EROSION CONTROL

ITEMS 601, 660, 667 AND 668 ARE PROVIDED IN THE PLANS FOR EROSION CONTROL. ROCK OF A STABLE NATURE WILL NOT BE REMOVED IN ORDER TO PLACE ANY OF THESE ITEMS, AND TURF OF A STABLE NATURE WILL NOT BE REMOVED IN ORDER TO PLACE 660, 667, OR 668. THE ENGINEER SHALL CHECK AND NON-PERFORM QUANTITIES OR ADJUST LOCATIONS AND QUANTITIES FOR THESE ITEMS WHERE INDICATED BY FIELD CONDITIONS DURING CONSTRUCTION.

UNRECORDED SANITARY CONNECTIONS

ANY UNRECORDED ACTIVE CONNECTION TO A SANITARY SEWER ENCOUNTERED DURING CONSTRUCTION SHALL BE RECONNECTED TO THE EXISTING SEWER AS DIRECTED BY THE ENGINEER.

THE FOLLOWING ESTIMATED QUANTITIES HAVE BEEN INCLUDED IN THE GENERAL SUMMARY FOR WORK NOTED ABOVE:

ITEM 603	6" Conduit, Type C, 706.01, 706.02, 706.08 with 706.11 or 706.12 joints	25 L.F.

NONE OF THE ABOVE MATERIALS SHALL BE ORDERED BY THE CONTRACTOR UNTIL REQUESTED BY THE ENGINEER.

MEDIAN PAVEMENT ON APPROACH SLABS

THE WIDTH AND TYPE OF MEDIAN PAVEMENT ON APPROACH SLABS SHALL BE TRANSITIONED FROM THE STANDARD SECTION USED ON THE APPROACH PAVEMENT TO THE SECTION USED ON THE BRIDGE WITHIN THE LIMITS OF THE APPROACH SLAB.

FARM DRAINS

ALL FARM DRAINS WHICH ARE ENCOUNTERED DURING CONSTRUCTION SHALL BE PROVIDED WITH UNOBSTRUCTED OUTLETS UNDER THE DIRECTION OF THE ENGINEER. EXISTING COLLECTORS WHICH ARE LOCATED BELOW THE ROADWAY DITCH ELEVATIONS AND WHICH CROSS THE ROADWAY SHALL BE REPLACED WITHIN THE RIGHT-OF-WAY LIMITS BY ITEM 603 CONDUIT, TYPE B, ONE COMMERCIAL SIZE LARGER THAN THE EXISTING CONDUIT.

EXISTING COLLECTORS AND ISOLATED FARM DRAINS WHICH ARE ENCOUNTERED ABOVE THE ELEVATION OF THE ROADWAY DITCHES SHALL BE OUTLETTED INTO THE ROADWAY DITCH BY 603 TYPE F CONDUIT. THE OPTIMUM OUTLET ELEVATION SHALL BE, IF POSSIBLE, ONE FOOT ABOVE THE FLOWLINE ELEVATION OF THE DITCH. LATERAL TILE FIELDS WHICH CROSS THE ROADWAY SHALL BE INTERCEPTED BY 603 TYPE E CONDUIT AND CARRIED IN A LONGITUDINAL DIRECTION TO AN ADEQUATE OUTLET OR ROADWAY CROSSING.

THE LOCATION, TYPE, SIZE AND GRADE OF REQUIRED REPLACEMENTS SHALL BE DETERMINED BY THE ENGINEER DURING CONSTRUCTION AND PAYMENT SHALL BE MADE ON FINAL MEASUREMENTS.

THE FOLLOWING ESTIMATED QUANTITIES HAVE BEEN INCLUDED IN THE GENERAL SUMMARY FOR THE WORK NOTED ABOVE.

NECESSARY BENDS OR BRANCHES SHALL BE INCLUDED FOR PAYMENT IN THE PERTINENT CONDUIT ITEM.

NONE OF THE ABOVE MATERIALS SHALL BE ORDERED BY THE CONTRACTOR UNTIL AUTHORIZED BY THE ENGINEER.

ITEM 605 AGGREGATE DRAINS

AGGREGATE DRAINS SHALL BE PLACED AT FIFTY (50) FOOT INTERVALS ON EACH SIDE OF NORMAL, CROWNED SECTIONS AND AT TWENTY-FIVE(25) FOOT INTERVALS ON THE LOW SIDE ONLY OF SUPER-ELEVATED SECTIONS, EXCEPT WHERE ITEM 605 PIPE UNDERDRAINS HAVE BEEN PROVIDED.

AGGREGATE DRAINS ADJACENT TO REINFORCED PORTLAND CEMENT CONCRETE PAVEMENT SHALL BE PLACED AT EACH TRANSVERSE JOINT ON THE OUTSIDE EDGE OF NORMAL SECTIONS AND ON THE LOW SIDE OF SUPERELEVATED SECTIONS.

AN AGGREGATE DRAIN SHALL BE PLACED AT THE LOW POINT OF EACH SAG VERTICAL CURVE.

ELEVATION DATUM

ALL ELEVATIONS ARE BASED ON U.S.G.S. DATUM.

REMOVAL OF TREES AND STUMPS

EARTHWORK ALONG CURVED ALIGNMENT

THE CENTROIDS OF AREAS ON THE CROSS SECTION SHEETS ARE INDICATED BY A VERTICAL LINE. THE LENGTH OF VOLUME ALONG THE CURVE IS COMPUTED BASED ON THE AVERAGE OF ADJACENT CENTROIDS. INDIVIDUAL VOLUMES ALONG CURVED ALIGNMENT ARE COMPUTED BY AN ELECTRONIC COMPUTER, AND THEN TOTALED. THE TOTAL VOLUME OF EACH SECTION IS SHOWN ON THE CROSS SECTION SHEETS.

EXAMPLE

ASSUME A 10° CURVE, RADIUS 572.96 FEET. CENTROID AT STATION 4 + 00 IS FOUND TO BE 35 FEET FROM THE CENTERLINE AND CENTROID AT STATION 4 + 50 IS FOUND TO BE 25 FEET FROM THE CENTERLINE. CORRECT RADIUS BETWEEN CENTROIDS IS THEREFORE 572.96 FEET MINUS (35+25) ÷ 2 OR 542.96 FEET. ALIGNMENT FACTOR IS THEN 542.96 ÷ 572.96 OR 0.94764 WHICH WHEN MULTIPLIED BY 50 FEET GIVES A CORRECTED ARC LENGTH BETWEEN CENTROIDS OF 47.38 FEET.

MAINTENANCE OF TRAFFIC

TEMPORARY PAVEMENT MARKINGS
NOTE B

GENERAL

THE CONTRACTOR SHALL FURNISH, INSTALL, MAINTAIN, AND WHEN NECESSARY, REMOVE TEMPORARY RETROREFLECTIVE PAVEMENT MARKINGS ON EXISTING, RECONSTRUCTED, RESURFACED OR TEMPORARY ROADS WITHIN THE WORK LIMITS, IN ACCORDANCE WITH THE FOLLOWING REQUIREMENTS.

THE MARKINGS SHALL BE MAINTAINED IN GOOD CONDITION DURING THE REQUIRED SERVICE PERIOD TO PROVIDE DAY AND NIGHT VISIBILITY. THE MARKINGS SHALL BE REPAIRED OR REPLACED AS DIRECTED BY THE ENGINEER TO MAINTAIN REQUIRED VISIBILITY AND/OR REFLECTIVITY AT NO ADDITIONAL COST TO THE STATE.

MATERIALS

UNLESS OTHERWISE INDICATED ON THE PLANS, TEMPORARY PAVEMENT MARKINGS MAY BE OF PAINT, PAVEMENT MARKING TAPE OR REMOVABLE PAVEMENT MARKING TAPE (TYPE R TAPE).

A. PAINT

PAINT SHALL COMPLY WITH 708.14 AND SHALL BE APPLIED IN ACCORDANCE WITH 621 EXCEPT AS MODIFIED HEREIN.

B. PAVEMENT MARKING TAPE

FLEXIBLE RETROREFLECTIVE PREFORMED PRESSURE SENSITIVE TAPE SHALL HAVE STRAIGHT EDGES AND BE FREE OF CRACKS. THE TAPE SHALL CONSIST OF PIGMENT AND FILLERS WITH SUFFICIENT BINDER AND PLASTICIZER TO RETAIN GLASS BEADS HAVING A REFRACTIVE INDEX MEETING THE MINIMUM REFLECTIVE INTENSITY STANDARD STATED IN THE MANUFACTURERS INFORMATION. THE TAPE SHALL BE FLEXOLITE "WET REFLECTIVE", 3M "SCOTCHLANE", OR AN APPROVED EQUAL.

THE GLASS BEADS SHALL BE DISTRIBUTED UNIFORMLY THROUGHOUT THE TAPE WITH SUFFICIENT SURFACE BEADS TO PROVIDE OPTIMUM REFLECTORIZATION AT ALL TIMES.

PAVEMENT MARKING TAPE SHALL COMPLY WITH THE COLOR REQUIREMENTS OF 708.14.

THE TAPE SHALL HAVE A PRECOATED ADHESIVE LAYER FOR PAVEMENT APPLICATION WITHOUT THE USE OF HEAT, SOLVENTS OR ADDITIONAL ADHESIVES. THE ADHESIVE SHALL BE SUFFICIENT TO RETAIN COMPLETE MARKINGS ON THE PAVEMENT SURFACE THROUGHOUT THE USEFUL LIFE OF THE MARKINGS.

IN ADDITION TO THE FOREGOING, ALL TEMPERATURE APPLICATION REQUIREMENTS AND OTHER APPLICABLE MANUFACTURERS MATERIAL AND APPLICATION INSTRUCTIONS SHALL BE FOLLOWED.

WHEN APPROVED BY THE ENGINEER THE CONTRACTOR MAY USE REMOVABLE PAVEMENT MARKING TAPE (TYPE R TAPE), IN LIEU OF THAT DESCRIBED ABOVE, TO FACILITATE REMOVAL OF MARKINGS.

C. REMOVABLE PAVEMENT MARKING TAPE (TYPE R TAPE)

THE MARKING MATERIAL SHALL BE A MIXTURE OF POLYMERIC MATERIALS, PIGMENTS, REINFORCING MEDIUM TO FACILITATE REMOVAL, GLASS BEADS THROUGHOUT THE PIGMENTED PORTION, AND A RETROREFLECTIVE LAYER OF GLASS BEADS BONDED TO THE TOP SURFACE.

THE TAPE SHALL BE PRECOATED WITH A PRESSURE SENSITVE ADHESIVE CAPABLE OF TEMPORARILY BONDING TO ASPHALT CONCRETE OR PORTLAND CEMENT CONCRETE PAVEMENT AT AN AMBIENT TEMPERATURE OF NOT LESS THAN 50° F AND RISING, AT A PAVEMENT TEMPERATURE OF NOT LESS THAN 50° F NOR MORE THAN 150° F, WITHOUT THE USE OF HEAT, SOLVENTS, AND ADDITIONAL ADHESIVES OR ACTIVATORS.

MATERIALS SHALL CONFORM TO THE COLOR REQUIREMENTS OF 708.14.

THE TAPE SHALL BE REMOVABLE FROM APSHALT AND PORTLAND CEMENT CONCRETE INTACT OR IN LARGE PIECES AT TEMPERATURES ABOVE 40° F WITHOUT USE OF HEAT, SOLVENTS, GRINDING, OR SANDBLASTING. REMOVAL SHALL NOT RESULT IN DAMAGE TO OR OBJECTIONABLE STAINING OF THE PAVEMENT.

GLASS BEADS SHALL BE PROVIDED IN A PROPER SIZE, QUANTITY AND DISTRIBUTION TO ASSURE OPTIMUM RETROREFLECTIVITY AS THE FILM WEARS. THE FOLLOWING INITIAL AVERAGE REFLECTANCE VALUES AT 86.0 ENTRANCE ANGLE AS MEASURED IN ACCORDANCE WITH THE TESTING PROCEDURES OF FEDERAL TEST METHOD 370 SHALL BE CERTIFIED:

	WHITE	YELLOW
OBSERVATION ANGLE	0.2 0.5	0.2 · 0.5
SPECIFIC LUMINANCE	1770 1270	1310 810

(MCD/FT^2)/FC

THE TAPE SHALL BE 3-M COMPANY'S "STAMARK, DETOUR GRADE (SERIES 57L0, 57IL, 6270, 62IL)" OR AN APPROVED EQUAL.

THE CONTRACTOR SHALL FURNISH TO THE ENGINEER CERTIFICATION THAT THE MATERIAL SUPPLIED MEETS THE PROPERTIES SPECIFIED HEREIN.

LAYOUT

THE TEMPORARY MARKINGS SHALL BE ACCURATELY LAID OUT IN CONFORMANCE WITH 621.051 AND SHALL BE LOCATED IN A TRUE LINE ON THE CENTER LINE, LANE LINE, EDGE LINE, OR CHANNELIZING LINE WHERE PERMANENT MARKINGS WOULD LIE UNLESS OTHERWISE SPECIFIED IN THE PLANS.

PLACEMENT

TEMPORARY MARKINGS SHALL BE PLACED IN ACCORDANCE WITH LAYOUTS ON SHEETS 22-27 AND THE FOLLOWING REQUIREMENTS, UNLESS OTHERWISE SPECIFIED IN THE PLANS.

TEMPORARY MARKINGS SHALL BE COMPLETE AND IN PLACE ON ALL PAVEMENT PRIOR TO EXPOSING IT TO TRAFFIC. WHEN TEMPORARY MARKINGS ARE NO LONGER NEEDED, THEY SHALL BE REMOVED BY THE CONTRACTOR IN ACCORDANCE WITH 621.134 AND NECESSARY PAVEMENT MARKINGS INSTALLED BEFORE THE FLOW OF TRAFFIC IS CHANGED TO THE NEXT PHASE OR RETURNED TO ITS NORMAL CHANNEL.

WHERE PERMANENT PAVEMENT MARKINGS ARE CALLED FOR IN THE PLANS, THE CONTRACTOR SHALL FURNISH AND PLACE THE PERMANENT MARKINGS WITHIN 30 CALENDAR DAYS FOLLOWING COMPLETION OF ALL SURFACE COURSES IN A SINGLE ROADWAY OR PRIOR TO THE END OF THE CONSTRUCTION SEASON, WHICHEVER COMES FIRST. PERMANENT MARKINGS SHALL NOT BE PLACED OVER ANY TAPE MARKINGS.

A. CLASS I MARKINGS

CLASS I MARKINGS SHALL BE AS DEFINED IN 621, EXCEPT AS FOLLOWS:
1) LANE LINES SHALL BE 4-INCHES IN WIDTH.
2) TRANSVERSE LINES SHALL BE 8-INCHES IN WIDTH.
3) STOP LINES SHALL BE 12-INCHES IN WIDTH.
4) CROSS WALK LINES SHALL BE 8-INCHES IN WIDTH.

GORE MARKINGS SHALL CONSIST OF TWO CHANNELIZING LINES PLACED AT THE THEORETICAL OR TEMPORARY GORE OF RAMPS AND DIVERGING OR CONVERGING ROADWAYS.

THE PAINT APPLICATION RATE SHALL BE NOT LESS THAN 16 GALLONS PER MILE FOR SOLID 4-INCH LINES, 24 GALLONS PER MILE FOR SOLID 6-INCH LINES, 48 GALLONS PER MILE FOR SOLID 12-INCH LINES, AND 4 GALLONS PER MILE FOR 4-INCH DASHED LINES.

CENTER LINES SHALL CONSIST OF SINGLE, YELLOW 12-INCH BY 4-INCH DASHES SPACED AT A MAXIMUM OF 40-FOOT INTERVALS.

LANE LINES SHALL CONSIST OF WHITE 12-INCH BY 4-INCH DASHES SPACED AT A MAXIMUM OF 40-FOOT INTERVALS.

CHANNELIZING LINES SHALL CONSIST OF WHITE 12-INCH BY 4-INCH DASHES SPACED AT A MAXIMUM OF 20-FOOT INTERVALS.

GORE MARKINGS SHALL BE TWO CONTINUOUS, WHITE 50-FOOT BY 4-INCH LINES PLACED AT THE THEORETICAL GORE OF AN EXIT RAMP OR DIVERGING ROADWAYS.

THE PAINT APPLICATION RATE SHALL BE NOT LESS THAN 16 GALLONS PER MILE FOR GORE MARKINGS, 0.8 GALLONS PER MILE FOR CHANNELIZING LINE, AND 0.4 GALLONS PER MILE FOR LANE LINE AND CENTER LINE.

CONFLICTING MARKINGS

THE CONTRACTOR SHALL, PRIOR TO PLACING TEMPORARY MARKINGS, REMOVE ALL EXISTING CONFLICTING MARKINGS VISIBLE TO THE TRAVELING PUBLIC DURING DAYLIGHT OR NIGHTTIME HOURS IN ACCORDANCE WITH 621.134. THE COST FOR REMOVAL OF CONFLICTING MARKINGS SHALL BE INCIDENTAL TO THE VARIOUS PAY ITEMS.

METHOD OF MEASUREMENT

TEMPORARY PAVEMENT MARKINGS WILL BE MEASURED COMPLETE IN PLACE, BY CLASS AND MATERIAL, IN THE UNITS DESIGNATED. DASHED LINE QUANTITIES WILL BE THE LENGTH OF THE COMPLETED STRIPE, INCLUDING GAPS, INTERSECTIONS, AND OTHER SECTIONS OF PAVEMENT NOT NORMALLY MARKED, IN ACCORDANCE WITH 621.15.

TEMPORARY PAVEMENT MARKINGS WILL INCLUDE THE LAYOUT, APPLICATION AND REMOVAL OF THE MARKINGS, WHEN REQUIRED.

BASIS OF PAYMENT

PAYMENT FOR ACCEPTED QUANTITIES COMPLETE IN PLACE WILL BE MADE AT THE CONTRACT UNIT PRICE. PAYMENT SHALL BE FULL COMPENSATION FOR ALL MATERIALS, LABOR, INCIDENTALS AND EQUIPMENT FOR PLACEMENT, MAINTENANCE AND NECESSARY REMOVAL OF THE MARKINGS.

THE BARRELS SHALL BE AS SUPPLIED BY FIBCO, INC., ONE BOSTON PLACE, BOSTON, MASS. (FITCH BARRELS) OR ENERGY ABSORPTION SYSTEMS, INC., ONE IBM PLAZA, CHICAGO, ILLINOIS (ENERGITE BARRELS).

THE AXIS OF ORIENTATION OF BARRELS IS TO BE FROM CENTER OF OBSTACLE TO BEGINNING OF SPLIT, UNLESS OTHERWISE NOTED ON THE PLANS. THE CONTRACTOR SHALL, PRIOR TO FILLING THE BARRELS, OUTLINE IN YELLOW SPRAY-TYPE PAINT THE LOCATION OF EACH MODULE AND PAINT THE RESPECTIVE SAND WEIGHTS (MINIMUM HEIGHT OF NUMBERS – 6") INSIDE SAID OUTLINE AS INDICATED ON PLAN SHEETS. THE CONTRACTOR SHALL DRILL HOLES IN THE RIM AND BARREL AT FOUR EQUI-DISTANT POINTS AND POP-RIVET THE TOP TO THE BARREL.

THE SAND PLACED IN THE BARRELS SHALL BE APPROVED BY THE ENGINEER BEFORE USE. THE CONTRACTOR SHALL USE WASHED CONCRETE SAND, SPEC. 703.02 (GRADATION ONLY) WITH A WATER CONTENT BY WEIGHT OF TWO (2) % OR LESS. SAND PLACED WITHIN THE BARRELS SHALL HAVE A DENSITY BETWEEN 90–100 LBS. PER CU.FT.

THE ACCEPTED QUANTITY OF IMPACT ATTENUATORS WILL BE PAID FOR AT THE CONTRACT UNIT PRICE PER EACH MODULE ARRAY WHICH PRICE SHALL BE FULL COMPENSATION FOR FURNISHING AND PLACING ALL MATERIALS IN ACCORDANCE WITH THE PLAN DETAIL SHEETS, INCLUDING ALL LABOR, MATERIALS, AND EQUIPMENT NECESSARY TO CONSTRUCT A COMPLETE AND FUNCTIONAL SAND BARREL IMPACT ATTENUATOR.

AT LOCATIONS WHERE THE ENGINEER DETERMINES THE PAVEMENT SLOPE AND/OR VIBRATIONS FROM TRUCKS MAY CAUSE RELOCATION OF BARRELS, THE CONTRACTOR SHALL INSTALL FIBCO MODULE LOCATING HALF RINGS OR APPROVED EQUAL, TO PREVENT MOVEMENT OF THE BARRELS. AN ESTIMATED QUANTITY OF (12) TWELVE ATTENUATOR LOCATING HALF RINGS ARE PROVIDED IN THE GENERAL SUMMARY.

TO DETER FREEZING OF SAND IN THE BARRELS, A SALT BRINE SOLUTION SHALL BE ADDED UNIFORMLY TO THE SAND FOLLOWING EACH LAYER OF SAND OF A MAXIMUM HEIGHT OF 6.5 INCHES. THE SOLUTION SHALL CONTAIN ONE POUND OF SALT (97% PURE NaCl) FOR EVERY 5 POUNDS OF WATER. EQUAL AMOUNT OF SAID SOLUTION SHALL BE ADDED TO EACH LAYER OF SAND PLACED IN THE BARRELS. THE TOTAL AMOUNT OF SALT BRINE SOLUTION ADDED TO EACH BARREL SHALL BE 5% OF THE SAND WEIGHT PER RESPECTIVE BARREL. THE SALT BRINE SOLUTION SHALL BE UNIFORMLY SPRINKLED OR SPRAYED OVER THE SURFACE OF EACH LAYER OF SAND.

AN ALTERNATIVE METHOD WOULD BE TO PRE-MIX, WITH THE SAME PROPORTIONS AS STATED ABOVE, THE SAND AND THE SALT BRINE SOLUTION BY AGITATION OR OTHER METHODS WHICH WOULD ACHIEVE A THOROUGH BLEND OF MATERIALS.

SPIRAL REINFORCING BARS: The "Length" shown in the steel list for spiral bars is the distance from the top of the footing to the bottom of the pier cap. The "Number of Turns" shown is the "Length" divided by the "Pitch", plus three turns (total number of closed coils), expressed as the nearest whole number with ½ closed coils provided at the ends of each spiral unit. Four steel channel, tee or angle spacers weighing approximately 0.80 pounds per lineal foot of spacers shall be provided for each spiral unit. They shall be equally spaced along the periphery of the coil. The number of pounds of these spacers, based on 0.80 pounds per lineal foot, will be paid for as reinforcing steel and is included in the tabulated quantity of spiral bars.

REINFORCING STEEL SAMPLES: Refer to CMS Sections 106.03, 700, 709.01 through 709.05 and 709.08. Sufficient additional reinforcing steel shall be provided for sampling. Random samples shall be replaced in the structures by the additional steel, spliced in accordance with 509.08.

GENERAL NOTES

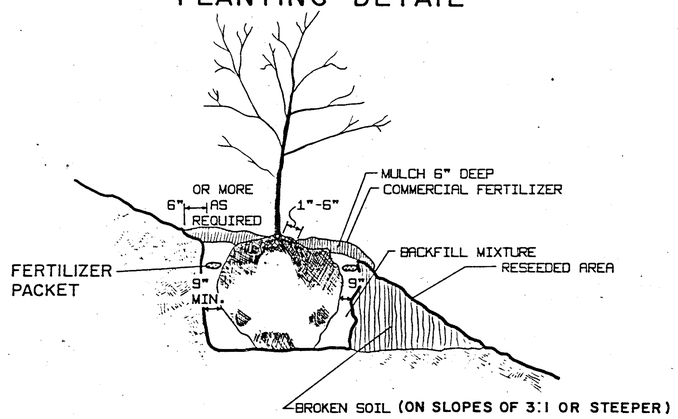
PLANTING DETAIL



THE TOP OF THE ROOT BALL SHALL BE 2 INCH ABOVE THE NORMAL GROUND LINE IN AVERAGE SOILS, 3 INCHES IN HEAVY CLAY SOILS AND 6 INCHES WHERE IMPERMEABILITY IS ENCOUNTERED.

ON SLOPES WHERE HEAVY CLAY AND IMPERMEABLE SOILS ARE PRESENT THE DOWN HILL SIDE OF THE POCKET HOLE SHALL BE BROKEN OR LOOSENED AND RETURNED TO ITS NATURAL GRADE TO PROVIDE DRAINAGE FOR THE HOLE.

PLANTING HOLE AND BED PREPARATION

AFTER THE LAYOUT IS APPROVED BY THE ENGINEER, SHRUB BEDS SHALL BE CULTIVATED TO A MINIMUM DEPTH OF SIX (6) INCHES BY A PLOW, HARROW OR DISC, OR OTHER METHOD APPROVED BY THE ENGINEER. THE CULTIVATION SHALL TAKE PLACE AS FAR IN ADVANCE OF THE PLANTING OPERATION AS POSSIBLE. WHERE SHRUBS ARE SHOWN, INDIVIDUAL HOLES SHALL BE DUG ON CENTERS AS SHOWN ON THE PLANS. THESE HOLES SHALL ALLOW FOR A MINIMUM OF NINE (9) INCHES OF BACKFILL MIXTURE AROUND THE SIDES OF THE BALLS. THE BOTTOM OF THE HOLE SHALL BE NO DEEPER THAN THE BALL TO BE PLANTED. THE MATERIAL REMOVED FROM THE HOLES SHALL BE TAKEN FROM THE PROJECT IF IT IS FOUND TO BE UNACCEPTABLE FOR USE AS BACKFILL AS DETERMINED BY THE ENGINEER. THE PLANT SHALL THEN BE SET AND THE HOLE FILLED WITH BACKFILL MIXTURE, AND THE PLANTING OPERATION PERFORMED AS SPECIFIED IN ITEMS 662.17 AND 662.18. ALL EXCESS DIRT SHALL BE REMOVED FROM THE SITE.

EXISTING TREES AND SHRUBS SHALL TAKE PRIORITY OVER PROPOSED PLANTINGS. THE LOCATIONS OF THE PROPOSED TREES AND SHRUBS ARE APPROXIMATE AND MAY BE REARRANGED AT THE DIRECTION OF THE ENGINEER WHEN OBSTRUCTIONS ARE ENCOUNTERED.

IF AN AUGER IS USED IN DIGGING POCKET HOLES AND POLISHED (SHINY) SIDES OCCUR IN CLAY OR HEAVY SOILS, THE USE OF SUCH AN AUGER SHALL BE DISCONTINUED AND THE HOLES SHALL BE DUG WITH A BACKHOE OR ANOTHER APPROVED METHOD.

BACKFILL NO. 1 - THE BACKFILL MIXTURE USED TO FILL POCKET HOLES IN LIGHT AND MEDIUM SOILS (SAND & AVERAGE) SHALL CONSIST BY VOLUME OF: 2 PARTS *SOIL CONDITIONER, 2 PARTS COMPRESSED SPHAGNUM PEAT OR 3 PARTS SEDGE PEAT, AND 2 PARTS APPROVED TOPSOIL.

BACKFILL NO. 2 - THE BACKFILL MIXTURE USED TO FILL POCKET HOLES IN HEAVY SOILS (CLAY & SHALE) SHALL CONSIST BY VOLUME OF : 1 PART *SOIL CONDITIONER, 1 PART COMPRESSED SPHAGNUM PEAT OR 2 PARTS SEDGE PEAT, AND 2 PARTS APPROVED TOPSOIL.

INCORPORATE THOROUGHLY INTO THE BACKFILL MIXTURES 5 LBS. OF COMMERCIAL FERTILIZER (0-20-20) PER CUBIC YARD. THE ENGINEER, AFTER CONSULTATION WITH THE LANDSCAPE ARCHITECT, SHALL DETERMINE THE LOCATIONS WHERE THE BACKFILL MIXTURES SHALL BE USED.

SCHEDULING

ALL DIGGING AND PLANTING OF DECIDUOUS PLANTS SHALL BE DONE AFTER OCTOBER 1, AND BEFORE JUNE 1. EVERGREENS SHALL BE DUG AND PLANTED AFTER MARCH 15, AND BEFORE JUNE 1.

ITEMS 662 & 663

ALL TREES AND SHRUBS SHALL BE SPECIMEN (NO. 1 GRADE) PLANTS WITH GROWTH AND BRANCHING HABIT TYPICAL OF THE SPECIES SPECIFIED. NO PARK GRADE (NO. 2 OR 3 GRADE) PLANTS WILL BE ACCEPTED.

FERTILIZER

FOUR OUNCE (8 YEAR) COMMERCIAL FERTILIZER PACKETS USED IN PLANTING OPERATION SHALL BE DELIVERED DRY IN ORIGINAL, UNOPENED CONTAINERS. FERTILIZER ANALYSIS SHALL BE 16% NITROGEN, 8% PHOSPHORIC ACID AND 16% POTASH. FERTILIZER SHALL BE OF A SLOW RELEASE TYPE IN A POLYETHYLENE PERFORATED PACKET WITH MICROPORE HOLES.

THE PACKETS SHALL BE PLACED 6 TO 8 INCHES DEEP AND EVENLY SPACED AROUND THE PERIMETER OF THE PLANTING HOLE, ADJACENT TO THE BALL OR ROOT MASS BUT NOT IN DIRECT CONTACT WITH THE ROOTS. THE PACKETS SHALL NOT BE CUT, RIPPED OR DAMAGED.

EACH SHRUB OR TREE SHALL BE FERTILIZED ACCORDING TO THE FOLLOWING SCHEDULE:

SHRUBS 1'-2'	2 PACKETS
SHRUBS 2'-3'	2 PACKETS
SHRUBS 3'-4'	3 PACKETS
TREES 5'-6'	3 PACKETS
TREES 6'-8'	4 PACKETS
TREES 1½"-2" CAL.	2 PACKETS
TREES 2'-2½" CAL.	3 PACKETS
TREES 2½-3" CAL.	4 PACKETS
TREES 3"-3½" CAL.	5 PACKETS

IF IT BECOMES NECESSARY TO REMOVE AND REPLACE MISSING, DEAD OR UNHEALTHY PLANTS, ALL OLD PACKETS SHALL BE REPLACED WITH NEW PACKETS.

THE FOUR OUNCE 16-8-16 FERTILIZER PACKETS SHALL BE DESIGNATED BY THE MANUFACTURER TO BE EFFECTIVE FOR EIGHT YEARS. PACKETS SUCH AS "EEESY GROW", "THE UNIQUE FEEDER" OR AN APPROVED EQUAL SHALL BE USED.

ITEM 661.21 WATERING

WATER SHALL BE FURNISHED BY THE CONTRACTOR AND ALL PLANT MATERIAL SHALL BE WATERED THOROUGHLY AT THE TIME OF PLANTING REGARDLESS OF AMPLE MOISTURE CONTENT OF THE SURROUNDING SOIL. SUSPENSION OF WATERING OPERATIONS BECAUSE OF RAINFALL WILL BE DETERMINED BY THE ENGINEER IN CONSULTATION WITH THE LANDSCAPE ARCHITECT. AN AVERAGE OF ONE INCH OF RAINFALL PER WEEK SHALL BE CONSIDERED ADEQUATE. DETERMINATION OF RAINFALL SHALL BE BASED UPON THE USE OF A RAIN GAUGE APPROVED BY THE PROJECT ENGINEER.

MULCH

MULCH SHALL BE AS PER ITEM 661.04 WITH THE FOLLOWING EXCEPTIONS: WOOD SHAVINGS OR PEAT MOSS OR CORN COBS SHALL NOT BE USED AS A TOP MULCH. WOOD CHIPS SHALL BE AGED (STOCKPILED) AT LEAST 6 MONTHS PRIOR TO PLACEMENT AROUND PLANTS. MULCH SHALL BE SIX INCHES LOOSE MEASUREMENT. AFTER MULCHING, COMMERCIAL FERTILIZER (12-12-12) SHALL BE APPLIED AS SPECIFIED IN ITEM 662.18.

PRUNING

ALL PLANTS SHALL BE PRUNED WITHIN SEVEN DAYS AFTER PLANTING. THE PRUNING SHALL BE DONE ACCORDING TO SELECTED TYPICAL PLANTS OF EACH SPECIES PRUNED AND USED AS A SAMPLE AS DIRECTED BY THE ENGINEER.

ANY CANDLE GROWTH ON NEEDLE EVERGREENS WHICH EXCEED 3 INCHES AT PLANTING TIME SHALL BE CUT BACK TO THAT LENGTH IMMEDIATELY.

STORAGE AREAS

THE CONTRACTOR MAY STORE MATERIALS AND EQUIPMENT 30 FEET FROM PAVEMENT, BEHIND GUARDRAIL AND WITHIN OR ADJACENT TO THE PROJECT LIMITS BY OBTAINING OFFICAL PERMISSION OF THE ENGINEER. NO PEDESTRIAN OF VEHICULAR TRAFFIC MAY BE IMPEDED NOR HAZARDOUS CONDITION CREATED AS A RESULT OF SUCH STORAGE.

THE STORAGE OF ALL DUG PLANTS SHALL CONFORM TO 661.14 WHETHER WITHIN THE PROJECT LIMITS, ADJACENT THERETO, OR AT SOME OTHER LOCATION. THESE AREAS SHALL BE DESIGNATED PRIOR TO ACTUAL PLANT STORAGE AND SHALL BE OPEN TO INSPECTION UPON REQUEST OF THE ENGINEER.

STAKING MATERIALS

ALL TREES SHALL BE STAKED AS SHOWN IN THE STANDARD DRAWING LA-2. STAKING OF SMALL ORNAMENTAL TREES SHALL BE SIMILAR TO THAT OF EVERGREENS. ALL DECIDUOUS TREE TRUNKS ARE TO BE TREATED WITH LINDANE SPRAY BEFORE WRAPPING.

PLANTING PERIOD OF ESTABLISHMENT

BEFORE FINAL INSPECTION, ALL PLANTINGS SHALL BE IN PLACE AND UNDER THE CARE OF THE CONTRACTOR FOR A PERIOD OF ESTABLISHMENT. THIS PERIOD SHALL BEGIN IMMEDIATELY UPON COMPLETION OF THE PLANTING OPERATION FOR ANY PLANT OR SPECIES GROUP AND CONTINUE UNTIL OCTOBER 1. IN NO CASE SHALL IT BE LESS THAN ONE GROWING SEASON, JUNE 1 TO OCTOBER 1.

DURING THIS PERIOD OF ESTABLISHMENT, IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO FOLLOW SUCH HORTICULTURAL PRACTICES AS REQUIRED TO ASSURE THE VIGOR AND GROWTH OF THE TRANSPLANTED MATERIAL. THIS CARE SHALL INCLUDE WATERING, REMULCHING, RESTAKING, GUYING AND CULTIVATING. THERE SHALL BE A MINIMUM OF TWO WEEDING AND MOWING (BED EDGES, AROUND TREES AND GUY STAKES) PROGRAMS OF SUCH INTENSITY AS TO COMPLETELY RID THE PLANTED AND MULCHED AREAS OF WEEDS AND GRASSES. THE FIRST PROGRAM SHALL BEGIN ON OR ABOUT JUNE 15 AND THE OTHER APPROXIMATELY 8 WEEKS LATER.

EACH PLANT SHALL HAVE SUFFICIENT WATER TO KEEP IT IN A HEALTHY, GROWING CONDITION. IF LOCAL WEATHER CONDITIONS WARRANT, THE ENGINEER MAY REQUIRE WEEKLY WATERING. WHEN WATERING IS REQUIRED, A SCHEDULE FOR WATERING EACH PLANT SHALL BE SUPPLIED TO AND APPROVED BY THE ENGINEER. THE WATER SHALL BE APPLIED IN SUCH A MANNER AS TO SATURATE THE ROOT AND MULCHED AREA OF EACH PLANT WITHOUT CAUSING RUNOFF (SEE WATERING TABLE). IN CASE OF FALL PLANTINGS, THESE WATERINGS SHALL CONTINUE UNTIL SOIL FREEZE-UP AND RECOMMENCE AFTER THE SPRING THAW UNLESS OTHERWISE DIRECTED.

ON OR ABOUT SEPTEMBER 15, THE ENGINEER SHALL INSPECT THE PLANTING AND SUPPLY THE CONTRACTOR WITH A LISTING OF THOSE PLANTS HAVING DIED, DIED BACK BEYOND NORMAL PRUNING LINES OR ARE MISSING FROM THE PLANTING. THE CONTRACTOR SHALL MAKE THE REPLANTING AS REQUIRED AND IN ACCORDANCE WITH THE SPECIFICATIONS FOR THE ORIGINAL MATERIAL. THESE REPLACEMENTS ARE NOT SUBJECT TO THE PERIOD OF ESTABLISHMENT, HOWEVER, PLANTS PLANTED INITIALLY IN THE FALL WHICH HAVE DIED BEFORE THE SPRING PLANTING SEASON SHALL BE REPLACED IMMEDIATELY AND ARE SUBJECT TO THE ESTABLISHMENT PERIOD.

AFTER REPLACEMENTS HAVE BEEN PLANTED, THE FINAL INSPECTION SHALL BE MADE AND THE ACTUAL COUNT OF LIVE PLANTS OF EACH VARIETY AND SPECIES LISTED FOR PAYMENT.

WATERING TABLE

SHRUBS 1'-2' SIZE	2 GALLON PER PLANT
SHRUBS 2'-3' SIZE	4 GALLONS PER PLANT
SHRUBS 4'-5' SIZE	7 GALLONS PER PLANT

1. General

The Power Supplying Agency, designated Owner for this portion of the project is:

City of Columbus Ohio
Division of Electricity
50 W. Gay St.
Columbus Ohio, 43215

All construction work shall be done in a thorough and workmanlike manner in accordance with the Plans, Specifications, and Construction Drawings. The 1981 Edition of the National Electrical Safety Code shall be followed except where local regulations are more stringent, in which case, local regulation shall govern.

2. Drawings and Maps.

The Vicinity Map showing the general route of the transmission line or lines, and showing sections of the line covered by each Plan and Profile sheet is listed separately hereinafter and is part of these Plans and Specifications. The Construction Drawings, including the Plan and Profile and structure lists, showing the type of construction to be used where indicated on the Plan and Profile, also are listed separately hereinafter and are part of these Plans and Specifications.

3. Locations of Structures.

Structure, guys, etc., shall be placed in locations and staked by the Contractor as shown on the Plan and Profile sheets and structure lists. Structures, guys, etc., shall not be erected in any other location without prior approval of the Owner. Angle poles shall be offset appropriately for the insulator used.

4. Wood Poles.

In distributing poles, extra heavy, choice, close-grained poles shall be reserved for angles, crossings, and dead ends.

Also see Note No. 36, Timber Products.

GENERAL NOTES

The minimum setting depths for poles shall be as follows

Pole length (feet)	Setting depth (feet)
35	6.0
40	6.0
45	6.5
50	7.0
55	7.5
60	8.0
65	8.5
70	9.0
75	9.5
80	10.0
85	10.5
90	11.0
95	11.0
100	11.0

Two or three pole structures located on sloping ground shall have the pole setting depth increased as required to level the crossarm.

Pole holes shall be approximately 8 inches larger than the butt diameter of the pole, and shall be at least as large at the bottom as at the top.

All poles shall be set in alignment, except on line angles, and plumb. At line angles, where suspension construction is used, poles shall be offset on the bi-sector of the angle so that conductors will hang directly over the point of intersection or in line with the tangent in both directions. All poles shall be plumb after conductors are strung.

In backfilling, holes shall be thoroughly tamped with a power tamper the full depth. Earth shall be banked up around each pole. After completion of the job, holes shall be inspected and any settlement refilled.

Where new gains or holes are required in fir, pine, and full-length treated cedar poles, the gains shall be painted with preservative compound and the holes treated with preservative compound.

The tops of poles shall not be cut except under very exceptional conditions and upon approval of the Engineer. If cutting is deemed necessary, the pole top shall be covered with a mastic type cap. Under no circumstances shall the butt of any pole be cut.

All unused holes in poles shall be plugged prior to erection, using treated wood dowel pins. For holes in used poles where the hole has been enlarged, the hole will be treated with preservative compound.

5. Bolts.

Pole through bolts must be of proper length. (Lengths shown on drawings are for maximum conditions). Through bolts, when installed in the structure shall extend at least 1/2 inch and not more than 2 1/2 inches beyond the nuts. Engineer to modify lengths to suit special requirements.

6. Guys and Anchors.

Guys shall be installed in locations specified by the *plan.* Points of attachment to poles shall be as shown on construction drawings. Guys shall be installed before conductors or overhead ground wires are strung.

Holes for anchors shall be dug in locations specified *by the plan and* staked by the Contractor. Anchor rods shall be in line with the strain and so installed that approximately 8 inches of the rod shall remain out of the ground. Under no circumstances shall the eye of the rod be covered. Holes shall be backfilled and tamped in the same manner as for pole holes. The setting of each anchor as regards depth and position shall be inspected by the Engineer and his approval given in writing before the anchor hole is backfilled.

7. Insulators.

Care shall be exercised in handling and erecting insulators and in assembling suspension units to insure that all cotter keys are in place.

8. Conductors and Overhead Ground Wires.

Conductors may be strung by either conventional or tension stringing method as specified by the *Owner.*

Care shall be exercised to avoid kinking, twisting or abrading the conductor or overhead ground wire in any manner. Conductors or overhead ground wires shall not be tramped on, run over by vehicles, or dragged over sharp rocks. The wire on each reel shall be inspected for cuts, kinks, or other injuries. Injured portions or crooked or imperfect splices in either the conductor or overhead ground wire shall be cut out and the wire respliced.

Conductors and overhead ground wires shall be pulled over suitable rollers or stringing blocks properly mounted on the pole or crossarm, to prevent binding while stringing.

Installation of conductors and accessories shall be done in accordance with manufacturer's recommendations.

With pin-type insulators the conductors shall be tied in the top groove of the insulator on tangent poles and on the side of the insulator away from the strain at angles. Pin-type insulators shall be tight on the pins and on tangent construction the top groove must be in line with the conductor after tying in.

There shall not be more than one splice per conductor in any span, and no splice shall be located within 10 feet of the conductor support.

Utmost care shall be exercised in installing parallel groove clamps. The contact surface of the clamp and the wire shall be clean and bright. A steel brush shall be the principal cleaning medium. Bolts shall be brought down hard, but the threads must not be overstressed. These same precautions for cleaning shall apply to the conductor before splicing.

Conductors and overhead ground wires shall be sagged in accordance with sag and tension charts or tables *shown on sheet 225.* The sag of all conductors after stringing shall be in accordance with the Conductor Manufacturer's recommendations, except that a maximum increase of 3 inches of the specified sag in any span will be acceptable: Provided, however, that required clearances are obtained; under no circumstances will a decrease in the specified sag be allowed. Sagging by sighting between targets is recommended.

The air temperature at the time and place of stringing shall be determined by a certified etched-glass thermometer. The temperature at which the conductor is sagged in and the spans in which sags are measured shall be recorded and the information given to the Engineer.

Tension Stringing - Conductors may be strung by controlled-tension method using neoprene-lined (or approved equal) double bull-wheel type tension stringing equipment. The equipment shall have groove sizes that will in no way damage the conductor. It shall be of a type capable of maintaining preset tensions and pulling speed. Sufficient continuous tension shall be maintained to keep conductors clear of ground or obstructions that could damage conductor

GENERAL NOTES

FRANKLIN COUNTY
FRA-104-10.57

or that could be damaged by conductor. Sheaves shall be designed and used so that the pulling line does not damage the sheaves or deposit foreign matter in the liner which may damage the conductor or cause foreign matter to be deposited on the conductor.

The maximum pulling tensions shall not exceed 110% final sag tension. The cable pullers, tensioners and pulling machines shall be located preferrably as near the midspan as possible, but in no case shall the slope of the conductor between the machine and the stringing block at the first structure be steeper then three horizontal to one vertical. Complete manufacturer's data on tension equipment should be furnished to the *Owner* for approval prior to beginning of work. The length of conductor sagged in one operation shall be limited to the length that can be sagged satisfactorily as approved by the *Owner*.

9. Clearing Right-of-Way and Danger Trees.

In preparing the right-of-way, every precaution should be taken to protect the environment. Only such vegetation should be removed as is necessary to permit construction as well as operation and maintenance of the line. Clearing activities should be undertaken in such a manner as to produce a minimum of soil disturbance and silting of streams. The disposal of trees and brush shall meet appropriate environmental requirements. ~~Dead trees within the right-of-way which would strike the line in falling shall be removed. Leaning trees within the right-of-way which would strike the line in falling and which should require topping if not removed may be removed or topped at the option of the Contractor.~~

10. Pole Grounding Conductor Protection.

Protect all pole grounding conductors with 8 foot tall, molded plastic or wood guards, with at least 5 retaining staples.

11. Guy Grounding.

Ground all guys with suitable jumpers and clamps to pole grounding conductor, unless guys are insulated.

12. Reserved.

13. Guy Guards.

Protect all guys at ground end with guy guards or markers. Guards shall be substantial, conspicious yellow, and not less than 8 feet long.

14. Field Framing.

Field framing permitted, treat all drilled holes as directed elsewhere in these specifications.

15. Guy Strand.

Guy strand shall be class A galvanized, specification or utility grade (Western Union & A.T.T. spec.), 3/8" (three-eights inch), with minimum strength of 11,500 pounds, 7 strand. This specification shall prevail over all other strength specifications for lesser strength than 11,500 pounds found elsewhere in these specifications. Adjust all guying hardware dimensions where required to accept 3/8" diameter.

25. Units of Construction.

These plans and specifications incorporate by reference the following United States of America, U.S. Department of Agriculture, Rural Electrification Administration (REA) documents:

(a) REA Bulletin 43-5 dated July 1977 (with amendments and revisions thereto), entitled: "List of Materials, Acceptable for use on Systems of REA Electrification Borrowers."

These documents are available for purchase at a nominal price by Contractor or bidders from:

(a) Superintendent of Documents
U.S. Government Printing Office
Washington D.C. 20402

(b) U.S. Public Documents Distribution Center
Pueblo, Colorado 81009.

Selected pages from these documents are included in these specifications for convenience in reference. However, non-inclusion shall not excuse Contractor from performing any construction units cited by number but not shown.

Work shall, in part, be accomplished under the "Unit Of Construction" method of description and payment. A unit of construction (UOC) generally consists of a drawing, (including materials list, notes, installation suggestions, and a unit code or descriptor such as E3-2), the providing of all material shown on the drawing or otherwise referenced, the installation of said materials in their proper place on poles, conductors, in the ground, etc., and all construction tools, equipment, and materials required to accomplish the construction but not a permanent part of the construction.

In the unit of construction drawings, items not a part of the unit of construction are shown dashed. Although most units of construction are mutually compatible, there are cases where contractor must exercise judgment of discretion in the reconcilation of units. Examples include sharing a common bolt between units where each unit specifies an individual bolt, providing a single bonding jumper between two units where each unit specifies an individual jumper, etc. It is to be noticed that all REA bolts carry by implication, the providing and installation of a matching nut. Only nuts in addition to the nut to be supplied with the bolt are noted on the drawings.

Materials referenced on REA units of construction shall be as specified in referenced document (a), above, REA Bulletin 43-5, unless modified by these written specifications or drawings.

Non-REA units of construction are designated by the symbol HE- followed by numbers and letters such as HE-101A. Like REA units, the non-REA unit of construction consists of a drawing or description, the furnishing of all material listed or referenced thereon, the furnishing of all labor for its installation, and all construction material, equipment, tools, machinery, etc. required for its installation but not a permanent part of the construction. Whenever possible, Contractor shall supply REA approved materials when constructing non-REA units of construction.

The units of construction to be accomplished on the project are summarized in a matrix or tabulation sheet entitled "Electrical Units of Construction" and "General Summary-Power Lines". On the "Plan" sheets, "Profile" sheets and miscellaneous drawings, the poles to be supplied or which are effected by construction are given a number. From the "Electrical Units of Construction" sheet, the Contractor may ascertain the exact type and number of construction units to be installed on each pole.

In addition to work described by the Unit of Construction method, other work described by drawings, notes, and general specifications is required of the Contractor.

GENERAL NOTES

Contractor is warned to review and include such other work in his bid and construction. Work to be accomplished on every pole or every guy, for example, is specified by note rather than repetively on the drawings.

26. Implied Work.

Contractor shall be competent in outside line construction work and shall supply all labor and material required to make a complete and workable installation to fulfill the intent of these specifications and drawings. Minor items of material and the labor for its installation, required for a professional and serviceable installation, such as grounding jumpers, grounding connectors, staples, the sawing off of bolt protrusions, and the training of wires, shall be provided at no additional cost as if fully described herein.

27. Connectors.

Select, supply and install cable connectors based upon the size of wire or cable to be joined and the type of cable material. All connectors shall be approved for types of metal or alloy in the cables being joined. Use only installation tools approved by the connector manufacturer. Prepare joints as directed by connector manufacturer, applying any specified chemicals.

28. Armor Rods.

Provide and install preformed armor rods on the 69KV line construction along Alum Creek Drive on the Over Head Ground Wire (#2ACSR) and the Phase Conductors (#4/0 CU). Armor rods shall be of such material as to be compatible with the conductor composition. Adjust the size of all insulator clamps, OHGW support clamps, and connectors required to accommodate the armor rod diameter regardless of hardware sizes shown on standard units of construction.

29. Pole Toppers.

Install pole toppers or pole roofs on all poles supplied for this project.

30. Pole Gains.

Field made pole gains shall be malleable iron or hot dip galvanized.

31. Pole Grounds.

Installation Practices:

Ground wire must clear all ungrounded hardware by 2" minimum.

Connect all ground electrodes together and to the common neutral when it is present.

Check all ground electrodes with a ground meggar.

Drive up to two additional rods with extension couplings if the resistance of an individual electrode is higher than 25 ohms when measured with a ground meggar.

Advise Owner when additional rods have been driven and resulting resistance still exceeds 25 ohms.

Drive ground rod in undisturbed earth at least 24 inches from the face of the pole unless obstructions limit the area where a rod can be driven.

Attach the vertical ground lead along the pole on the quarter in the quadrant that best provides a clear climbing area, and where possible free from traffic hazards. Cover with plastic moulding, beginning at a point two inches below finished grade and extending up the pole a minimum of eight feet.

Do not install aluminum conductor or connectors directly in earth.

Report ground meggar readings by pole number to Owner in writing.

32. Double Arm Implied Hardware

When two or more cross arms are mounted at the same height on a pole or structure, install (2) 5/8" double arming (spacer bolts), (8) 2 1/4 x 2 1/4 x 3/16 with 11/16 hole flat washers, (8) 5/8" nuts and (8) 5/8" lock nuts, type MF. Oval eye bolts, common bolts, shoulder eye bolts, etc. may be used where more appropriate. Select length of bolt as required. Bolt assemblies are implied by construction and do not appear on drawings or material lists but shall be installed as though specified therein.

33. Line Merging Splices

Provide and install full tension compression sleeves to merge new line construction with existing line. Confirm size, materials and stranding of both old line materials and new. Use only sleeves recommended by the manufacturer as satisfactory for the cables to be joined. Observe all manufacturers' installation directions. Use only compression tools and dies approved for the sleeves used. Use REA approved sleeves where such sleeves are available for the size, stranding, and composition of cables to be joined. Splices made for the Contractor's convenience shall meet these specifications and be at his expense. Because of the short overall length of the construction, more than one. Contractor convenience splice in any single run conductor shall require Owner's approval.

34. Trenching, Backfilling, Compacting, Patching

Dig, drill or excavate all openings required for the erection or enclosure of all electrical materials included in this work. Backfill with such materials as will cause no damage to the electrical materials below. Compact as required for intended use of grade surface. Patch with materials required to restore original integrity of sod, soil, gravel, sidewalk or road as applicable. Fill and compact all vacated pole holes. All vacated pole holes which will lie under planned pavement or road shoulders shall be brought to the attention of the Highway Department Field Inspector. Backfill and compaction method shall be approved by said inspector for such holes.

35. Transfer of Street Lighting Fixture and Circuit

Transfer existing street lighting fixture, arm, spool rack, and conductors from existing pole to pole P18 which replaces it in approximate same location. Street lighting circuit from north will dead end on P18. Supply additional conductor and splices as needed. Transfer existing street lighting fixtures, arms, spools, racks, and conductors from existing poles P1A and P1 which replaces them in approximate same location. Street lighting circuit from the south will dead end on P1.

36. Timber Products

Use poles, crossarms, and other timber products, whose physical characteristics, method of treatment, type of preservation, instructions on inspection and general procedure are in accordance with REA standards and requirements.

Crossarms shall be Southern Yellow Pine or Douglas Fir, treated with creosote or pentachlorophenol by pressure process.

GENERAL NOTES

Poles shall be Southern Yellow Pine, Douglas Fir, Western Red Cedar, and conditionally other Genus and Species proposed by Contractor and approved by Owner in writing to insure timely procurement. Pole preservative may be creosote or pentachlorophenol or creosote plus 2% Penta. Poles shall be pressure treated full length. Poles may be offered under either the Insured Warranted or Independently Inspected programs or both.

Pole units consist of one new pole erected in place. The first two digits indicate the length of the pole, the third digit indicates the ANSI class. (For example 90-2 means a pole 90 feet long, class 2.)

All timber preservation costs, insured warranty program costs or independently inspected service costs are a part of the pole cost and no additional payment will be made therefore.

37. Insulator Ties

Provide and install tie wires on conductors and insulators as required as part of miscellaneous work not covered by construction units. Tie wires shall be insulated or bare corresponding to the conductors tied. Tie wires shall be annealed copper size #2 for 2/0 copper line conductors using "High tension" style, "Cross top" style, or "Looped Western Union" style ties.

NOTES

1. The TM-101 special backfill shall be specified by Engineer where replacement of earth removed from hole will not provide adequate pole stability.
2. The specification for aggregate given below is minimum. In areas where smaller fines can be procured at reasonable cost it is recommended that Engineer so specify.
3. The aggregate shall be well mixed in stock pile so that materials distributed to individual poles shall essentially conform to specifications.

NOTE:

Clean the wire with abrasive cloth before making the splice.

Splice shall not be within 10 feet of insulator.

COMPLETED SPLICE

DIRECTIONS FOR MAKING A.C.S.R. SPLICE

1. Slip Aluminum Sleeve on cable far enough back to be out of the way. Cut back Aluminum Strands at end of cable 3/8"more than half the length of steel sleeve.
2. Insert steel core wires in the steel sleeve and press with inner groove of tool. Press entire length of sleeve starting at the middle and working toward the ends. Leave about 1/16" space between presses.
3. Straighten steel sleeve by hammering carefully against a suitable block.
4. Place a piece of friction tape on the cable to mark the position of the end of the Aluminum sleeve such that it will be centered on the splice.
5. Clean conductor by wirebrushing, paint the steel sleeve and the adjacent cable that will be covered by the aluminum sleeve, with a suitable corrosion inhibitor.
6. Slip the Aluminum sleeve in place and press with the outer groove of tool using the same procedure as with the steel sleeve.
7. Straighten entire splice by hammering carefully against a suitable block.
8. Splice shall not be within 10 feet of Insulator.

GENERAL INFORMATION

INTRODUCTION

The project consists of a 2.6 mile major relocation of Refugee Road in Franklin County, Ohio. The alignment begins at Lockburne Road, approximately 1500 feet south of its intersection with existing Refugee Road, and extends eastward crossing Fairwood Avenue, a spur and the main line of the Norfolk and Western Railroad, the existing Refugee Road, Alum Creek Drive and Alum Creek, ending at the intersection of U.S. Route 33 and the existing Refugee Road. Included with this project are structures for six grade separations, a North and a South Refugee Service Road, and improvement for 0.62 miles of Alum Creek Drive and ramps at the Alum Creek Drive Interchange.

Proposed cuts and fill are up to 35 feet in depth and height.

GEOLOGY AND OBSERVATIONS OF THE PROJECT

The alignment begins on the uplands between the Scioto River and Alum Creek and proceeds to the east floodplain of Alum Creek. The natural soil deposits in this area are comprised of glacial till on the highland and glacial outwash deposits in the valley of Alum Creek. Generalized geologic reports indicate the deposits to be quite thick, possibly in excess of 100 feet, overlying shale of the Devonian age.

A boggy depression occurs just west of the intersection of the proposed Refugee Road South with existing Refugee Road.

A sanitary land fill occurs on the alignment of Ramp C and Refugee Road North, and in the proximity of the intersection of Ramp D and the main alignment of Refugee Road.

EXPLORATION

Exploratory borings were made to procure Standard Penetration drive samples by means of a truck-mounted rotary drill rig. Drilling was performed at intermittent times between June 20 and December 19, 1978. Included with this report are the logs of borings made in conjunction with the foundation investigations for structures on the project.

INVESTIGATIONAL FINDINGS

Subsoils occuring immediately below proposed grade and in the embankment foundation areas consist predominantly of sandy silts (A-4a), silt clays (A-6a) and clays (A-7-6).

Roadway fill was found to occur in the borings along Alum Creek Drive which is presently in a shallow side-hill cut-fill section south of existing Refugee Road. In one area north of existing Refugee Road, Alum Creek Drive is on fill embankment occuring in a ravine. These fills comprise predominantly sandy silts (A-4a) and silt clays (A-6a).

The sanitary land fill was found to be as deep as 28.4 feet at the boring locations and to extend as much as 21.5 feet below grade at station 88+00, 50 feet left of centerline on Refugee Road North.

The bog area was found to contain very soft, compressible, low strength silts and clays (some of which were organic) and peats, encountered to depths of approximately 9 to 16 feet. These conditions were found to occur approximately between stations 24+50 and 26+00 at 50 feet left of centerline, between stations 23+50 and 26+00 on centerline and between stations 23+00 and 25+50 at 50 feet right of centerline, along the alignment of Refugee Road South.

GEOLOGY AND OBSERVATIONS OF THE PROJECT

THE ALIGNMENT BEGINS ON THE UPLANDS BETWEEN THE SCIOTO RIVER AND ALUM CREEK AND PROCEEDS TO THE EAST FLOODPLAIN OF ALUM CREEK. THE NATURAL SOIL DEPOSITS IN THIS AREA ARE COMPRISED OF GLACIAL TILL ON THE HIGHLAND AND GLACIAL OUTWASH DEPOSITS IN THE VALLEY OF ALUM CREEK. GENERALIZED GEOLOGIC REPORTS INDICATE THE DEPOSITS TO BE QUITE THICK, POSSIBLE IN EXCESS OF 100 FEET, OVERLYING SHALE OF THE DEVONIAN AGE.

A BOGGY DEPRESSION OCCURS JUST WEST OF THE INTERSECTION OF THE PROPOSED REFUGEE ROAD SOUTH WITH EXISTING REFUGEE ROAD.

A SANITARY LAND FILL OCCURS ON THE ALIGNMENT OF RAMP C AND REFUGEE ROAD NORTH, AND IN THE PROXIMITY OF THE INTERSECTION OF RAMP D AND THE MAIN ALIGNMENT OF REFUGEE ROAD.

INVESTIGATIONAL FINDINGS

SUBSOILS OCCURRING IMMEDIATELY BELOW PROPOSED GRADE AND IN THE EMBANKMENT FOUNDATION AREAS CONSIST PREDOMINANTLY OF SANDY SILTS (A-4A), SILT CLAYS (A-6A) AND CLAYS (A-7-6).

ROADWAY FILL WAS FOUND TO OCCUR IN THE BORINGS ALONG ALUM CREEK DRIVE WHICH IS PRESENTLY IN A SHALLOW SIDE-HILL CUT-FILL SECTION SOUTH OF EXISTING REFUGEE ROAD. IN ONE AREA NORTH OF EXISTING REFUGEE ROAD, ALUM CREEK DRIVE IS ON FILL EMBANKMENT OCCURRING IN A RAVINE. THESE FILLS COMPRISE PREDOMINANTLY SANDY SILTS (A-4A) AND SILT CLAYS (A-6A).

THE SANITARY LAND FILL WAS FOUND TO BE AS DEEP AS 28.4 FEET AT THE BORING LOCATIONS AND TO EXTEND AS MUCH AS 21.5 FEET BELOW GRADE AT STATION 88+00, 50 FEET LEFT OF CENTERLINE ON REFUGEE ROAD NORTH.

THE BOG AREA WAS FOUND TO CONTAIN VERY SOFT, COMPRESSIBLE, LOW STRENGTH SILTS AND CLAYS (SOME OF WHICH WERE ORGANIC) AND PEATS, ENCOUNTERED TO DEPTHS OF APPROXIMATELY 9 TO 16 FEET. THESE CONDITIONS WERE FOUND TO OCCUR APPROXIMATELY BETWEEN STATIONS 24+50 AND 26+00 AT 50 FEET LEFT OF CENTERLINE, BETWEEN STATIONS 23+50 AND 26+00 ON CENTERLINE AND BETWEEN STATIONS 23+00 AND 25+50 AT 50 FEET RIGHT OF CENTERLINE, ALONG THE ALIGNMENT OF REFUGEE ROAD SOUTH.
