GENERAL NOTES

GENERAL NOTES

GENERAL

DESIGN STANDARDS

THE GEOMETRIC DESIGN FOR THE ROADWAY AND STRUCTURES WHICH COMPRISE THIS PROJECT IS BASED ON THE FOLLOWING DESIGN SPEEDS AS OUTLINED BY THE A.A.S.H.O. POLICIES ON GEOMETRIC HIGHWAY DESIGN:

FREEWAY	50 MPH
RAMPS	35 MPH

MINIMUM HORIZONTAL AND VERTICAL SIGHT DISTANCES HAVE BEEN PROVIDED, BASED ON THE A.A.S.H.O. POLICIES ON GEOMETRIC HIGHWAY DESIGN, AND CONSISTENT WITH THE DESIGN SPEEDS OF THE VARIOUS ROADWAYS.

FIELD OFFICE

THE CONTRACTOR SHALL PROVIDE A SUITABLE FIELD OFFICE IN ACCORDANCE WITH SEC. S-0.01(b) HAVING A MINIMUM OF 500 SQ. FT. OF FLOOR SPACE. THE CONTRACTOR SHALL HAVE A TELEPHONE INSTALLED AND MAINTAINED DURING CONSTRUCTION OF THIS PROJECT.

PERMITS, LAWS AND REGULATIONS

THE CONTRACTOR SHALL SECURE, AT HIS OWN EXPENSE, ALL NECESSARY PERMITS FROM THE MUNICIPAL OR OTHER PUBLIC AUTHORITIES, SHALL GIVE ALL NOTICES REQUIRED BY LAW OR MUNICIPAL ORDINANCES, AND SHALL PAY ALL FEES AND CHARGES INCIDENT TO THE DUE AND LAWFUL PROSECUTION OF THE WORK COVERED BY THIS CONTRACT.

UNDERGROUND UTILITIES

THE LOCATIONS OF THE UNDERGROUND UTILITIES SHOWN ON THE PLANS HAVE BEEN OBTAINED BY DILIGENT FIELD CHECKS AND SEARCHES OF AVAILABLE RECORDS. IT IS BELIEVED THEY ARE ESSENTIALLY CORRECT, BUT THE STATE OF OHIO MAKES NO GUARANTEES AS TO THEIR ACCURACY OR COMPLETENESS.

UTILITY NOTE

ANY AND ALL WORK REQUIRED FOR REMOVING, RELOCATING AND CONSTRUCTION OF NEW FACILITIES FOR PRIVATE OR PUBLIC UTILITIES WILL BE DONE BY AND AT THE EXPENSE OF THE RESPECTIVE OWNERS UNLESS OTHERWISE NOTED ON THE PLANS.

WATER METER BOXES

THE CITY WATER DEPARTMENT WILL RELOCATE ALL PRIVATELY OWNED WATER METER BOXES AND THIS ITEM WILL NOT BE INCLUDED AS A PART OF THE WORK TO BE PERFORMED BY THE STATE CONTRACTOR.

WORK BY THE CITY OF CLEVELAND

THE CITY WILL PROVIDE FOR THE REMOVAL OR DISPOSAL OF ALL EXISTING BUILDINGS WITHIN THE LIMITS OF THE EASEMENT LINES TO THE TOP OF THE EXISTING FOUNDATIONS.

TRAFFIC

WHERE ANY OF THE WORK CALLED FOR UNDER THIS CONTRACT INVOLVES THE CLOSING OF EXISTING STREETS AND/OR THE RE-ROUTING OF TRAFFIC, THE CONTRACTOR FOR THIS PROJECT SHALL PROSECUTE TO THE FULLEST EXTENT THE WORK INVOLVED SO AS TO REDUCE TO A MINIMUM THE LENGTH OF TIME THAT THE STREETS CONCERNED WILL BE CLOSED TO TRAFFIC.

IN ADDITION TO THE ABOVE, SECTION G-4.05 "MAINTENANCE OF LOCAL TRAFFIC" WILL BE IN FORCE DURING THE ENTIRE LIFE OF THE CONTRACT.

ATTENTION IS DIRECTED PARTICULARLY TO THE NEED FOR PROVIDING ADEQUATE FACILITIES TO ACCOMMODATE SCHOOL CHILDREN AND OTHER PEDESTRIAN TRAFFIC IN THE VICINITY OF THE PROJECT. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN SUCH TEMPORARY BOARD WALKS, CINDER WALKS, HANDRAILS ADJACENT TO EXCAVATIONS, ETC. AS MAY BE NECESSARY TO ACCOMMODATE IN A REASONABLE AND SAFE MANNER PEDESTRIAN TRAFFIC IN THE VICINITY OF THE PROJECT.

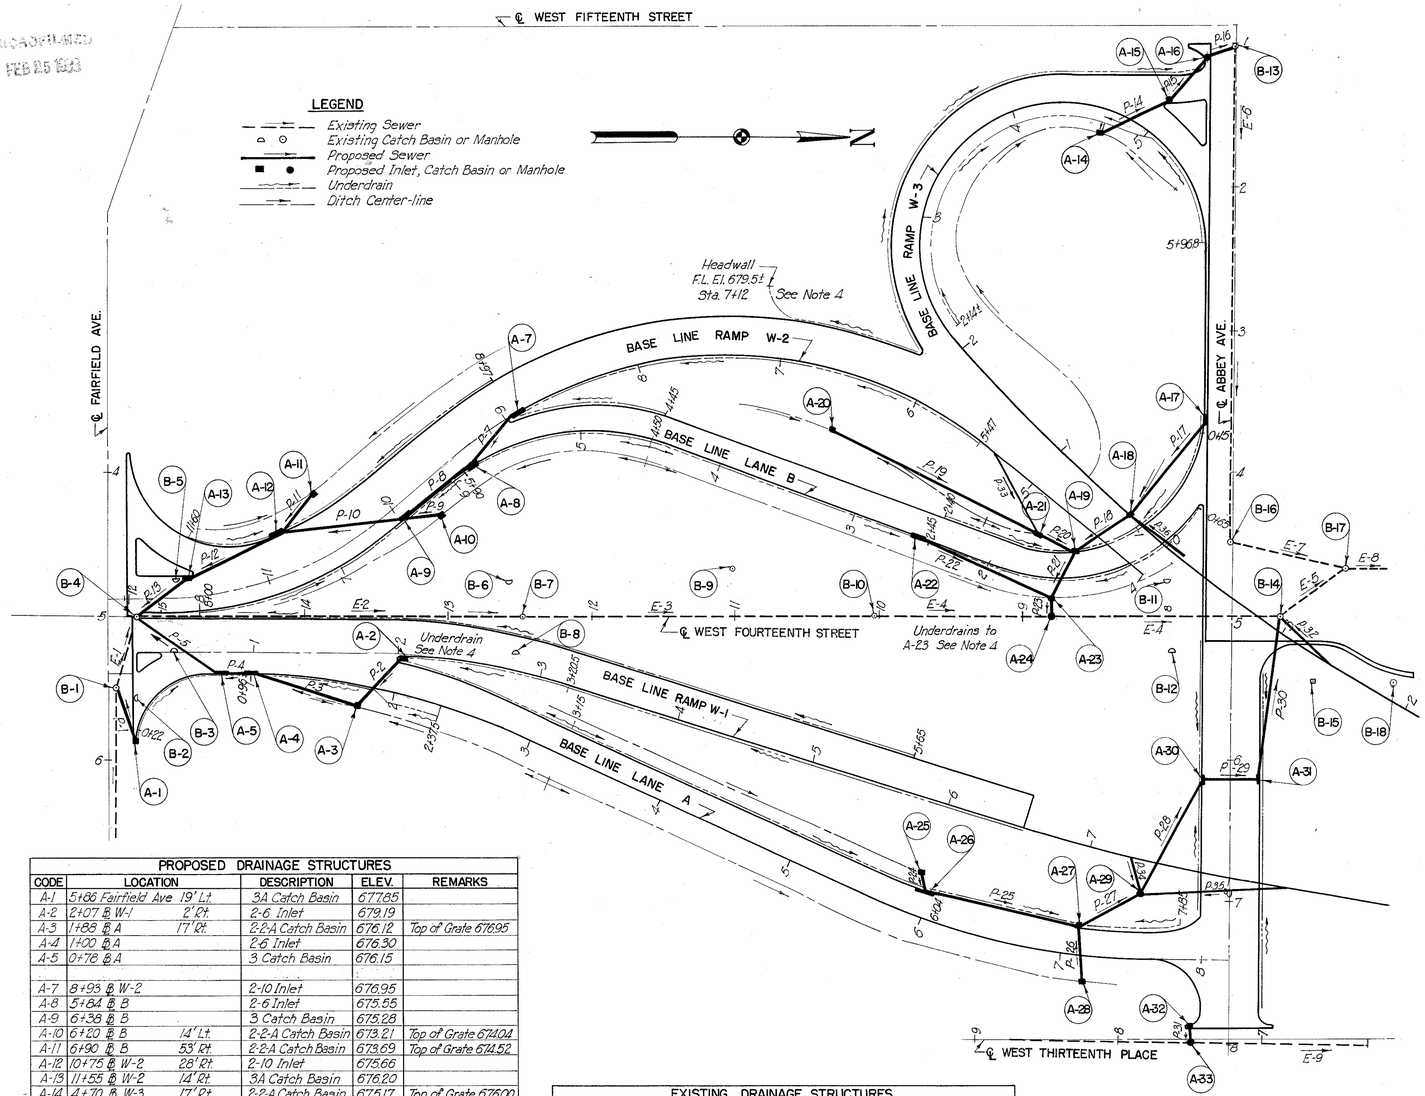
DRAINAGE PLAN



GENERAL NOTES

Sewers are designed by the Rational Formula based on a 10-year storm frequency flowing full.

Minimum Velocity of flow is 3.0 F.P.S. for main lines and 2.5 F.P.S. for laterals.

All stubs for bridge drainage are to be 12-inch diameter concrete pipe, set on line and grade as specified on the profiles and on the bridge plans. The stubs shall extend a minimum distance of 1 foot 0 inch outside the drainage structures.

Pipe sewers connected to existing catch basins are not shown on the plans. Where sewer pipes not shown are encountered during construction, the pipes shall be cut at the limits of construction and plugged to the satisfaction of the Engineer. Payment for cutting and plugging shall be included in the unit price bid for item E-1, "Excavation."

Payment for the removal and/or abandoning of pipe outlets necessitated by the abandoning of existing catch-basins or manholes, will be included in the unit price bid for Item 1-16, "Manholes, Catch Basins, or Inlets Abandoned," unless payment is otherwised authorized specifically under other items in the plans.

Where it is necessary under Item 1-8, "Manholes adjusted to grade" to replace unsatisfactory manhole frame and cover castings, payment for the new castings shall be made at the contract unit price bid per each for Item 1-8 "Manhole Frame and Cover (Light)" and Item 1-8 "Manhole Frame and Cover (Heavy)". Payment shall constitute full compensation for furnishing, hauling and placing all castings and any incidentals necessary to complete the item to the satisfaction of the Engineer.

2. DATUM FOR ELEVATIONS

All elevations are Regional Geodetic Survey Data.

3. BORINGS

Boring information, logs and samples of materials encountered may be examined in the Cleveland City Engineer's Office, but the borings are not guaranteed to present a complete picture of subsurface conditions to be encountered.

4. PILING

A. Piles shall be driven to a minimum bearing capacity of 40 tons for the abutments and retaining wall and 50 tons for the piers. The length of penetration of every pile shall be at least 80% of the estimated average pay length of the pertinent piers, abutment or retaining wall as indicated on the plans unless a lesser penetration is approved by the Director.

B. The pile space dimensions given on the plans are at the level of the bottom of footing.

5. UTILITIES

Any utility facilities encountered at the site of the work which will interfere with portions of the finished Freeway or structures, will be removed or relocated by others, unless otherwise shown. The Contractor shall coordinate his operations with the work of the utility owners or others who may be making the relocations and shall notify the owners of the utilities of his schedule sufficiently in advance to permit them to make the necessary alterations.

6. CLASS OF CONCRETE

All superstructure concrete shall be Class "C".

All substructure concrete shall be either Class "C" or Class "E" as shown in the plans.

7. GRAVEL

Gravel, if used as coarse aggregate, shall be according to Section M-3.93 instead of M-3.91 for Class "C" concrete in the superstructure. Gravel meeting the requirements of Section M-3.93 also may be used for other concrete in this structure.

8. CONCRETE FINISH

The railing parapets, curb faces, fascias of decks and exposed surfaces of substructure units and retaining wall shall receive a rubbed surface finish. All other exposed surfaces shall be governed by the provisions of Item S-1.

9. REINFORCING STEEL

Reinforcing steel shall conform to Item S-4 of the Construction and Material Specifications. Bars shall have deformations conforming to A.S.T.M. Designation A-305.

All laps in reinforcing bars at splices will be 30 bar diameters.

Bars shall be, unless otherwise shown, 3 inches clear from the face of the concrete in the bottoms of footings, 1 inch clear in slabs and 2 inches clear elsewhere.

Bar sizes are designated on the plans by numbers, the first digit in three digit marks and the first two digits in four digit marks indicate the size of the bar.

10. WATERPROOFING

Expansion and contraction joints shall be waterproofed as shown on the plans.

Type "C" waterproofing, for surfaces in contact with bituminous wearing surface, shall be furnished under another contract.

11. BITUMINOUS WEARING SURFACE

The bituminous wearing surface shall be furnished under another contract.

12. SUB DRAINAGE FOR BITUMINOUS WEARING SURFACE

The copper tubes required on the bridge deck slab, for sub-drainage, will be paid for at the contract unit price per cubic yard of superstructure concrete under Item S-1.

The steel angles over the copper tubes shall be furnished under another contract.

13. DIMENSIONS

Dimensions given on the plans are measured horizontally and at 60° F. unless shown otherwise.

14. STRUCTURAL STEEL

A. WELDED STEEL - The steel for beams A, B, C, D and E shall conform to A.S.T.M. Designation A-373. All other structural steel shall conform to either A.S.T.M. A-7 (as per Section M-7.4(a) of the Construction and Material Specifications) or to A-373.

B. All welding shall be Class "A".

C. CARBON STEEL CASTINGS - ~~Erected~~ Erection only, Item S-7, refers to the castings for the expansion joint at the West End Pier. They are on the construction site and shall be erected under this contract.

D. PAYMENT FOR STRUCTURAL STEEL - In accordance with Sec. S-7.28, the weight of waste material, such as is removed by burning, cutting, coping, clipping, machining, punching, drilling, etc., shall not be considered as pay weight. However, material removed to form rivet and bolt holes shall be included in the pay quantity provided that only those portions of the rivets and bolts projecting beyond the holes are included in the pay quantity. Furthermore, any thickness and weight of members in excess of that called for on the plans (due to overweight or other cause) shall not be included in determining the weight to be paid for, unless an increase in the size of a member has been requested by the Director.

E. Painting of superstructure metalwork shall be according to Item S-8 of the Construction and Material Specifications except as modified herein.

1. Coats of Paint

The paint shall be applied by brushing in four coats as follows:

a. A first coat of red lead paint applied in the shop on clean metal surfaces prepared for painting as specified in Section S-8.03.

b. A second coat of red lead paint applied in the field after erection. For surfaces that will be inaccessible after erection, this second coat may be applied either in the shop or in the field.

c. A third and a fourth coat consisting of white lead paint. The fourth coat shall be tinted a medium shade of gray that meets the approval of the Director of Highways and the City of Cleveland.

d. Light standards and the steel parts of handrails shall be painted with a first and a second coat of red lead paint as specified for the remainder of the structural steel, but the third and fourth coats shall be of aluminum paint.

2. Materials

a. The paint to be used for the first and second red lead coats shall be of the following composition and properties:

Pigment	Vehicle
Red lead (97% grade) - 99.6% (minimum)	Raw linseed oil 35% to 50%
Aluminum Stearate - 0.3 - 0.4%	* Pale heat bodied linseed oil (Z_2) 15% to 30%
	Volatile mineral spirits and drier 35% (maximum)

* The acid number of this oil shall not be over 11, the color not darker than 7 (Gardener 1933) and shall have a Wijs iodine value of 110 - 125.

Paint	First Coat	Second Coat
Pigment	73% (minimum)	77% (minimum)
Vehicle	27% (maximum)	23% (maximum)
Weight per gallon	21.0 Lbs. (minimum)	24.0 Lbs. (minimum)
Consistency	175 Gr to 250 Gr. (A.S.T.M. Method D562-42T or Federal Specification TT-P-141a, Method 428.1)	
Fineness of grind	5 (minimum)	

Drying Time-Set to Touch-6 Hours (maximum) and Dry through-36 Hours (maximum)

The paint shall be well ground, shall not settle excessively or cake in the container, shall be readily broken up with a paddle to a smooth uniform paint having good brushing properties. The paint, when brushed on a clean, smooth steel panel maintained in a vertical position, shall dry to a smooth uniform finish free from roughness, grit, unevenness, streaking, separation, running, curtaining and sagging. For contrast between the first and second coats, the second coat shall be tinted with lampblack-in-oil to change its color to a chocolate brown.

b. The white lead third and fourth coats of paint shall conform to Section M-9.6(b) of the Construction and Material Specifications.

c. The aluminum third and fourth coats of paint shall conform to Section M-9.12 of the Construction and Material Specifications.

15. HANDRAIL

The finished handrail shall be free of burrs, sharp corners and rough surfaces.

The final adjustment of the handrail shall be such that the aluminum tubing shall not depart more than 1/8 inch from correct line or grade, and shall show no abrupt kinks.

The Contractor shall furnish a pattern of the cast aluminum handrail post to the City of Cleveland for use in future replacement of damaged posts.

16. ROADWAY DRAINAGE SYSTEM

This item consists of all 6 inch round galvanized steel or wrought iron pipe, cleanouts, reducers, elbows, scuppers, and Type A and B hangers.

The 12 inch round pipe, including tees, from the piers and abutment to the inlets is included in the roadway quantities.

Notes for Driving Piles "A" Through "F"

The location of the 5 ft. brick sewer as shown on the plans is to be considered approximate only and before proceeding with any construction operations which might cause damage to the sewer, the contractor shall determine the exact location by borings, excavations, surveys, or other suitable means. If the location varies considerably from that shown and interferes with the piling, the design of the pier will be modified as required.

Pile driving operations shall be so conducted as to minimize vibration which might cause damage to the sewer. Driving shall be supplemented by air jetting or by pre-boring. Piling shall be driven successively on alternate sides of the sewer to avoid cumulative displacement.

The contractor shall, at his own expense and to the satisfaction of the city, repair any damage which may result from his construction operations.

Payment for the protection of the sewer against damage due to pile driving and payment for air jetting or pre-boring shall be considered as included in the price bid per linear foot of pile.

Note:
All piles are 14"ϕ cast in place reinforced concrete, battered 3 in 12 unless otherwise shown.
