Thomas and Sean:

I recommend using the 81” SSB where traditional walls were recommended for 114709 and 114909. For 114708, the 81” SSB should be used between SR45 and the Creek located about 1200’ east of SR45. East of the creek, use 81” SSB with an overlapped traditional wall located at the ROW fence. Traditional wall will replace the ROW fence. Stop the west end of the traditional wall before the ROW starts to dip towards the creek. Extend the 81” SSB to the east to ensure a 3:1 length to width of gap overlap with the traditional wall. The status of future noise PI surveys will be determined by D4 and OES will assist D4 with the future noise PI mailers as needed. Thanks.

If you have any questions or concerns, please do not hesitate to contact me by phone or email.
