GENERAL NOTES

STATIONING — The Stations within the limits of this project have been established from the plans of former construction projects. Copies of these plans are on file at the District One Office of the Ohio Department of Transportation, Lima, Ohio.

MOBILIZATION, AS PER PLAN — The Contractor shall provide a suitable Field Office having a minimum of 800 Sq.Ft. of floor space which shall be in accordance with 619.01 and 619.02. Payment shall be included in the lump sum price bid for Item 624, Mobilization, as per plan.

PIPE UNDERDRAINS — Any Pipe Underdrains broken or damaged as a result of construction operations shall be replaced by the Contractor at no cost to the State of Ohio.

PROFILE AND ALIGNMENT — The proposed pavement resurfacing course shall follow the alignment and profile of the existing pavement. Previous construction plans showing the original alignment and profile grade are on file for inspection if necessary at the Ohio Department of Transportation, District One Office. The proposed asphalt concrete overlay shall have a uniform thickness of approximately 3 inches.

CONTINGENCY QUANTITIES — The Contractor shall not order materials or perform work for plan items set up to be used "as directed by the Engineer" unless authorized by the Engineer. The actual work locations and quantities used at the Engineer's discretion shall be made a matter of record by incorporation into the final change order governing completion of this project.

GUARD RAIL REMOVED FOR STORAGE — Guard Rail, including **all posts and accessories designated for removal on this project shall be carefully dismantled and stored on the project for removal by State forces. All material not considered salvageable shall be disposed of as directed. All post holes** shall be carefully filled and tamped and the site cleaned and restored. The storage location shall be approved by the Engineer.
Payment for all of the above shall be at the unit price bid for Item 608, Guard Rail Removed for Storage, measured by the linear foot center to center of the terminal posts.

310 SUBBASE — In areas of pavement replacement where unsuitable subbase material is encountered, the Engineer shall require the replacement of the unsuitable subbase. Included in the General Summary is 500 Cu.Yds. of 310 Subbase, Type 1, Grading A to be used as directed by the Engineer for subbase replacement. The cost of removing and disposing of the unsuitable subbase and the reshaping of the subbase will be included in the unit price bid for Item 310 Subbase, Type 1, Grading A.

605 PIPE UNDERDRAINS, AS PER PLAN — 4" Unclassified Pipe Underdrains shall be installed at the locations shown in the plans, using 4" diameter plastic and polyethylene corrugated drainage pipe or tubing, heavy duty, meeting the requirements of 707.15 and backfilled in accordance with 605.03.
The existing asphalt paved shoulder adjacent to the existing pavement shall be sawed 6" wide to the full depth of shoulder pavement, then cut with a trenching machine to a 6" trench width down to the proposed grade. The 4" Underdrain pipe shall then be laid into, and if necessary, tamped into the 6" trench, care being taken not to damage the 4" Underdrain pipe. Stone backfill as per 605.03 and Item 301 Bituminous Aggregate Base shall be as per the details shown on Sheet 6.
Payment for all of the above materials and operations shall be at the unit price bid for Item 605-4" Unclassified Pipe Underdrains, as per plan.

LOCATION OF GUARD RAIL — The locations of Guard Rail runs as shown in these plans are subject to adjustment to assure that the planned installations will afford maximum protection for traffic.

ELEVATION DATUM — All elevations are based on U.S.G.S. datum.

EROSION CONTROL — Item 601 is provided in the plans for Erosion Control. Rock or turf of a stable nature will not be removed in order to place any of this item. The Engineer shall check and non-perform quantities or adjust locations and quantities for this item where indicated by field conditions during construction.

ITEM SPECIAL - PAVEMENT SAWING — All concrete pavement repair areas will be located by the Engineer and marked with paint prior to the start of pavement sawing operations. The existing concrete pavement shall be sawed full depth at the limits of the designated areas, thereby providing a vertical face to avoid spalling at the bottom edge of the existing concrete and to facilitate removal. The Contractor may elect to make additional cuts to facilitate the removal of pavement; however only those cuts designated by the Engineer will be measured for payment. An estimated quantity of Pavement Sawing has been included in the General Summary for use as directed by the Engineer.

PAVEMENT REMOVAL — After sawing at the designated joint repair locations, all existing pavement and loose and broken material shall be removed and disposed of outside the limits of the project.

WATERING PERMANENT SEEDED AREAS — The following estimated quantity to be used as directed by the Engineer to promote growth and to care for the permanent seeded areas as per 659.09; 659 WATER 10 M. Gal.

ITEM 617 COMPACTED AGGREGATE — In addition to the calculated quantities, an estimated quantity of 500 Cu.Yds. of Item 617 Compacted Aggregate is included to be used as directed by the Engineer for the purpose of filling ruts and depressions in the area adjacent to the paved shoulders.

ITEM 617 — An estimated quantity of 50 M. gallons of water is included in this item to aid compaction. Its use shall be as directed by the Engineer.

DECK OVERLAY — Surface preparation for concrete repair of bridge decks, deck patching, and concrete overlay of bridge decks shall be performed in accordance with Supplemental Specification 845, unless such requirements are modified in these plans. Quantities shown for Latex Modified Concrete Overlay, Variable Thickness, and Full Depth Repair are estimated quantities to be used as directed by the Engineer after the deck has been sounded.
Placement of the concrete overlay shall be completed during the night, between official sunset and sunrise, unless otherwise authorized by the Engineer.
In the early Spring or late Fall the concrete overlay may be placed other than at night upon approval of the Engineer if all of the following conditions are met and documented throughout the time of placement:
Maximum wind velocity = 10 M.P.H. Maximum concrete temperature = 70°F.
Minimum humidity = 40% Maximum air temperature = 70°F.
All other portions of Item 511 shall apply, except those which are in conflict with the above.
Longitudinal joints in the concrete overlay are permitted but only to the extent necessary to accommodate the width of the finishing machine or to allow for maintenance of vehicular traffic, or to facilitate changes in roadway crown, except as approved by the Director or as indicated on the plans. Joints shall not be used adjacent to deck edges.

ITEM SPECIAL - LIGHTING FOR NIGHT PLACEMENT OF CONCRETE DECK OVERLAYS — The Contractor shall submit to the Director a plan for adequate lighting of the work areas at least fifteen (15) calendar days prior to placing the overlays, and approval must be granted before the work begins.
Payment for this item shall be made at the contract price bid per unit and shall include all labor, generators, power supplies, fuel, electrical, wiring, lights and all other incidentals necessary to complete this item. A unit shall be all the lighting necessary to complete all phases of the overlay operation on approximately one-half of each structure. An estimated quantity of 12 units has been included in the General Summary for this purpose.

TRAFFIC MAINTENANCE — One lane traffic areas shall be controlled with temporary traffic control devices arranged as indicated in the "Ohio Manual of Uniform Traffic Control Devices for Streets and Highways" current edition, and the application standards appearing in these plans. The Contractor shall furnish, place and maintain yellow alternating Flasher Beacon Lights on all "Road Construction Ahead" signs when and as directed by the Engineer. It shall be understood that the cost of Electrical Service shall be included in the lump sum bid for Item 614 Maintaining Traffic.
The maximum length of any one lane traffic zone shall be two miles. The minimum distance between one lane traffic zones shall be two miles.

No ramp shall be closed without prior approval of the Engineer and District Traffic Engineer. The Contractor shall notify the Engineer and District Traffic Engineer at least two weeks in advance of his intention to close a ramp so that traffic may be routed to other access points.
During the initial first day set-up period and the last day tear-down period of each traffic control sequence, a law enforcement officer with patrol car shall be present to assist in traffic control operations. During the actual placing of the deck overlay or other times the Contractor may at his option use such an officer to assist in traffic control. The use of the law enforcement officer as required by the plans shall be paid for on a unit price (hourly - est. 60 hrs.) basis under the item Special shown. All optional use of such an officer and all other labor, equipment and materials required for traffic control shall be included in the lump sum price bid for Item 614, Maintaining Traffic.
Lane widths for all closings shall be a minimum of 12 feet.

ALTERNATE METHODS — If the Contractor so elects, he may submit Alternate Methods for the Maintenance of Traffic, provided the intent of the above provisions are followed and no additional inconvenience to the traveling public results therefrom. No alternate plan shall be placed into effect until approval has been granted, in writing, by the Director of Transportation.

ITEM 202 - RAISED PAVEMENT MARKERS REMOVED FOR STORAGE — Raised Pavt. markers shall be removed in a manner that prevents damage to the castings. All depressions caused by removal of the markers shall be filled with 848 to the existing road surface prior to resurfacing. Contractor shall provide crates and neatly stack the Raised Pavement Markers in the crates (quantity marked on outside). The crates shall be placed on pallets that can be lifted by crane or forklifts. Crates holding the markers shall be stored on the project site as directed by the Engineer. All costs to be included in the contract price bid for Item 202 - Raised Pavement Markers for Storage - 2009 Each.

GENERAL NOTES

1. THIS WORK AREA TRAFFIC CONTROL APPLICATION SHALL BE EMPLOYED WHEN THE LATERAL CLEARANCE BETWEEN THE CHANNELIZING DEVICES AT THE RIGHT EDGE OF THE WORK AREA AND THE EDGE OF THE RAMP PAVEMENT IS 9 FEET OR MORE. WHEN THE CLEARANCE IS LESS THAN 9 FEET, THE TRAFFIC CONTROL ON "LANE CLOSURE AT ENTRANCE RAMP: PLAN B" SHOULD BE USED, OR THE RAMP SHOULD BE CLOSED, OR ALLOWING RAMP TRAFFIC TO USE THE BERM SHOULD BE CONSIDERED PROVIDED THE OPERATION IS "SHORT" IN DURATION. WHEN THE RAMP IS CLOSED, APPROPRIATE DETOUR SIGNS SHALL BE PROVIDED.

2. THIRTEEN (13) DRUMS OR BARRICADES SHALL BE USED TO FORM THE LANE TRANSITION TAPER IN ADVANCE OF THE WORK AREA. FIVE (5) CHANNELIZING DEVICES SHALL BE USED TO FORM THE TAPER ON THE SHOULDER. CONES, DRUMS, OR BARRICADES SHALL BE SPACED AT 50 FOOT CENTERS. CONES MAY BE SUBSTITUTED FOR BARRICADES OR DRUMS FOR THE LANE CLOSURES DURING DAYLIGHT HOURS ONLY.

3. RAMP SIGNS SHALL BE DUAL MOUNTED ON MULTILANE RAMPS.

4. THE FLASHING OR SEQUENCING ARROW PANEL SHALL BE IN ACCORDANCE WITH STANDARD CONSTRUCTION DRAWING TC-35.10.

5. THE WORK TRUCK SHOWN AT THE BEGINNING OF THE WORK AREA SHALL BE IN PLACE AND UNOCCUPIED WHENEVER MEN ARE WORKING WITHIN THE WORK AREA. THIS TRUCK SHALL BE MOVED FROM THE PAVEMENT WHENEVER WORKMAN ARE NOT IN THE WORK AREA. OTHER PROTECTIVE DEVICES MAY BE USED IN LIEU OF WORK TRUCK SHOWN WHEN APPROVED BY THE ENGINEER. A TRUCK MOUNTED IMPACT ATTENUATOR MAY BE EMPLOYED.

6. TYPE C STEADY BURNING BARRICADE WARNING LIGHTS SHALL BE ERECTED ON DRUMS OR BARRICADES FOR NIGHT LANE CLOSURES. MAXIMUM SPACING SHALL BE 50' CENTER TO CENTER IN ADVANCE OF THE WORK AREA AND 200' CENTER TO CENTER WITHIN THE LIMITS OF THE WORK AREA.

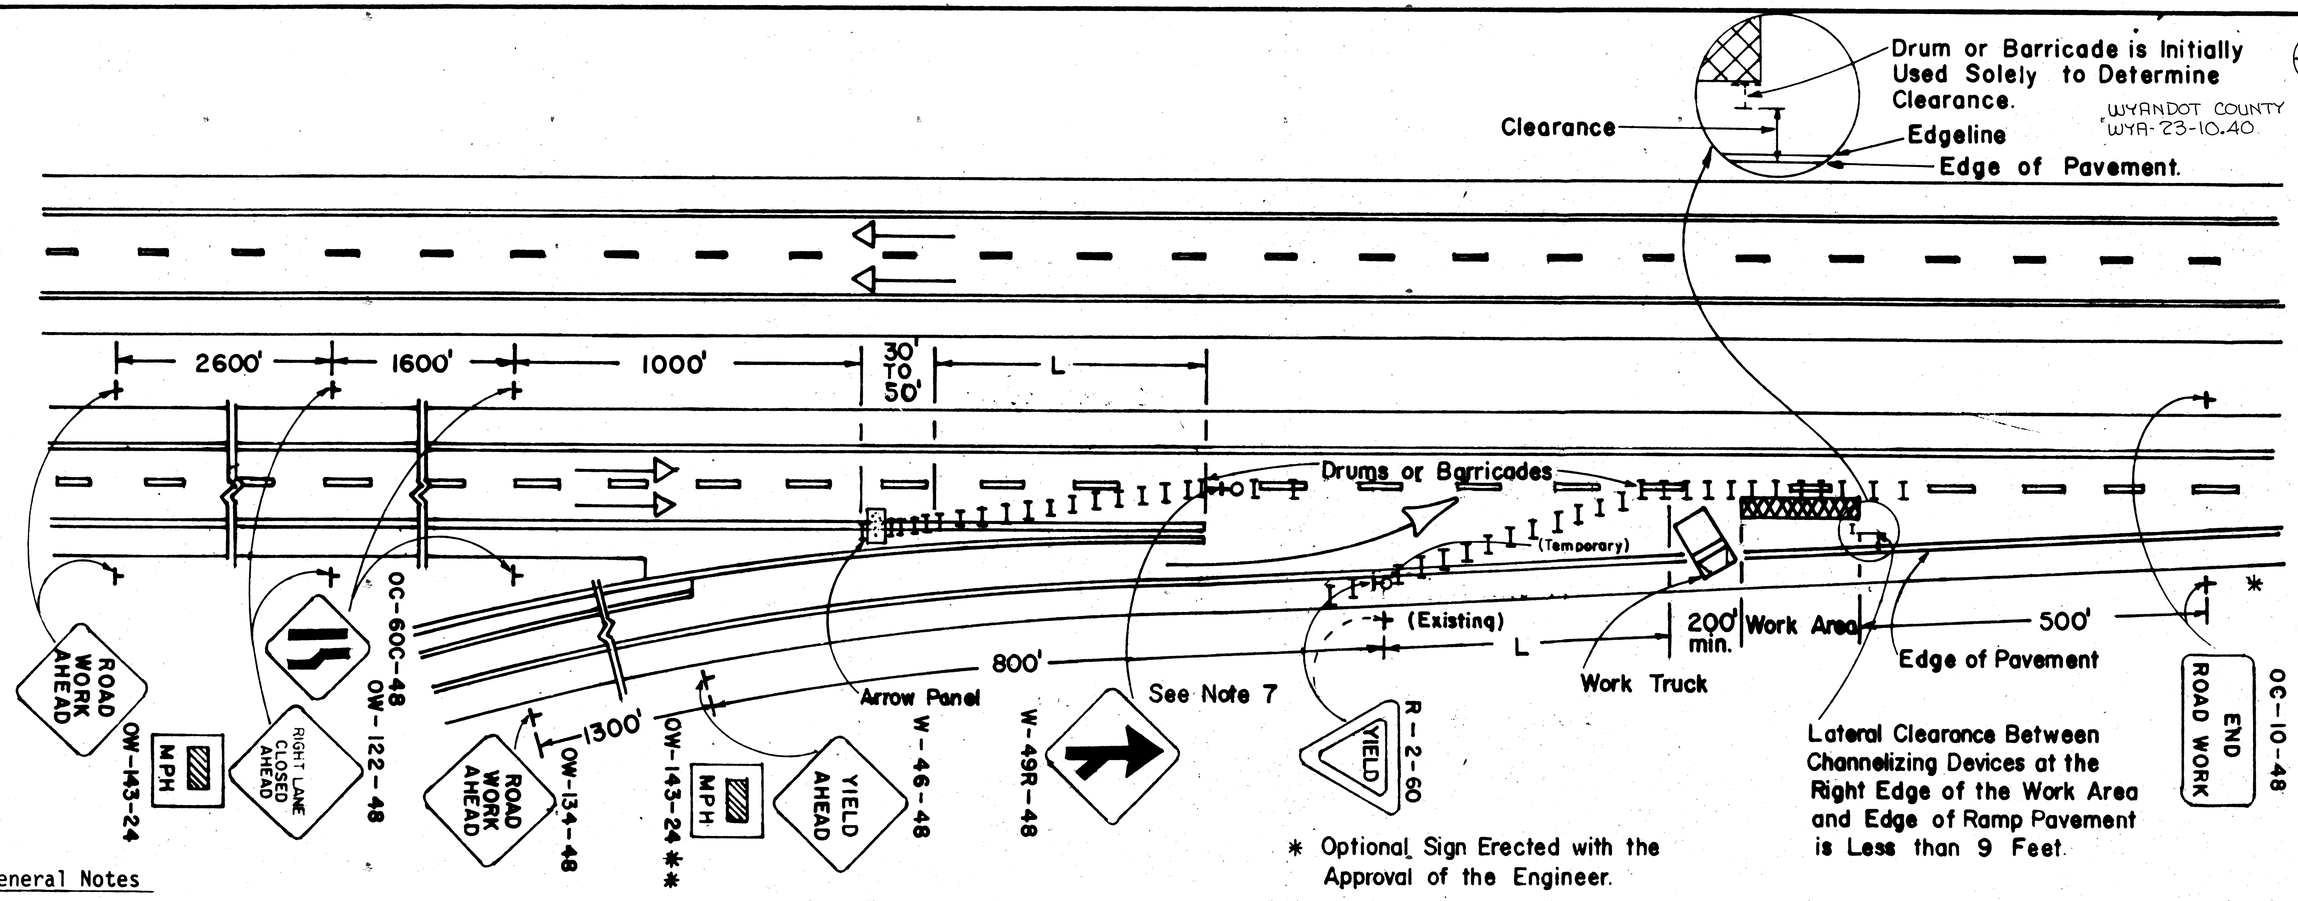
LANE CLOSURE AT ENTRANCE RAMP: PLAN A	DATE 8-3-79

WYANDOT COUNTY
WYA-23-10.40



* Optional Sign Erected with the Approval of the Engineer.

General Notes

1. This work area traffic control application shall be employed when the lateral clearance between channelizing devices at the right edge of the work area and the edge of the ramp pavement is less than 9 feet. When the clearance is more than 9 feet, the traffic control on "Lane Closure at Entrance Ramp: Plan A" should be used, or the ramp should be closed. When the ramp is closed, appropriate detour signs shall be provided.

2. Thirteen (13) drums or barricades shall be used to form the lane transition taper in advance of the work area. Five (5) channelizing devices shall be used to form the taper on the shoulder. Cones, drums, or barricades shall be spaced at 50 foot centers. Cones may be substituted for barricades or drums for the lane closures during daylight hours only.

3. Ramp signs shall be dual mounted on multi-lane ramps. When the ramp is not long enough to allow placement as specified above, the signs may be spaced proportionately within the space available as determined by the Engineer (a 200' minimum spacing must be maintained).

4. The flashing or sequencing arrow panel shall be in accordance with Standard Construction Drawing TC-35.10.

5. The work truck shown at the beginning of the work area shall be in place and unoccupied whenever men are working within the work area. This truck shall be moved from the pavement whenever workmen are not in the work area. Other protective devices may be used in lieu of work truck shown when approved by the Engineer.

6. Type C steady burning barricade warning lights shall be erected on drums or barricades for night lane closures. Maximum spacing shall be 50' center to center in advance of the work area and 200' center to center within the limits of the work area.

7. It may be necessary to move the location of an existing Yield condition. In these cases, the permanent R-2 sign installation shall be covered and the temporary installation shall be mounted upon a drive post which shall be banded to a drum with stainless steel strapping material or other techniques subject to the approval of the Engineer.

8. Taper Formulae:

   $L = S \times W$ for Speeds of 45 or more.
   $L = WS^2/60$ for Speeds 40 or less.

   Where:

   L = Minimum length of taper.
   S = Numerical value of posted speed limit prior to work or 85 percentile speed.
   W = Width of offset.

9. THE SPACINGS BETWEEN CONSTRUCTION AND MAINTENANCE SIGNS SHOWN ON THIS DETAIL MAY REQUIRE ADJUSTMENTS (INCREASES OR DECREASES) TO ASSURE THAT THEY ARE POSITIONED NO CLOSER THAN 200 FEET TO EXISTING SIGNS AS DETERMINED BY THE ENGINEER.
