, nothing in Sec. E-2.04, E-2.08 or G-8.07 of the Specifications shall be construed to hold the Contractor liable for aligning and resurfacing the railroad tracks.

SHEETING AND BRACING: Before construction is started, eight sets of prints showing details of the sheeting and bracing to be used for excavation adjacent to the railroad tracks shall be submitted to the Director for approval by the Department of Highways and by the Railroad Company.

RAILROAD AERIAL LINES will be relocated by the railroad. The Contractor shall use all precautions necessary to see that the lines are not disturbed during the construction stage and shall cooperate with the railroad in the relocation of these lines. The cost of the relocation shall be included in the railroad force account work.

SECTION A-A

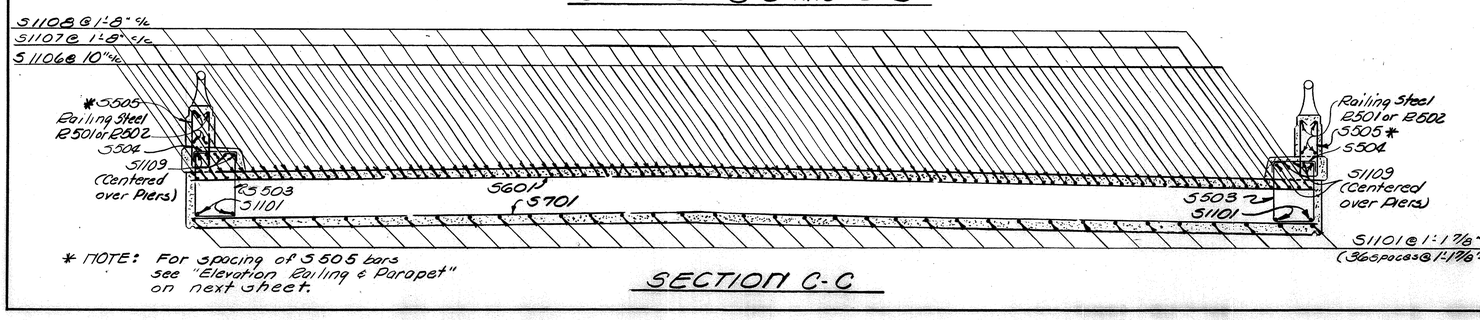
SECTION B-B AND D-D



* NOTE: For spacing of S505 bars see "Elevation Railing & Parapet" on next sheet.

SECTION C-C

~NOTES~

FOR PLACEMENT of S1106, S1107 and S1108 bars see next sheet.

FOR PARAPET JOINTS, Railing Post Spacing and Railing Steel see next sheet.

CONSTRUCTION JOINTS: One construction joint in the bridge slab may be placed 1'-0"± off the transverse centerline of the middle span so that it will miss the transverse reinforcing steel. One longitudinal joint on the center-line of roadway will be permitted. A horizontal construction joint shall be placed between each curb and the top of the slab. A horizontal construction joint will also be placed between each parapet wall and the top of each curb.

CAMBER of 1/300 of the span shall be provided in each span, in addition to that required for conformance with the profile of the highway, to allow for dead load deflection. This is the amount of camber required before falsework is released. To obtain this, proper allowance shall be made for the deflection of falsework members.

S601 AND S701 BARS may be furnished in one length as shown or in pairs of different lengths, lapped thirty diameters at the centerline of roadway or beyond a longitudinal construction joint at the centerline of roadway, at the option of the contractor. Determination of the pay quantity will be according to the number and length of bars as shown hereon.

CONCRETE Shall be Class "C"

See Next Sheet for "Additional Notes"

NOTES

BAR SIZE is indicated in the bar mark. The first digit where three digits are used, and the first two digits where four digits are used, indicate the bar size. For example A501 is a number 5 size bar and P1001 is a number 10 size bar.

RAILING STEEL in the parapet wall is included with Item S-14 Railing for payment.

GENERAL NOTES

REFERENCE: shall be made to standard drawing FSB-1-62, dated 1-15-63, AS-1-54, revised 7-5-62, AE-1-57 revised 4-2-62 and Supplemental Specifications S-101 dated 7-12-62 and S-307 dated 10-1-64.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highay Structures" of the State of Ohio, Department of Highways, dated 9-1-57 together with current revisions thereof.

FOUNDATION BEARING PRESSURE: Abutment footings are designed for a maximum bearing pressure of 1.5 tons per square foot.

PILES shall be driven to a minimum bearing capacity of 44 tons per pile for the piers.

EXCAVATION QUANTITY for abutments and piers includes the removal of All material required for their construction.

EMBANKMENT PROCEDURE: The embankment shall be placed and compacted up to the finished spill-thru slope and to the level of the subgrade for a distance of 200 feet back of the abutments after which excavation shall be made for the abutments.

For HIGH STRENGTH STEEL BOLT note, see Sheet 222

WELDING OF STRUCTURAL STEEL shall be Class "A", except as otherwise shown. Welds shown as field welds may, at the option of the contractor be made in the shop. Class "B" welds are shown Thus: B

SURFACE FINISH OF CONCRETE: The requirements of Sec. S-122, Rubbed Finish, shall apply to the following exposed concrete surfaces:

(a) The entire superstructure except the top and bottom surfaces of safety curbs and roadway.

(b) The entire surface of piers and abutments except bridge seats, backwalls and the face of spill-through abutments between outside girders.

GIRDER ERECTION: The contractor shall submit to the Director for approval 3 prints showing his proposed erection procedure for the plate girders.

MACHINE FINISH: At the Contractor's option, the concrete deck may be finished by the use of a finishing machine.

SECTION "A"-"A"

(Applies where intermediate crossframe is welded to a pier reaction stiffener plate. At abutment reaction stiffeners, one ¼" fill plate welded to intermediate stiffener shall be used.

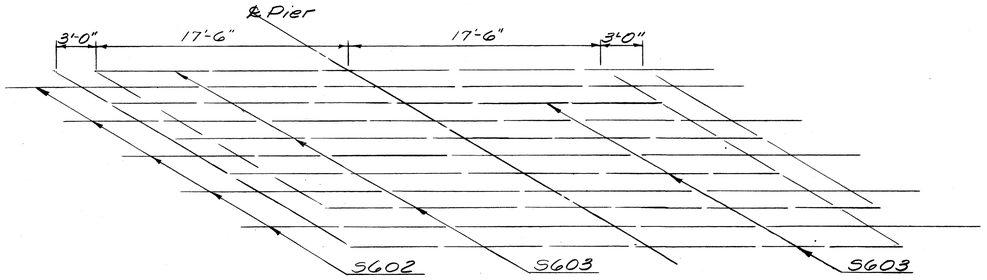

DIAGRAM SHOWING STAGGER OF S603 BARS OVER PIERS

NOTES

CONCRETE shall be Class "C."

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of concrete shall progress upgrade. The slab may be placed in sections between transverse construction joints which are parallel to transverse reinforcing steel and are located near the center of any span.

DECK SLAB HAUNCH: The haunch in the superelevated deck slab adjacent to the top of steel girders, which is shown as 12" wide, may vary from this dimension between the limits of 9" and 12" on low side and between 12" and 15" on high side. Except on the high side, the maximum slope shall not exceed 3" per foot. Payment for deck slab concrete shall be based on the 12" width.

SLAB THICKNESS shown includes 1" for monolithic wearing surface. The slab thickness shown over the girders is the nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension, even though deviation from it may be necessary because the top flange of the girder may not have the exact camber or conformation required to place it parallel to the finished grade.

STIFFENER DETAILS
NOTES
All flange butt-welds shall be ground flush.
(A) Weld after placing at least one pass on other side
Optional shop splices will be permitted in the webs and flanges of girders but their location shall be submitted to the Director for approval.
Weld from both sides. Welds must be centered on joint

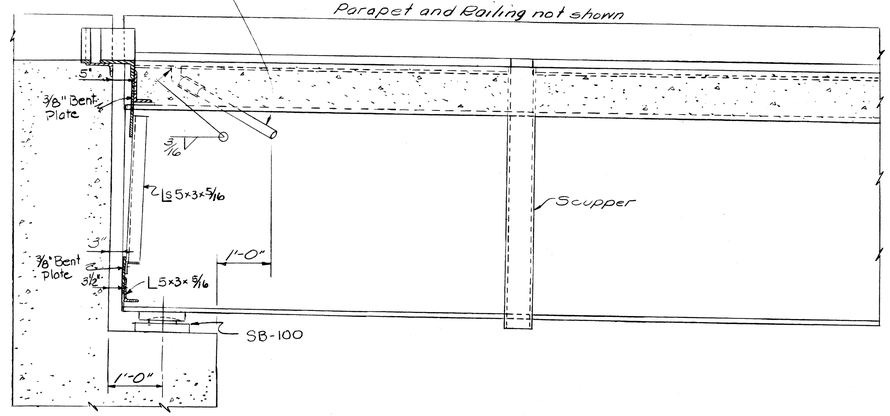
PART PLAN AT ABUTMENT



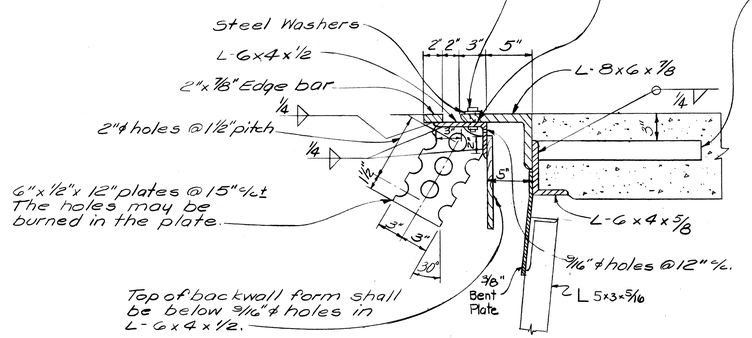
SECTION "A"-"A"

No joints will be permitted in end dam angles attached to the superstructure. The portion attached to the backwall shall be placed in segments not less than 2'-0" in length with a joint at the Contraction joint in the backwall. These shall be closely butted but shall not be welded.

5/8" x 2" bolts at not more than 2'-0" ℄ with nuts tack-welded to under side of lower angle. 1 1/16" holes in upper angle. Center 5/8" bolts in 1 1/16" holes. Apply flake graphite between washers and angle. Turn bolt tight and release one-half turn. Remove bolts as soon as concrete has set, preferably within two hours after placing, to avoid damage due to temperature expansion or contraction of superstructure. Fill holes with bituminous material.

This contact surface shall not be painted and shall be lubricated with flake graphite prior to placing of backwall concrete.

Anchor bars 2 x ½ x 1'-6" @ 1'-3" ℄ placed parallel with longitudinal reinforcing steel



SECTION "B"-"B"

Omit shop coat on all portions of end dam. Portions in contact with steel or with concrete shall not be painted. All other portions shall be cleaned and given the shop coat in the field as well as the two field coats.

~NOTES~

BAR SIZE is indicated in the bar mark. The first digit where three digits are used, and the first two digits where four digits are used, indicate the bar size. For example, A501 is a number 5 size bar and P1001 is a number 10 size bar.

RAILING STEEL in the parapet wall is included with Item S. 14 Railing for payment.

SPIRAL REINFORCING BARS:
The "Length" shown in the steel list for the spiral bars is the distance from the top of the footing to the bottom of the pier cap. The "Number of Turns" shown is the "Length" divided by the pitch plus three turns (total number of closed coils) expressed as the nearest whole number.
Spiral reinforcing bars shall not have deformations but shall in all other respects conform to Item S-4.
1½ closed coils shall be provided at the ends of each spiral unit.
Four steel channel, tee or angle spacers weighing approximately 0.68 lb. per lin. ft. of spacer, shall be provided for each spiral unit. They shall be equally spaced along the periphery of the coil. The number of pounds of these spacers based on 0.68 lb. per lin. ft. will be paid for as reinforcing steel and is included in the tabulated quantity of spiral bars.

GENERAL NOTES

REFERENCE shall be made to Standard Drawing RB-1-55 revised 2-2-59, AR 1-57 revised 4-2-62, AS 1-54 revised 7-5-62 and Supplemental Specification S-307, dated 10-1-64 and S-101 dated 7-12-62

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57 together with current revisions thereof.

EXCAVATION QUANTITY for the abutments includes the removal of fill material between the surface of the proposed embankment and the bottom of footings. Excavation quantity for piers includes the removal of material between the surface of the proposed channel and the bottom of footings.

PILES shall be driven to a minimum bearing capacity of 37 tons per pile for the abutments and 48 tons per pile for the piers.

STRUCTURAL STEEL: Steel used for the fabrication of rollers and roller bearing plates shall conform to the requirements of A. S. T. M. Designation A-237-55 (Class B) having a minimum yield strength of 55,000 p s i. All other structural steel shall conform to the requirements of Sec. M-7.4 (a).

WELDING of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the contractor, be made in the shop. Class "B" welds are shown thus B

POROUS BACKFILL shall extend upward to the approach slab, paved berms and surface of the earth shoulders and outward to the surface of the embankment slopes as shown on the General Plan and Elevation and Abutment Drawings. Excavation therefor, in excess of that required for construction of the abutment, shall be considered as paid for in the bid price per cu. yd paid for porous backfill.

EMBANKMENT PROCEDURE: The embankment shall be placed and compacted up to the finished spill-thru slope and to the level of the subgrade for a distance of 200 feet back of the abutments for a minimum period of 30 days after which excavation shall be made for the abutments and piles driven.

FIRST TEST PILE: Payment will be made for only one first test pile. It may be driven for either the Right or Left Bridge

GIRDER ERECTION: The Contractor shall submit to the Director for approval 3 prints showing his proposed erection procedure for the plate girders.

MACHINE FINISH: The concrete bridge deck shall be finished by the use of a finishing machine.

For HIGH STRENGTH STEEL BOLT note, see Sheet 222.

PART PLAN S628 AND S629 OVER PIER NO'S. 3 & 7.

NOTES

CONCRETE shall be Class "C".

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of concrete shall progress upgrade. The slab may be placed in sections between transverse construction joints which are parallel to transverse reinforcing steel and are located near the center of any span.

DECK SLAB HAUNCH: The haunch in the deck slab adjacent to the top of the steel girders, which is shown as 12" wide, may vary from this dimension with a minimum of 9" and maximum of 15". Maximum slope of haunch shall be one vertical to four horizontal. Payment for deck slab concrete shall be based on the 12" width.

SLAB THICKNESS shown includes 1" for monolithic wearing surface. The slab thickness shown over the girders is the nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension. even though deviation from it may be necessary because the top flange of the girder may not have the exact camber or conformation required to place it parallel to the finished grade.

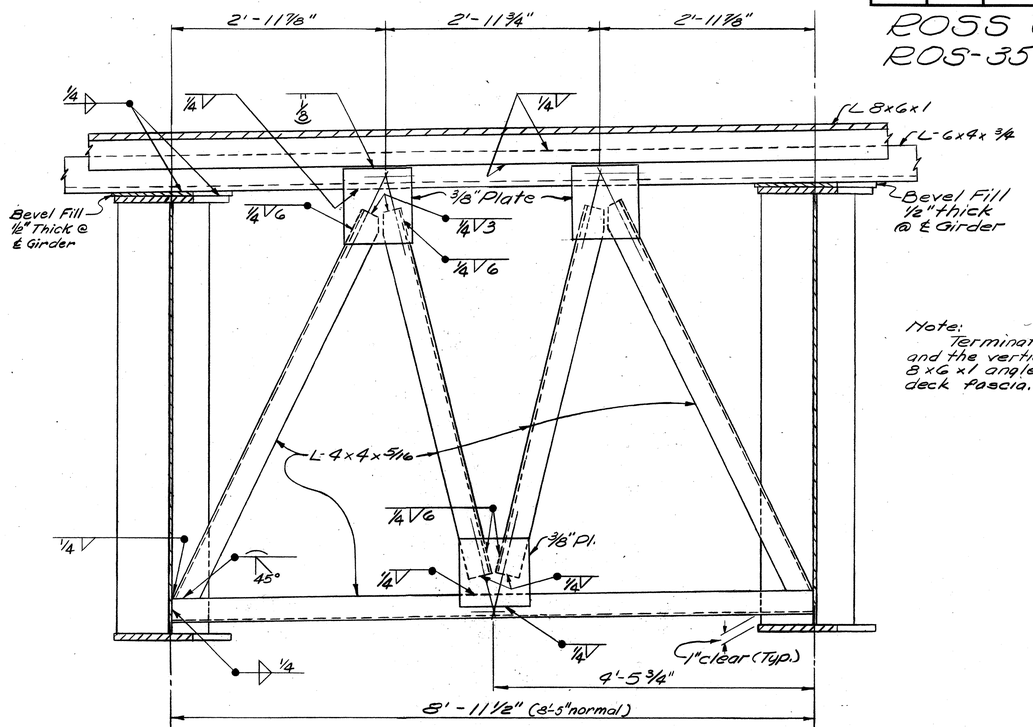
PART PLAN
END DAM

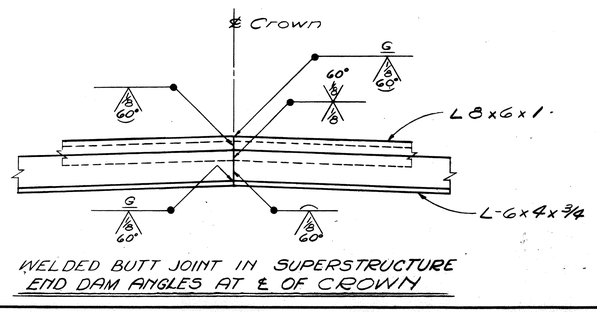
PART PLAN
END CROSSFRAME



SECTION "B"-"B"

Note:
Terminate the 6x4x3/4 angle and the vertical leg of the 8x6x1 angle on line with deck fascia.

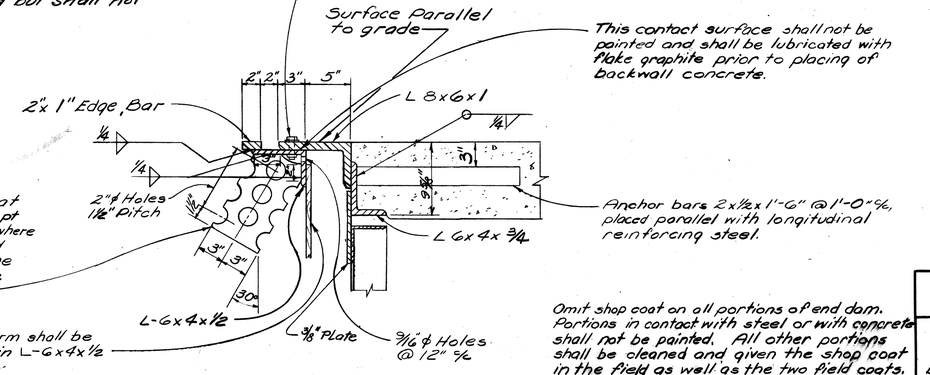
A welded butt joint in the end dam along the centerline of crown will be required for that portion of the end dam attached to the superstructure. The portion attached to the backwall shall be placed in segments not less than 6'-0" in length, with one of the joints at the apex of the crown and another at the abutment contraction joint. These shall be closely butted but shall not be welded.



WELDED BUTT JOINT IN SUPERSTRUCTURE
END DAM ANGLES AT ℄ OF CROWN

NOTE: "G" indicates grinding

3/8" x 2" bolts at not more than 2'-0" ℄ with nuts tack-welded to under side of lower angle. 1 1/16" holes in upper angle. Center 3/8" bolts in 1 1/16" holes. Apply flake graphite between washer and angle. Turn bolt tight and release one-half turn. Remove bolts as soon as concrete has set, preferably within two hours after placing, to avoid damage due to temperature expansion or contraction of superstructure. Fill holes with bituminous material.



SECTION "A"-"A"

Omit shop coat on all portions of end dam. Portions in contact with steel or with concrete shall not be painted. All other portions shall be cleaned and given the shop coat in the field as well as the two field coats.

STIFFENER DETAILS

Supplementary to Sec. S-7.14, these stiffners shall have contact bearing with the compression flange, but may have a clearance of not more than 1/8 inch from the tension flange. The top flange shall be considered the tension flange thru Dimn. "A" to Dimn. "I" as indicated on "Girder Elevations". At all other locations, the bottom flange shall be considered the tension flange. In shop painting care shall be taken to make certain that paint is forced through from one side to the other of the 1/8" opening.

EMBANKMENT PROCEDURE:
The embankment shall be placed and compacted up to the finished spill-thru slope and to the level of the subgrade for a distance of 200 feet back of the abutments, after which excavation shall be made for the abutments. The embankment at the forward abutment is to be placed as part of an adjacent project, ROS-35-22.82.

GENERAL NOTES

REFERENCE shall be made to Supplemental Specifications S-307 revised 10-1-64 and to Standard Drawings FSB-1-62 dated 1-15-63, AS-1-54, revised 7-5-62, modified as per plan and AR-1-57, revised 4-2-62, and Supplemental Specification, S-101, dated 7-12-62.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57 together with current revisions thereof.

EXCAVATION QUANTITY includes the removal of fill material required for construction of the abutments.

FOUNDATION BEARING PRESSURE: Abutment footings are designed for a maximum bearing pressure of 1.40 Tons per sq. ft. Pier footings are designed for a maximum bearing pressure of 2.20 Tons per sq. ft.

WELDING of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the Contractor, be made in the shop.
Class "B" welds are shown thus: B

SURFACE FINISH OF CONCRETE: The requirements of Sec. S-1.22, Rubbed Finish, shall apply to the following exposed concrete surfaces:

a. The entire superstructure except the top and bottom surfaces of safety curb and roadways.

b. The entire surface of Piers and Abutments except bridge seats, backwalls, and the face of spill-through abutments between outside beams.

MACHINE FINISH: At the Contractor's option, the concrete deck may be finished by the use of a finishing machine.

UTILITY LINES: All expense involved in relocating (installing) the affected utility lines shall be borne by the owners. The Contractor and Owners are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to a minimum.

NOTES:
CONCRETE for abutments shall be Class "E".

POROUS BACKFALL shall extend upward to the approach slab and outward to the abutment wings. Excavation therefor in excess of that required for construction of the abutments shall be considered as paid for in the bid price per cu.yd. paid for porous Backfill.

SEE STANDARD DRAWING AR-1-57 for Details of aluminum railing and concrete parapet.

ALUMINUM RAILING and Concrete Parapet Wall are included with Item S-14, Railing for payment.

ALUMINUM RAILING on abutment Wing-walls shall be continuous.

NOTES

CONCRETE shall be Class 'C' for Superstructure.

DECK SLAB HAUNCH : The Haunch in the deck slab adjacent to the Top of the steel beams, which is shown as 9" wide, may vary from this dimension with a minimum of 6" and a maximum of 12". Maximum slope of haunch shall be one vertical to four horizontal. Payment for deck slab concrete shall be based on the 9" width.

* This is a nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension even though deviation from it may be necessary because the Top Flange of the beam may not have the exact Camber or conformation required to place it parallel to the Finished grade.

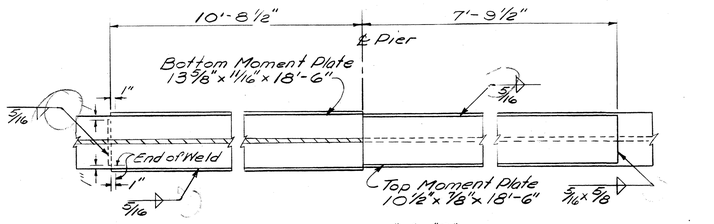
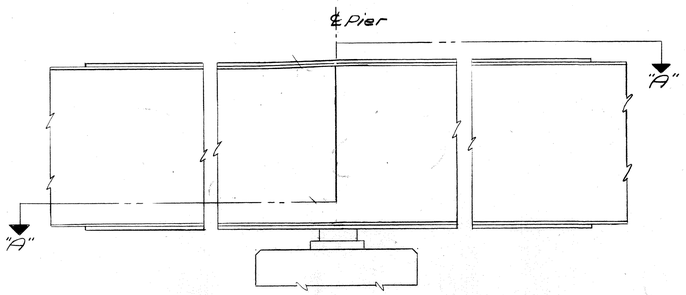
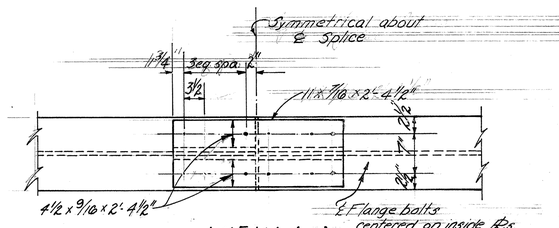
STEEL FRAMING PLAN



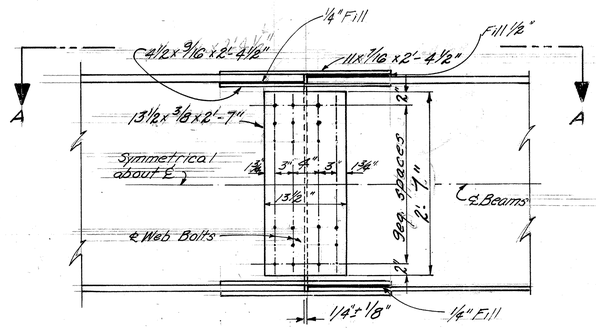
SECTION "A"-"A"



BEAM ELEVATION



VIEW A-A



BEAM SPLICE DETAIL

Fills shown are based on nominal beam dimensions. In fabrication, fill sizes shall be based on actual beam dimensions.

HIGH STRENGTH STEEL BOLTS: Under Sec. 3-710, High-Strength Steel Bolts, Nuts and Washers, paragraph two(2) shall be completely revised and the last sentence of paragraph four (4), revised to read as follows.

"In the final assembly of the parts to be bolted, drift pins shall be placed in a sufficient number of holes (not less than 25 percent for field erection) to provide and maintain accurate alignment of holes and parts, sufficient bolts shall be installed and brought to a snug tight condition to bring the parts into complete contact. Bolts shall then be installed in any remaining open holes and tightened completely by calibrated wrenches or by the turn-of-nut method. Drift pins shall then be replaced with bolts, tightened in the same manner."

"Bolt lengths determined by the use of Table No. 1 shall be adjusted to the next ¼-inch length increment."

USE 1"ø High Strength Steel Bolts.

CONCRETE DECK PLACING:
In order to facilitate water curing of the concrete of the deck slab the placing of concrete shall progress upgrade. The slab may be placed in sections, between transverse construction joints which are parallel to transverse reinforcing steel and are located near the center of any span.

ADDITIONAL NOTES:
For additional notes see General Plan and Elevation.

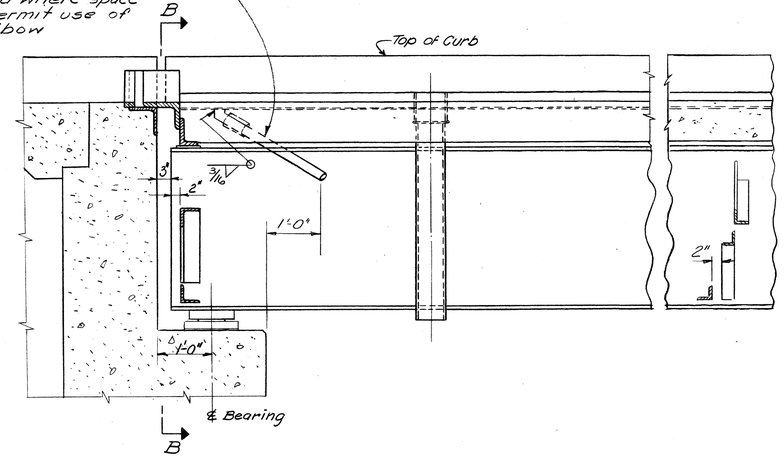
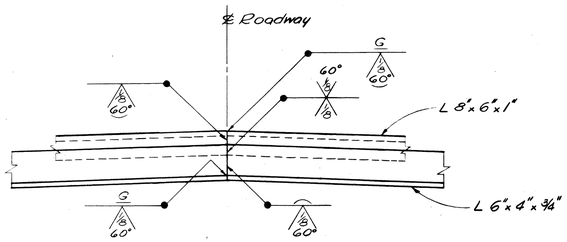
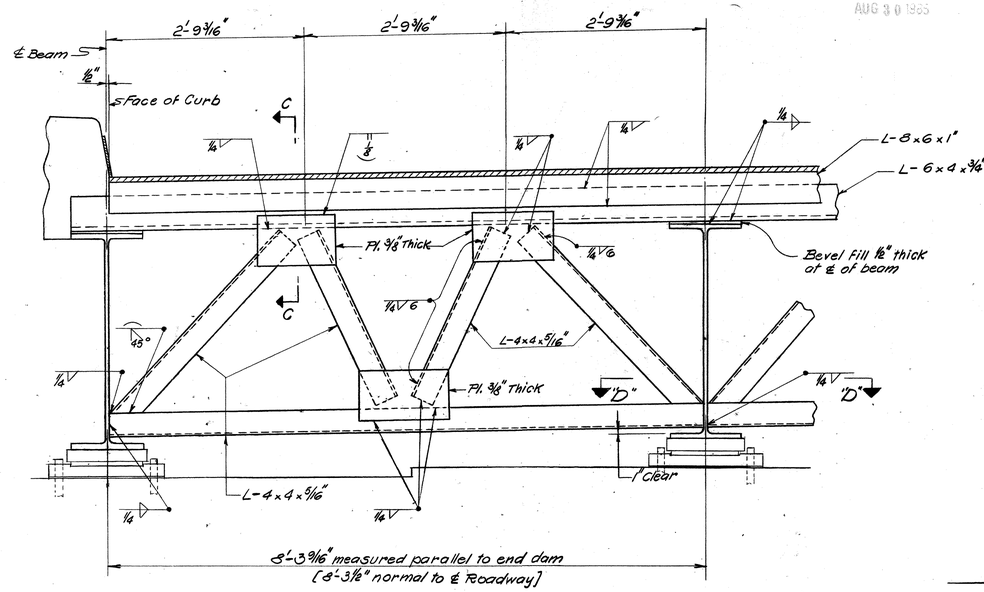
2" Dia. standard pipe drain at end of Bulb anglegutter where grade slopes down to end dam. Use Std. elbow and coupling. A welded bend may be used where space does not permit use of standard elbow



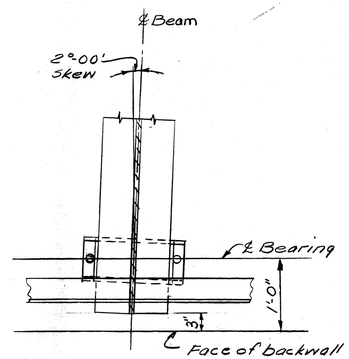
SECTION A-A



WELDED BUTT JOINT IN SUPERSTRUCTURE END DAM ANGLES AT ℄ OF ROADWAY

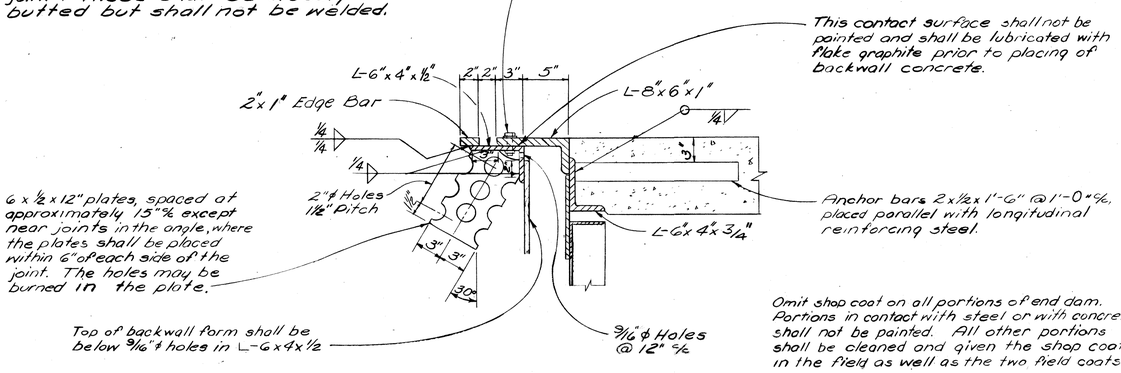


SECTION B-B



SECTION "D"-"D"

A welded butt joint in the end dam along the centerline of roadway, will be required for that portion of the end dam attached to the superstructure. The portion attached to the backwall shall be placed in segments not less than 6'-0" in length, with one of the joints at the apex of the crown, and an extra joint at the contraction joint. These shall be closely butted but shall not be welded.



SECTION C-C

⅝"x 2" bolts at not more than 2'-0"℄ with nuts tack-welded to under side of lower angle. 1 1/16" holes in upper angle. Center ⅝" bolts in 1 1/16" holes. Apply flake graphite between washer and angle. Turn bolt tight and release one-half turn. Remove bolts as soon as concrete has set, preferably within two hours after placing, to avoid damage due to temperature expansion or contraction of superstructure. Fill holes with bituminous material.

This contact surface shall not be painted and shall be lubricated with flake graphite prior to placing of backwall concrete.

Omit shop coat on all portions of end dam. Portions in contact with steel or with concrete shall not be painted. All other portions shall be cleaned and given the shop coat in the field as well as the two field coats.

NOTES

DECK DRAINAGE: Scuppers shall be made of steel. Milled joints will be permitted in bulb angles but individual lengths shall be as long as practicable. Gutters shall be accurately adjusted for alignment and grade with allowance for dead load deflection before concrete is placed. Welding for scuppers shall be continuous fillet weld. Steel gutters and supports are included under Item S-7, structural steel.

SCUPPERS are paid for under Item S-29, scuppers.

- NOTES -

BAR SIZE is indicated in the bar mark. The first digit where three digits are used, and the first two digits where four digits are used, indicate the bar size. For example, A501 is a No. 5 size bar and P1001 is a No. 10 size bar.

RAILING STEEL in the parapet wall is included with Item S-14 Railing for payment.

SPIRAL REINFORCING BARS: The "Length" shown in the steel list for the spiral bars is the distance from the top of the footing to the bottom of the pier cap. The "Number of Turns" shown is the "Length" divided by the pitch plus three turns (total number of closed coils) expressed as the nearest whole number. Spiral reinforcing bars shall not have deformations but shall in other respects conform to Item S-4. 1½ closed coils shall be provided at the ends of each spiral unit. Four steel channel, tee or angle spacers weighing approximately 0.68 lb. per lin. ft. of spacer, shall be provided for each spiral unit. They shall be equally spaced along the periphery of the coil. The number of pounds of these spacers based on 0.68 lb. per lin. ft. will be paid for as reinforcing steel and is included in the tabulated quantity of spiral bars.
