QUANTITIES
BY JHO FN SL DATE 3-9-72
CHECKED FN JDC DATE 4-24-72

REFERENCE — SHALL BE MADE TO STANDARD DRAWINGS AS-1-67, REVISED 6-12-69, SD-1-69, SHEETS 1 AND 2 DATED 6-12-69, BR-1-67, SHEET 1 REVISED 10-15-71, RB-1-55, REVISED 2-2-59, AND TO SUPPLEMENTAL SPECIFICATIONS 808 DATED 1-1-71, 836 DATED 1-1-71 AND 838 DATED 3-18-70.

DESIGN SPECIFICATIONS: — THIS STRUCTURE CONFORMS TO "STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES" ADOPTED BY THE AMERICAN ASSOCIATION OF STATE HIGHWAY OFFICIALS, 1969, INCLUDING THE OHIO "SUPPLEMENT" TO THESE SPECIFICATIONS.

DESIGN DATA: — DESIGN LOADING - HS 20-44

CONCRETE CLASS C - UNIT STRESS 1200 PSI FOR SUPERSTRUCTURE
UNIT STRESS 1333 PSI FOR SUBSTRUCTURE

STRUCTURAL STEEL - ASTM A36 - UNIT STRESS 20,000 PSI.

REINFORCING STEEL - ASTM A615, A616 OR A617 - UNIT STRESS 20,000 PSI.
IF BARS IN ACCORDANCE WITH ASTM A616 ARE PROVIDED THEY SHALL BE SUBJECT TO BEND TESTS AS PER AASHO DESIGNATION M 42-70.

EMBANKMENT CONSTRUCTION: — THE EMBANKMENT SHALL BE CONSTRUCTED TO THE LEVEL OF THE SUBGRADE BETWEEN THE FORWARD ABUTMENT FOR BRIDGE NO. HAM-471-0047 AND THE REAR ABUTMENT FOR BRIDGE NO. HAM-471- RAMP A OFF COLUMBIA VIADUCT. EXCAVATION SHALL THEN BE MADE FOR THE REAR ABUTMENT AND PIER 1.

PILES — SHALL BE DRIVEN TO A MINIMUM BEARING CAPACITY OF 50 TONS PER PILE.

UTILITY LINES: — ALL EXPENSE INVOLVED IN RELOCATING (INSTALLING) THE AFFECTED UTILITY LINES SHALL BE BORNE BY THE OWNER(S). THE CONTRACTOR AND OWNER(S) ARE REQUESTED TO COOPERATE BY ARRANGING THEIR WORK IN SUCH A MANNER THAT INCONVENIENCE TO EITHER WOULD BE HELD TO A MINIMUM.

PLANS FOR EXISTING BRIDGE: — PRINTS OF THE PLANS OF THE DESIGN AND SHOP DRAWINGS ARE AVAILABLE FOR INSPECTION BY THE PROSPECTIVE BIDDERS AT THE ENGINEERING DIVISION, ROOM 314, CITY HALL, CITY OF CINCINNATI.

IT SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR TO DETERMINE THE ACCURACY OF THESE PLANS AND TO OBTAIN FIELD MEASUREMENTS OF THE EXISTING STRUCTURE IN ORDER TO INSURE A PROPER FIT BETWEEN THE EXISTING AND PROPOSED WORK.

PAINTING EXISTING STEEL: — EXISTING PAINT THAT IS DAMAGED BY THE CONTRACTOR IN THE RECONSTRUCTION OF THE EXISTING STRUCTURE SHALL BE REPAINTED IN ACCORDANCE WITH SECTION 514.06. SUCH WORK SHALL BE INCIDENTAL TO ITEM 514, "FIELD PAINTING OF STRUCTURAL STEEL".

PORTIONS OF STRUCTURE REMOVED — IN ORDER TO ATTACH NEW STRUCTURE ONTO EXISTING STRUCTURE, PORTIONS OF THE EXISTING STRUCTURE SHALL BE REMOVED.

COST OF ALL REMOVALS OF THE EXISTING STRUCTURE SHALL BE INCLUDED IN THE CONTRACT LUMP SUM PRICE BID FOR ITEM 202, "PORTIONS OF STRUCTURE REMOVED".

FOR INFORMATION ONLY - APPROXIMATE REMOVAL QUANTITIES ARE - CONCRETE, 83 cu. yds. STRUCTURAL STEEL, 15,000 lbs.

METAL JOINT WITH PREFORMED ELASTIC JOINT SEALER:

DESCRIPTION

THIS WORK SHALL CONSIST OF THE MANUFACTURE OF SHOP PREFABRICATED JOINT SYSTEMS AS SHOWN ON THE PLANS.

THE PREFABRICATED JOINT SHALL BE CONSTRUCTED OF STRUCTURAL STEEL SECTIONS, WITH POLYCHLOROPRENE SEALERS SECURELY BONDED IN PLACE.

THE METAL SURFACES IN DIRECT CONTACT WITH THE POLYCHLOROPRENE SEALERS SHALL BE SAND BLASTED AND PROPERLY TREATED (SO AS TO PROVIDE A HIGH STRENGTH BOND BETWEEN THE SEAL AND MATING METAL SURFACES). THEN THE SEALER SHALL BE SECURELY BONDED TO THE METAL WITH AN APPROVED ADHESIVE.

ALL STEEL COMPONENTS OF THE ASSEMBLY EXCEPT THOSE AREAS NOTED ABOVE WHICH ARE IN CONTACT WITH THE SEALERS SHALL BE PAINTED IN ACCORDANCE WITH SECTION 514.

MATERIALS

PHYSICAL PROPERTIES OF PREFORMED ELASTIC JOINT SEALER AND LUBRICANT ADHESIVE.
SEE SECTION 705.11.

STEEL COMPONENTS - ASTM A 36.

BASIS OF PAYMENT

THE CONTRACT UNIT PRICE PER LINEAL FOOT BID FOR ITEM 516 TYPE I OR II METAL JOINT WITH PREFORMED ELASTIC JOINT SEALER, SHALL BE FULL PAYMENT FOR ALL STRUCTURAL STEEL, POLYCHLOROPRENE SEALERS, ADHESIVES, PAINT AND ALL LABOR AND MATERIALS NECESSARY TO FABRICATE AND INSTALL THE JOINTS IN ACCORDANCE WITH THE PLANS AND SPECIFICATIONS.

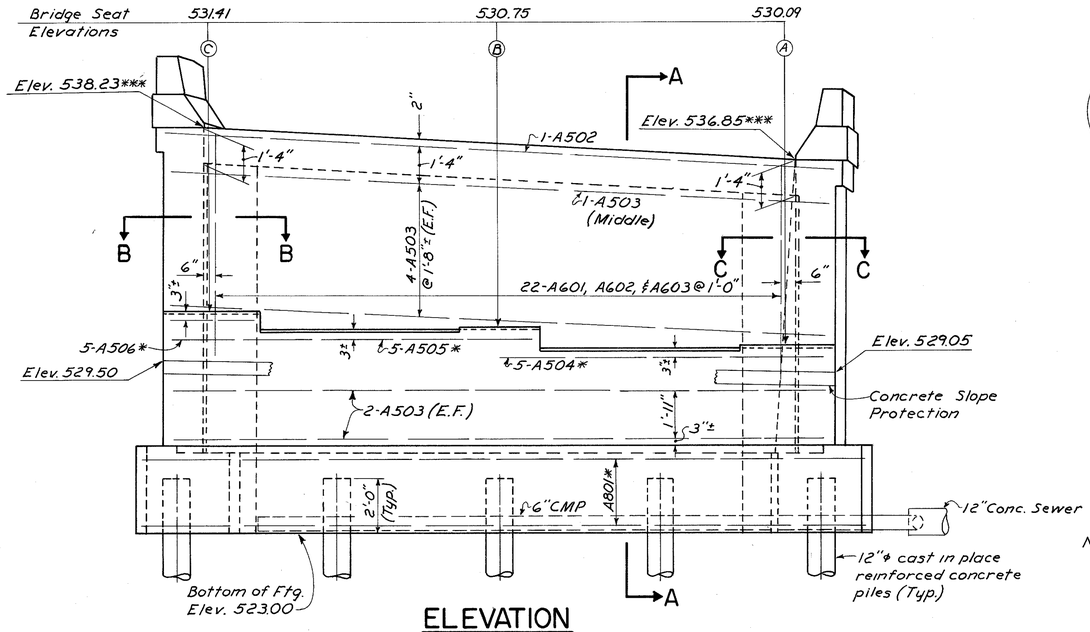
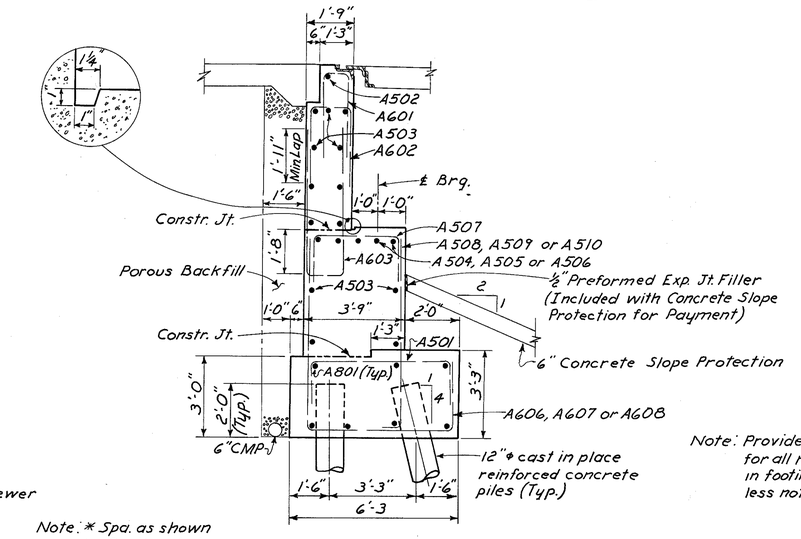
FOOTING PLAN



ELEVATION

Note: * Spa. as shown in Section A-A.
*** Elevs. shown are at Front Face of Backwall.



SECTION A-A

Notes:
Porous Backfill 1'-0" thick outside back edge of footing shall extend up to the underside of the approach slab and laterally to the limits of the Wingwalls as shown in plan.
For Section B-B & C-C, see Sh. No. 260.
For Wingwall Details, see Sh. No. 260.
For End Dam Details see Sh. No. 267.

All concrete shall be Class "C" Concrete.
E.F. denotes Each Face.

Note: Provide 3" clearance for all reinforcing steel in footing, minimum, unless noted otherwise.

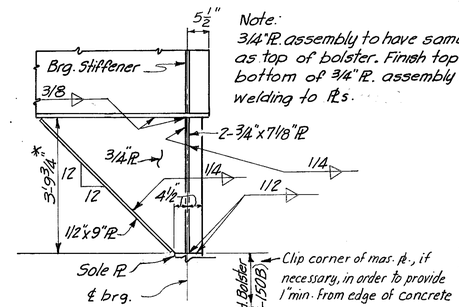
LINK PL. DETAIL



DETAIL E

Note:
3/4" PL assembly to have same width as top of bolster. Finish top and bottom of 3/4" PL. assembly before welding to PLs.

*Before fabrication of 3/4" plate assembly the contractor must first determine the existing bridge seat elevation. The 3'-9 3/4" dimension was calculated by using elev. 530.11 as pier bridge seat elevation. However this dimension may have to be revised, once the contractor determines the existing bridge seat elevation.

PLAN

Notes:
All dimensions & Reinforcing steel spacings are measured along or normal to the Base Line unless noted otherwise.
All longitudinal bars shall be field bent as required to conform to the roadway curvature.
All transverse bars shall be placed radially to ℄ Ramp A.
Field bend or cut reinforcing bars where necessary to miss drain inlet.
For Sections A-A, B-B, C-C, D-D, E-E, F-F & G-G see Sh. 275.
For Section H-H & Detail A see Sh. 281
For Roadway Surface Elevations see Sh. 286
For Screed Elevations see Sh. 285
For Railing Details see Sh. 287
For Drainage Details see Sh. 290
For Fascia & Joint Layout see Sh. 284

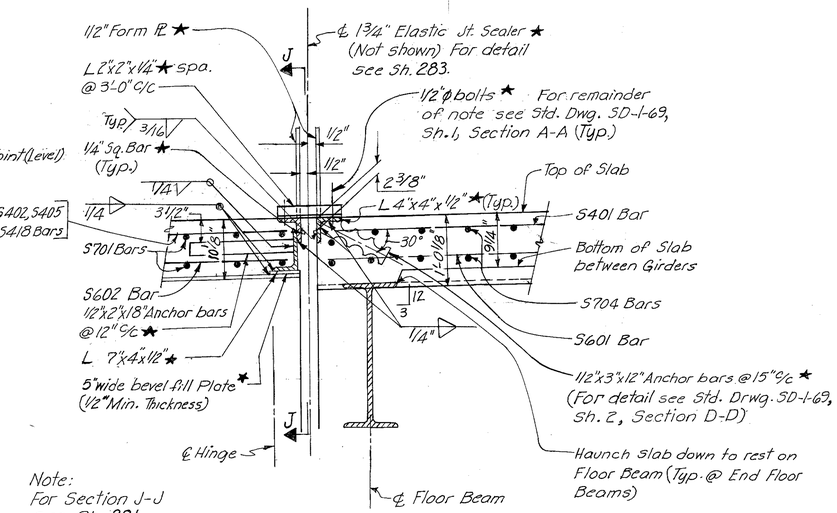
SECTION A-A

* This is the nominal dimension. The quantity of deck concrete to be paid for shall be based upon this dimension, even though deviation from it may be necessary because the top flange of the girder may not have the exact camber or conformation required to place it parallel to the finished grade. Deduction shall be made for volume of encased steel plates as per Sec. 511.18 of the Construction and Material Specifications.

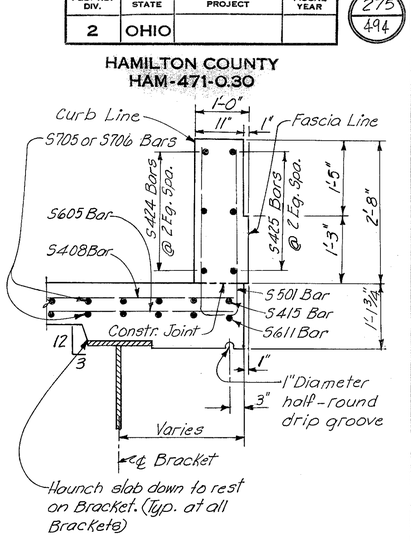
** A typical haunch width of 9" shall be used for computing quantity of concrete. However, the haunch width may vary between 6" and 12" provided that the slope shall be not more than 1:4 for a haunch less than 9" in width.



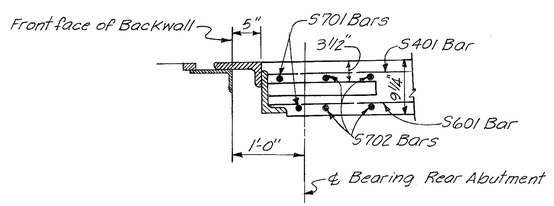
Note:
For Section J-J See Sh. 281.

SECTION D-D

Note: Items marked with a Star. (★) to be included with Item 516, Type I Metal Joint with Preformed Elastic Joint Sealer, for payment.

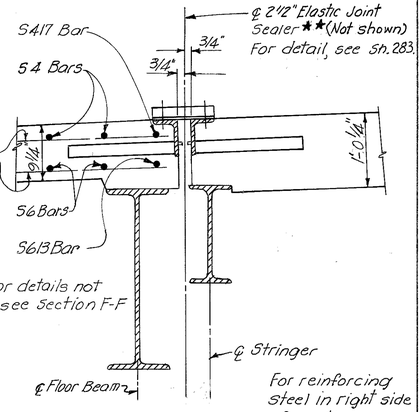


SECTION C-C

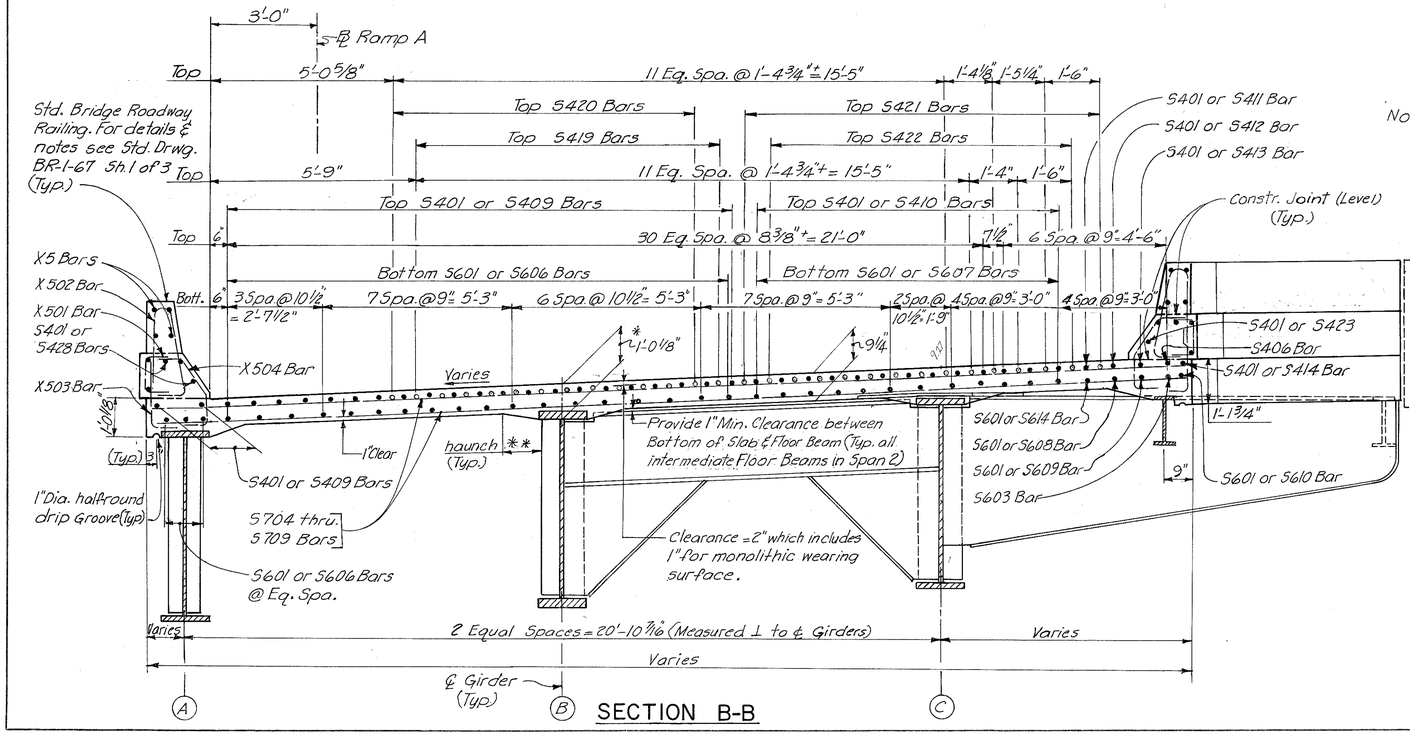


SECTION E-E

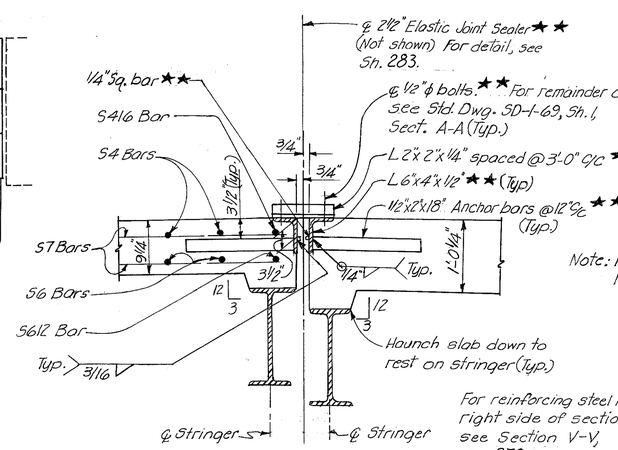
Note: For details not shown see Section A-A, Std. Dr. SD-1-69, Sh. 1



SECTION G-G



SECTION B-B



SECTION F-F

For reinforcing steel in right side of section see Section V-V, Sh. 278.

Note:
Items marked with two stars ★★ to be included with Item 516, Type II Metal Joint with Preformed Elastic Joint Sealer, for payment.

Note: For location of Sections A-A, B-B, C-C, D-D, E-E, F-F & G-G and other notes see Sh. 274.

NOTES:

BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED, AND THE FIRST TWO DIGITS WHEN FOUR ARE USED, INDICATE THE BAR SIZE NUMBER. FOR EXAMPLE S519 IS A NO. 5 SIZE BAR AND P1025 IS A NO. 10 SIZE.

FOR BAR BENDING SCHEDULE SEE SH.NO. 470

TOTAL WEIGHT OF REINFORCING STEEL = 82,705 Lbs.

HAZELET & ERDAL

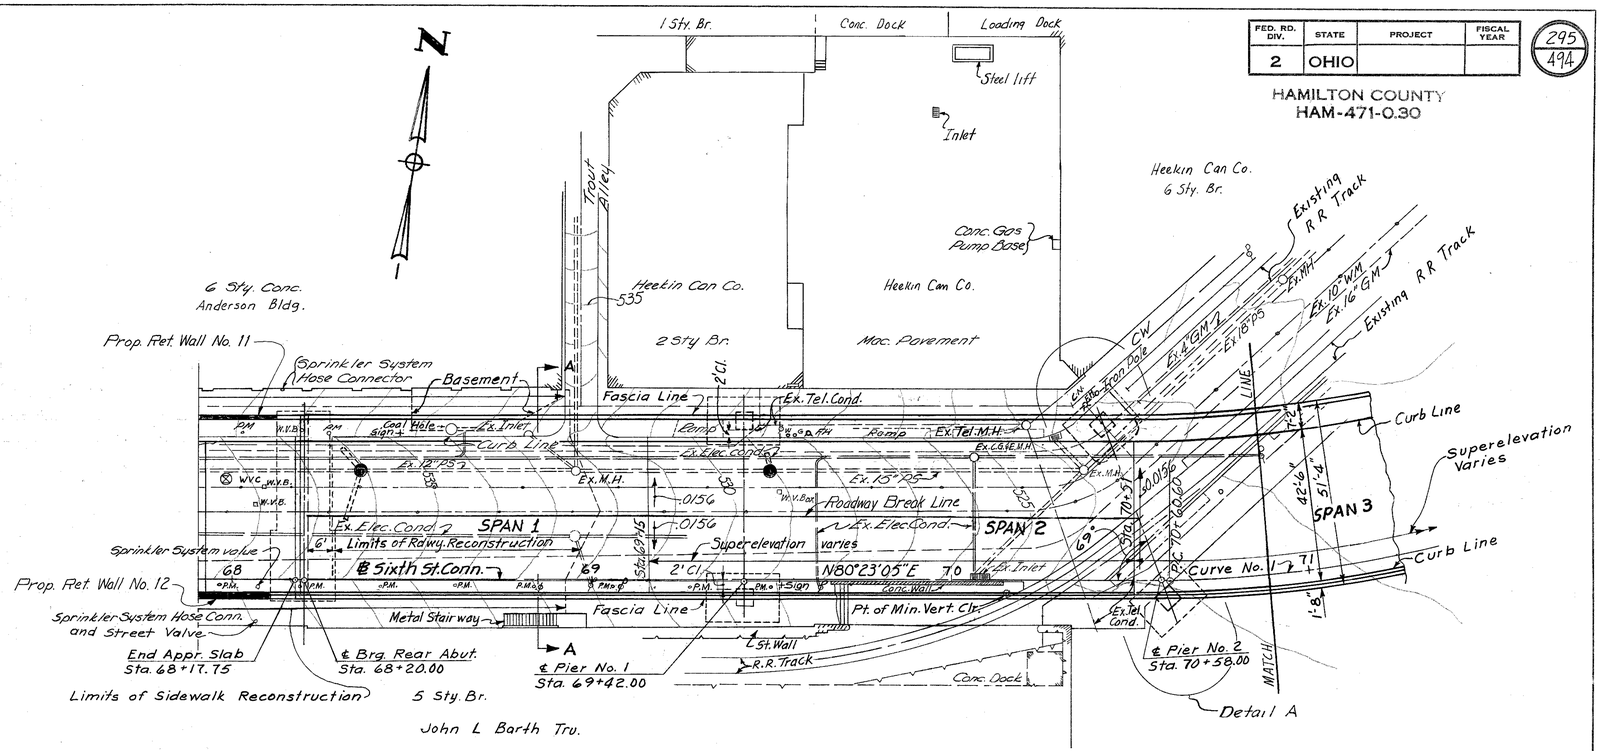
DETAIL A



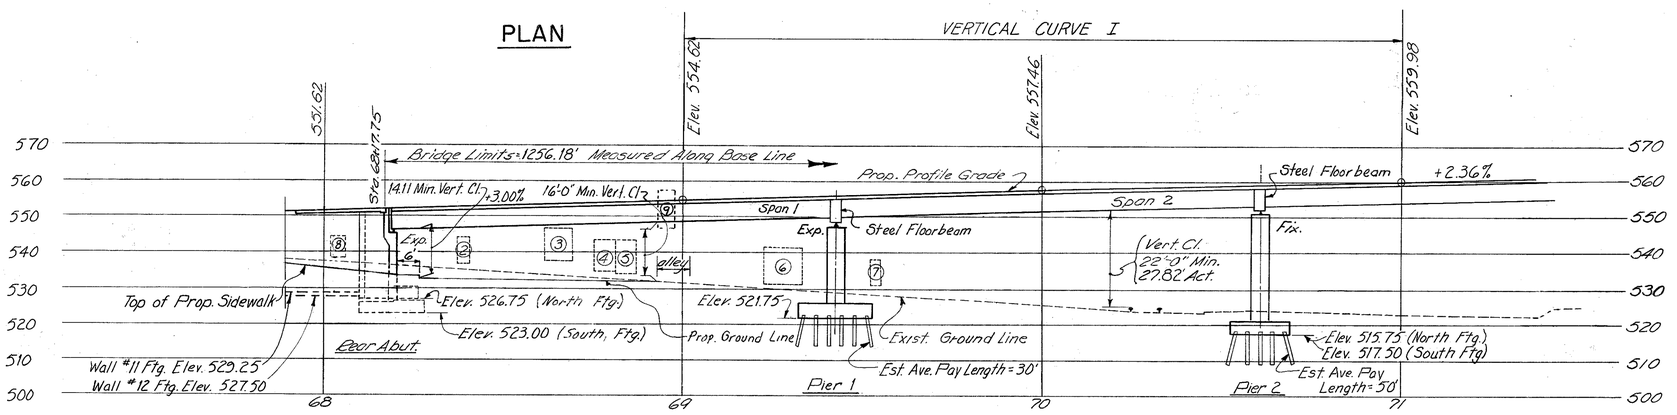
VERTICAL CURVE I
PVI Sta. 70+00.00
PVI Elev. 557.50
L = 200
g_1 = +3.0 %
g_2 = +2.36 %

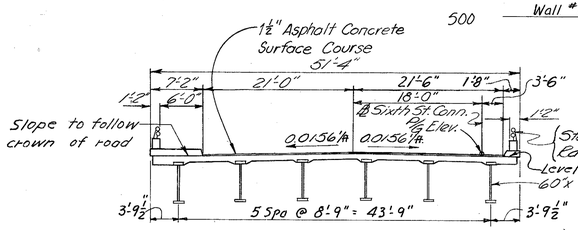
VERTICAL CURVE II
PVI Sta. 74+00.00
PVI Elev. 566.94
L = 300
g_1 = +2.36 %
g_2 = -1.0 %

VERTICAL CURVE III
PVI Sta. 78+68.00
PVI Elev. 562.26
L = 200'
g_1 = -1.0 %
g_2 = -5.5 %

Vertical Curve data does not apply to bridge or graphic curve elevations. The bridge elevations were obtained by adding 1½" to elevations obtained from vertical curve data.

PLAN





SECTION A A

PROFILE ON BASE LINE

Door Openings N. Side of Sixth St:

② Door
③ Loading Dock
④ Door
⑤ Overhead Door & Entr. to Elevator
⑥ Door & Loading
⑦ Entrance Door

Door Openings S. Side of Sixth St:

⑧ Door
⑨ Door at top of Stairway

NOTE

Piers 4, 5, and 6 as shown on sheet 296 have been constructed under a previous contract. The remaining substructure units, and all the superstructure shall be constructed under this contract.
Piers 3 and 4 are parallel.
Piers 7, 8 and 9 are parallel.
Pier 1 is parallel to ℄ Brg. Rear Abutment and perpendicular to base line Sixth St. Connection.
For Base Line Curve Data, See Sh. 296.
All Piles are 12" ϕ C.I.P. Reinforced Concrete Piles.
For roadway cross-section at Sta 68+17.75 see Sh. 119.

GENERAL NOTES

FEDERAL REGION	STATE	PROJECT	FISCAL YEAR
5	OHIO		

298/494

HAMILTON COUNTY
HAM-471-0.39

REFERENCE	SHALL BE MADE TO STANDARD DRAWINGS AS-1-67, REVISED 6-12-69 SD-1-69, SHEETS 1 AND 2 DATED 6-12-69 BR-2-67, REVISED 10-15-71 RB-1-55, REVISED 2-2-59 FSB-1-62, REVISED 1-15-63 AND TO SUPPLEMENTAL SPECIFICATIONS: 808 DATED 1-1-71 836 DATED 1-1-71 838 DATED 3-18-70 927 DATED 1-1-71
DESIGN SPECIFICATIONS:	THIS STRUCTURE CONFORMS TO "STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES" ADOPTED BY THE AMERICAN ASSOCIATION OF STATE HIGHWAY OFFICIALS, 1969, INCLUDING THE OHIO "SUPPLEMENT" TO THESE SPECIFICATIONS.
DESIGN DATA:	DESIGN LAODING-HS20-44 "AND THE INTERSTATE ALTERNATE LOADING". CONCRETE CLASS C - UNIT STRESS 1200 PSI FOR SUPERSTRUCTURE UNIT STRESS 1333 PSI FOR SUBSTRUCTURE STRUCTURAL STEEL ASTM A36 - UNIT STRESS 20,000 PSI. REINFORCING STEEL ASTM A615, A616 OR A617 - UNIT STRESS 20,000 PSI. IF BARS IN ACCORDANCE WITH ASTM A 616 ARE PROVIDED, THEY SHALL BE SUBJECT TO BEND TESTS AS PER AASHO DESIGNATION M42-70.
PILES	SHALL BE DRIVEN TO A MINIMUM BEARING CAPACITY OF 50 TONS PER PILE FOR PIERS 1, 2, 3, 7, 8, 9 AND 10.
FOUNDATION BEARING PRESSURE:	REAR AND FORWARD ABUTMENT FOOTINGS AND PIER 11 AND 12 FOOTINGS ARE DESIGNED FOR A MAXIMUM BEARING PRESSURE OF 2 1/2 TONS PER SQ. FT.
UTILITY LINES	ALL EXPENSE INVOLVED IN RELOCATING (INSTALLING) THE AFFECTED UTILITY LINES SHALL BE BORNE BY THE OWNER(S). THE CONTRACTOR AND OWNER(S) ARE REQUESTED TO COOPERATE BY ARRANGING THEIR WORK IN SUCH A MANNER THAT INCONVENIENCE TO EITHER WOULD BE HELD TO A MINIMUM.
STAINLESS STEEL FASTENERS	SHALL BE PROPERLY PASSIVATED TO REMOVE SURFACE IMPURITIES AND SHALL BE FURNISHED WITH A LUSTROUS FINISH.
FIELD VERIFICATIONS	BEFORE ANY ADDITIONAL CAP WORK AT PIERS 5 & 6 IS DONE AND BEFORE ANY FABRICATION OF STRUCTURAL STEEL IS STARTED, THE CONTRACTOR MUST FIRST DETERMINE THE EXACT LOCATION OF EXISTING PIERS 4, 5 AND 6.
EMBANKMENT CONSTRUCTION	BEFORE THE BACKWALL IS CONSTRUCTED THE EMBANKMENT SHALL BE CONSTRUCTED UP TO THE LEVEL OF THE SUBGRADE WITH A 1:1 SLOPE FROM THE BRIDGE SEAT TO THE SUBGRADE, FOR A MINIMUM DISTANCE OF 200 FT. BACK OF THE ABUTMENT.
PREBORED HOLES	ALL THE PILES IN THE NORTH FOOTING OF PIER NO. 1 AND THE PILES THAT ARE INDICATED ON SHEET 309 AT PIER NO. 2 SHALL BE STARTED IN PREBORED HOLES. HOLES TO BE PREBORED TO ELEVATION 515.00 AT PIER NO. 1 AND ELEVATION 510.00 AT PIER NO. 2.
DECK REINFORCING BARS:	At the Contractor's option, a portion (not to exceed 25%) of the upper longitudinal bars (S401) in the deck slab may be placed beneath the upper transverse bars for support of the top mat.
MAINTENANCE OF TRAFFIC:	Refer to sheets 13 and 13A

EXPLORATORY EXCAVATION

Before begining construction of retaining walls 11 and 12 or the rear abutment, pier 1 and pier 2 of Bridge No. HAM-471-0044, the Contractor shall excavate exploratory pits (at least 5'x5') at locations as hereafter indicated. These pits shall extend laterally to face of building foundation wall and vertically a sufficient depth to determine elevations for the building footings and the amount of their projections beyond the presently exposed face of the foundation wall. All pertinent dimensions and elevations shall be adequately referenced to the baseline of survey and its controls. This information shall be properly recorded and 5 copies submitted to the Director at least 15 weeks before construction is scheduled to begin (on any of these named portions of the work) in order to permit evaluation of the data with respect to the need or desirability for modifications in the design or to details as presently shown on the project plans for these walls & piers.

All excavation and backfill for exploratory pits which falls beyond the normal limits of structure excavation shall be paid for at the unit price bid for Item 503, unclassified excavation. Any excavations below proposed footing elevations shall be backfilled with granular material in accordance with Sec. 203. Any extra cost (due to exploratory pits) for cofferdams, cribs and sheeting shall be included in the lump sum bid for each of the pertinent 503 cofferdam items for payment.

Pits will be required at the following locations

1. Allen Temple, African M.E. Church, Parcel 5262
   Two pits (one near each end) along north wall.
2. John L. Barth "Tr.", Parcel 5261
   Four pits along north wall (one between Sta. 67+50 - 67+60, one between 68+00 - 68+13, one between 68+13 - 68+30 and one between 69+40 - 69+60)
3. Anderson-Hanig Realty Co., Parcel 5265
   Two pits along south wall (one between 67+50 - 67+80, and one between 68+10 - 68+30)
4. The Heekin Can Co., Parcel 5266A (2 Story brk.)
   One pit along south wall between Sta. 69+30 - 69+60
5. The Heekin Can Co., 6 story brick
   One pit at south corner, approx. Sta. 70+35

The above identified parcels are shown on plan sheet 488.

Elevations have been established as follows, but the Contractor shall verify them in his recorded data.

1. Allen Temple — Sta. 66+66, Elev. 538.77 basement floor
   66+82, Elev. 539.62 basement floor
   66+66, 11' Rt., Elev. 539.36, bottom of window well.
   67+35, 11' Rt., Elev. 539.09, bottom of window well.
2. John L. Barth "Tr." — 68+13 (back) 530.91, basement flr.
   68+13 (ahead) 520.00, basement flr.
   69+50, 525.40, ground surface, inside of building.
3. Anderson-Hanig Realty Co., 533.8 - 534.64 basement flr.
4. Heekin Can Co. (2 story brick)
   Approx. Sta. 69+40, Elev. 522.16, Elevator shaft basement.
5. Heekin Can Co. (6 story brick)
   Approx. Sta. 70+35, Elev. 508.7, basement floor.

CRACK AND CONDITION SURVEY

Prior to the start of construction of Ret. Wall 11, 12, piers 1 and 2, and rear abutment of HAM-471-0044, the Contractor will make a "crack and condition" survey of Right-of-Way Parcels 5264, 5265, 5266A, 5262 and 5261 including suitable photographs of the buildings immediately adjacent to the named units of construction. Copies of this survey will be furnished to the respective property owners for their concurrence and acceptance, and to the Engineer for his use and file prior to construction, as foresaid.

The Contractor will exercise extreme care during the construction of the above mentioned piers, retaining walls and abutment so as to insure against damage to the adjacent buildings.

Following completion of the construction adjacent to the affected buildings, the "crack and condition" survey will be repeated, and damage to the buildings, if any, resulting from the construction operations shall be repaired to the satisfaction of the property owners by the Contractor at his own expense.

It is understood that the responsibility for the construction adjacent to the buildings remains entirely with the Contractor, and he alone shall be responsible for any damage, to the above mentioned property owners from said construction.

Any additional cost due to the procedures outlined above shall be considered a subsidiary obligation of the Contractor and shall be included in the unit prices bid for the various relevant items in the proposal.

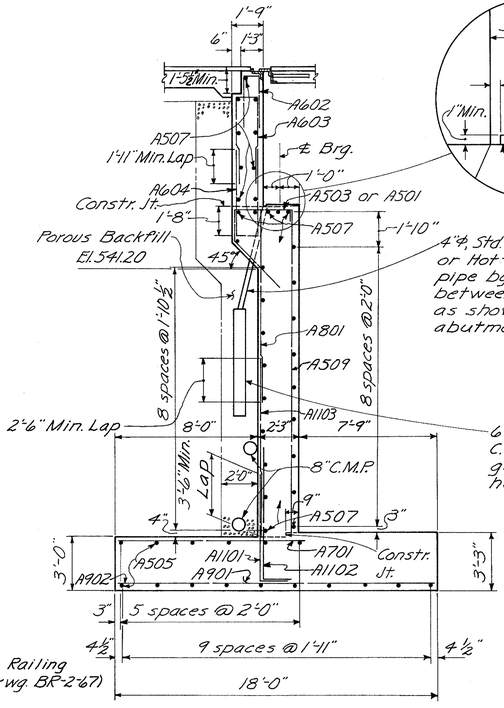
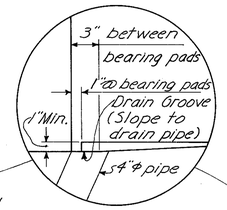
PLAN

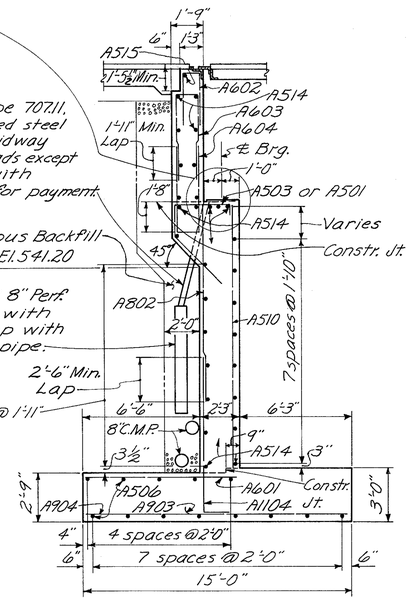


SECTION A-A

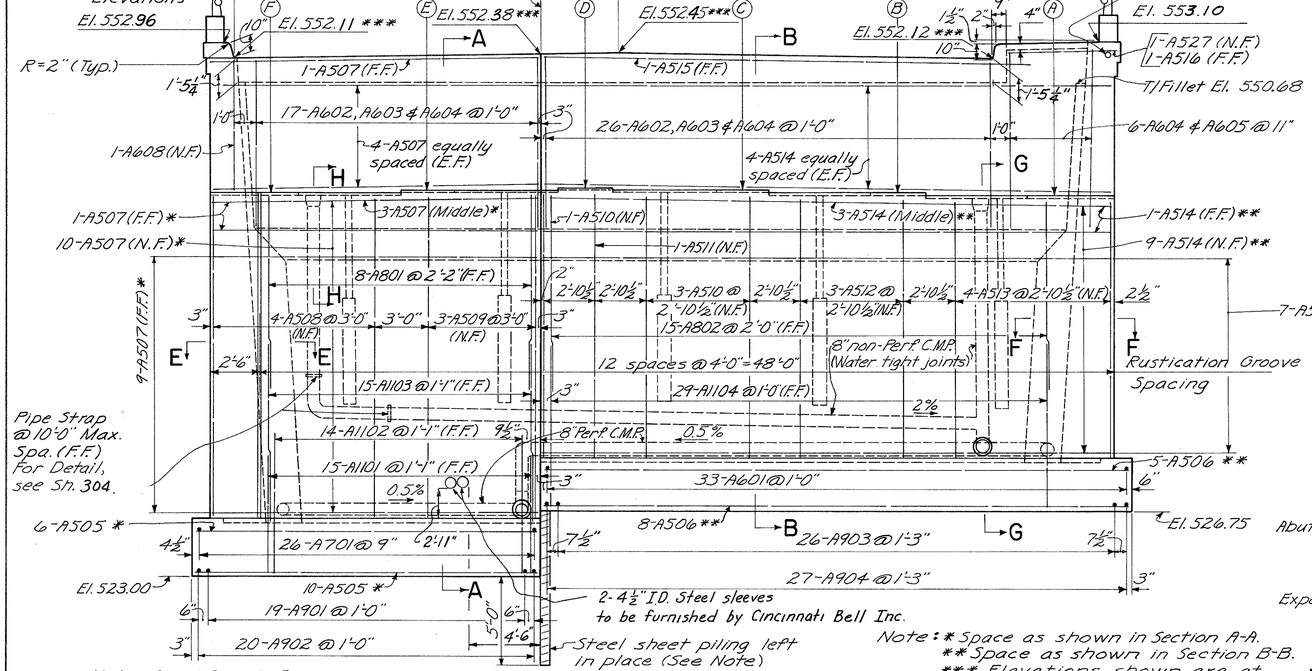


4" ø, Std. alloy steel pipe 707.11, or Hot-Dip Galvanized steel pipe by 6'-0" long. (Midway between bearing pads except as shown). Include with abutment concrete for payment.

6'-0" length of 8" Perf. C.M.P. Provide with galvanized cap with hole for 4" ø pipe.



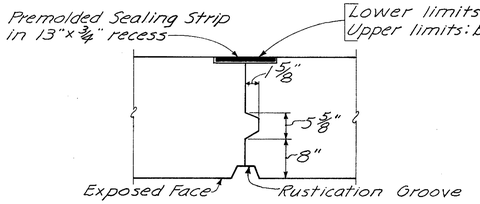
SECTION B-B



Note: Steel Sheet Piling left in place shall have a minimum section modulus of 70 inch³ per foot of wall. Used piling in good condition may be used.

ELEVATION

Note: * Space as shown in Section A-A.
** Space as shown in Section B-B.
*** Elevations shown are at Front Face of Backwall. (Top of steel, ¼" below top of wearing Surface Course)



CONTRACTION JOINT DETAIL

Notes: POROUS BACKFILL, 2'-0" thick outside back edge of Abutment and Wingwalls, shall extend up to the plane of the subgrade and laterally to the limits of the wingwalls as shown in plan.
N.F. denotes Near Face, F.F. denotes Far Face, and E.F. denotes Each Face.
For Wingwall Details, see Sh. 304.
For Sections E-E, F-F, G-G, and H-H, see Sh. 304.
For Roadway and Curb End Finish Details, see sh 325 and Std. Drwg. SD-1-69, Sh. No. 142.
Provide 3" clearance to reinforcing steel in footing, minimum.

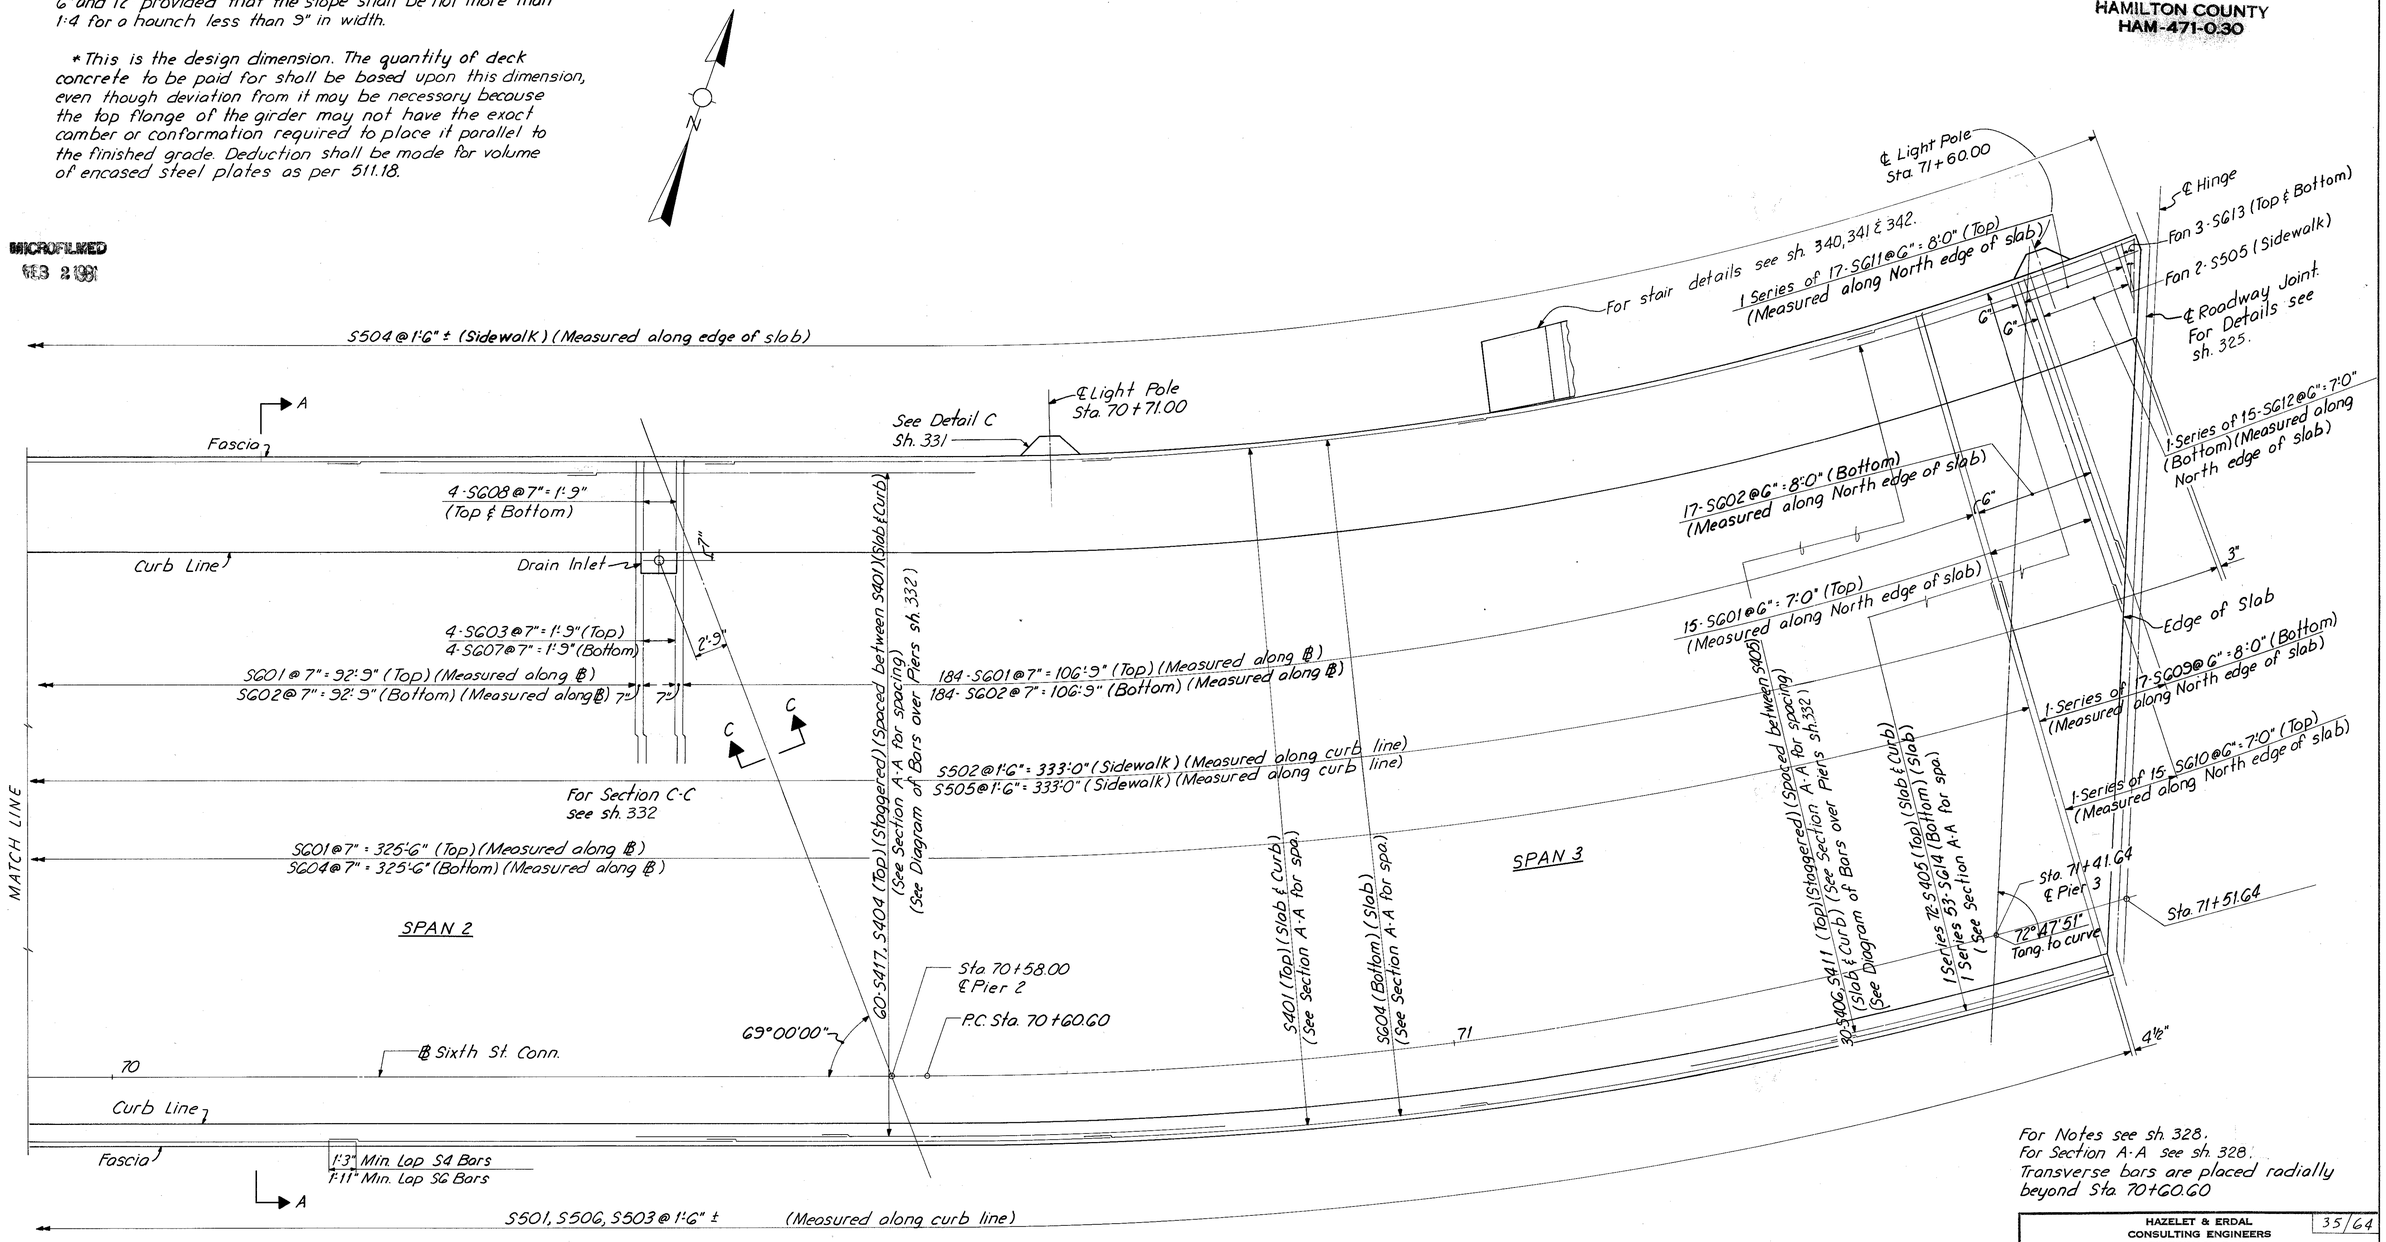
**A haunch width of 9" shall be used for computing quantity of concrete. However, the haunch width may vary between 6" and 12" provided that the slope shall be not more than 1:4 for a haunch less than 9" in width.

*This is the design dimension. The quantity of deck concrete to be paid for shall be based upon this dimension, even though deviation from it may be necessary because the top flange of the girder may not have the exact camber or conformation required to place it parallel to the finished grade. Deduction shall be made for volume of encased steel plates as per 511.18.



For Notes see sh. 328.
For Section A-A see sh. 328.
Transverse bars are placed radially beyond Sta. 70+60.60

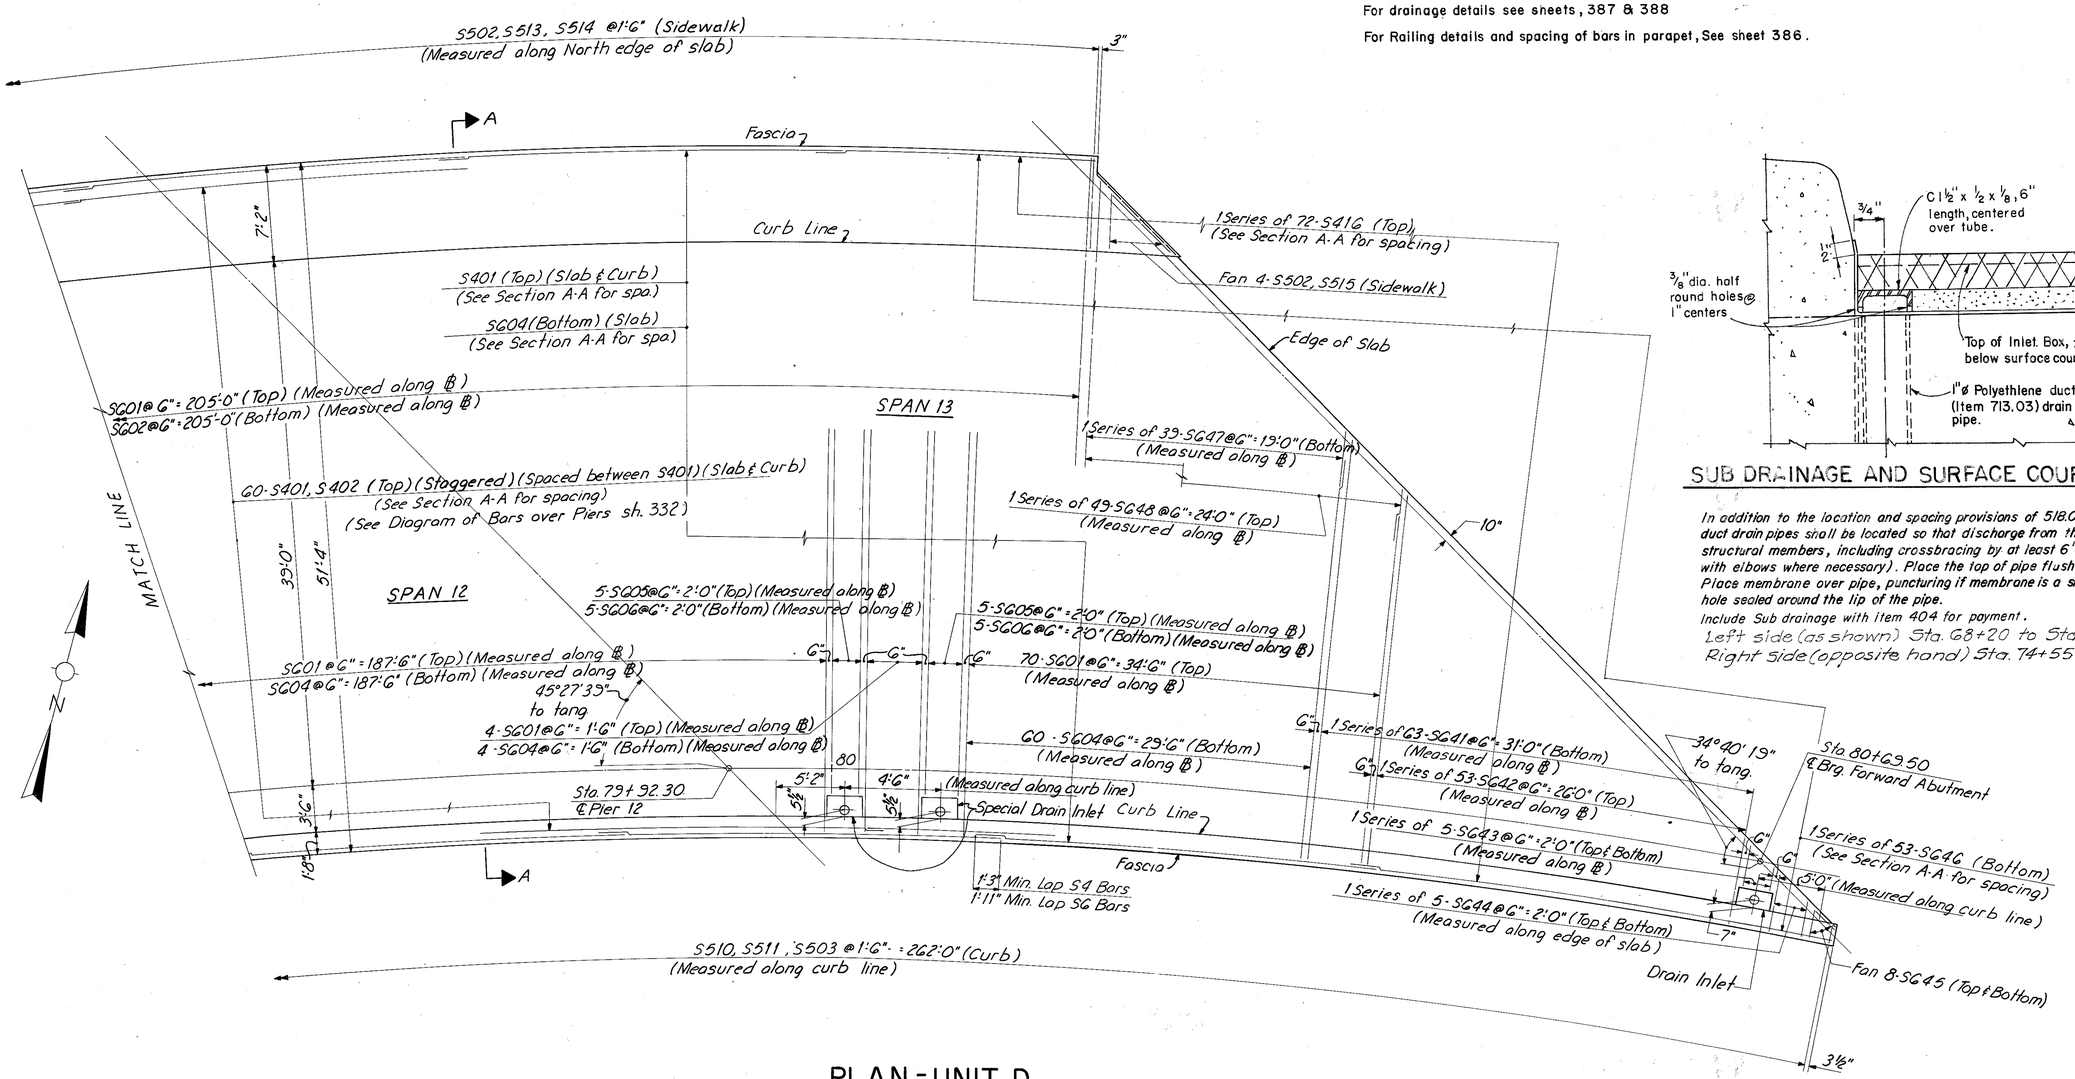
NOTES:

Transverse reinforcing bar in Spans 1 thru 5 are to be placed radially.

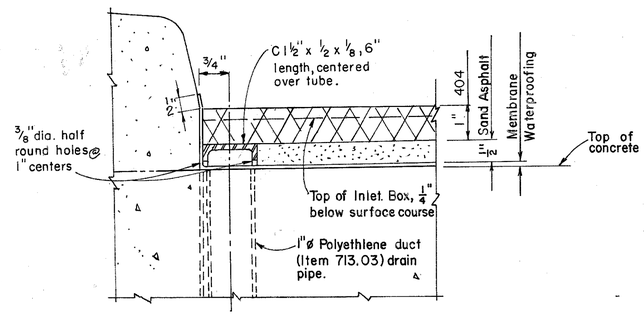
Longitudinal bars are placed parallel to the curvature of the roadway in spans 1 thru. 4. Field bend longitudinal bars where necessary to miss inlets.

For drainage details see sheets, 387 & 388

For Railing details and spacing of bars in parapet, See sheet 386.



PLAN - UNIT D
(Parapets not shown)



SUB DRAINAGE AND SURFACE COURSE DETAILS

In addition to the location and spacing provisions of 518.07, the Polyethlene duct drain pipes shall be located so that discharge from them will clear all structural members, including crossbracing by at least 6" (use drain pipes with elbows where necessary). Place the top of pipe flush with concrete surface. Place membrane over pipe, puncturing if membrane is a sheet type with the hole sealed around the lip of the pipe.

Include Sub drainage with item 404 for payment.

Left side (as shown) Sta. 68+20 to Sta. 74+55.
Right side (opposite hand) Sta. 74+55 to Sta. 80+70.

For Notes see sh. 328.
For Section A-A see sh. 328.
Transverse bars are placed radially.

PLAN

Notes:
F denotes Front Railing.
B denotes Back Railing.
All Handrail materials including anchor bolts shall be galvanized steel.
Railing shall be fabricated from steel pipe meeting the requirements of ASTM Designation A53.
The installed handrails shall be free from burrs or sharp projections.
Work with Pier 3 Details sh. 310.
Provide 1" clearance between ends of 3"ϕ railing pipe at each post.
Work this sheet with sh. 341 & 342.
Horizontal dimensions used to calculate the quantity for Item 517, Galvanized Steel Handrail.

GENERAL NOTES

REFERENCE: SHALL BE MADE TO STANDARD DRAWINGS BS-1-67 REVISED 6-12-69, SD-1-69, SHEETS 1 AND 2 DATED 6-12-69, BR-1-67, SHEET 1 REVISED 10-15-71, RB-1-55 REVISED 2-2-59, AND TO SUPPLEMENTAL SPECIFICATIONS 808 DATED 1-1-71, 836 DATED 1-1-71, 838 DATED 3-18-70 AND 927 DATED 1-1-71.

DESIGN SPECIFICATIONS: THIS STRUCTURE CONFORMS TO "STANDARD SPECIFICATIONS FOR HIGHWAY BRIDGES" ADOPTED BY THE AMERICAN ASSOCIATION OF STATE HIGHWAY OFFICIALS, 1969, INCLUDING THE OHIO "SUPPLEMENT" TO THESE SPECIFICATIONS.

DESIGN DATA: DESIGN LOADING - HS20-44 AND THE INTERSTATE ALTERNATE LOADING.

CONCRETE CLASS C- UNIT STRESS 1200 P.S.I. FOR SUPERSTRUCTURE
UNIT STRESS 1333 P.S.I. FOR SUBSTRUCTURE

STRUCTURAL STEEL - ASTM A36-UNIT STRESS 20,000 P.S.I.

REINFORCING STEEL - ASTM A615, AND A616 OR A617 - UNIT STRESS 20,000 P.S.I.
IF BARS IN ACCORDANCE WITH ASTM A616 ARE PROVIDED, THEY SHALL BE SUBJECT TO BEND TESTS AS PER AASHO DESIGNATION M42-70.

EMBANKMENT CONSTRUCTION: THE EMBANKMENT SHALL BE CONSTRUCTED TO THE LEVEL OF THE SUBGRADE BETWEEN THE FORWARD ABUTMENT FOR BRIDGE NO. HAM-471-0047 AND THE REAR ABUTMENT FOR BRIDGE NO. HAM-471-RAMP A OFF COLUMBIA VIADUCT. EXCAVATION SHALL THEN BE MADE FOR THE FORWARD ABUTMENT AND RETAINING WALL NO. 16.

PILES: SHALL BE DRIVEN TO A MINIMUM BEARING CAPACITY OF 40 TONS PER PILE FOR THE REAR ABUTMENT AND PIER 1, AND 50 TONS PER PILE FOR THE REMAINING SUBSTRUCTURES.

METAL JOINT WITH PREFORMED ELASTIC JOINT SEALER: DESCRIPTION - THIS WORK SHALL CONSIST OF THE MANUFACTURE OF SHOP PREFABRICATED JOINT SYSTEMS AS SHOWN ON THE PLANS. THE PREFABRICATED JOINT SHALL BE CONSTRUCTED OF STRUCTURAL STEEL SECTIONS, WITH PREFORMED ELASTIC JOINT SEALERS SECURELY BONDED IN PLACE.

THE METAL SURFACES IN DIRECT CONTACT WITH THE POLYCHLOROPRENE SEALERS SHALL BE SAND BLASTED AND PROPERLY TREATED (SO AS TO PROVIDE A HIGH STRENGTH BOND BETWEEN THE SEAL AND MATING METAL SURFACES). THEN THE SEALER SHALL BE SECURELY BONDED TO THE METAL WITH AN APPROVED ADHESIVE.

ALL STEEL COMPONENTS OF THE ASSEMBLY EXCEPT THOSE AREAS NOTED ABOVE WHICH ARE IN CONTACT WITH THE SEALERS SHALL BE PAINTED IN ACCORDANCE WITH SECTION 514.

MATERIALS - PHYSICAL PROPERTIES OF PREFORMED ELASTIC JOINT SEALER AND LUBRICANT ADHESIVE - SEE SECTION 705.11.

STEEL COMPONENTS - ASTM A36.

BASIS OF PAYMENT - THE CONTRACT UNIT PRICE PER LINEAL FOOT BID FOR ITEM 516, METAL JOINT WITH PREFORMED ELASTIC JOINT SEALER SHALL BE FULL PAYMENT FOR ALL STRUCTURAL STEEL, POLYCHLOROPRENE SEALERS, ADHESIVES, PAINT AND ALL LABOR AND MATERIALS NECESSARY TO FABRICATE AND INSTALL THE JOINTS IN ACCORDANCE WITH THE PLANS AND SPECIFICATIONS.

UTILITY LINES: ALL EXPENSE INVOLVED IN RELOCATING (INSTALLING) THE AFFECTED UTILITY LINES SHALL BE BORNE BY THE OWNER(S). THE CONTRACTOR AND OWNER(S) ARE REQUESTED TO COOPERATE BY ARRANGING THEIR WORK IN SUCH A MANNER THAT INCONVENIENCE TO EITHER WOULD BE HELD TO A MINIMUM.

DECK REINFORCING BARS: AT THE CONTRACTOR'S OPTION, A PORTION (NOT TO EXCEED 25%) OF THE UPPER LONGITUDINAL BARS (S 4--) IN THE DECK SLAB MAY BE PLACED BENEATH THE UPPER TRANSVERSE BARS FOR SUPPORT OF THE TOP MAT.

MAINTENANCE OF TRAFFIC: REFER TO SHEETS 13 AND 13A.

Dimensions & Reinforcing steel shown are Typical all footings this pier.

Notes:
All piles shall be 12" Cast-in-Place Reinforced Concrete.

Special care shall be taken in placing reinforcing steel in the cap so that it will not interfere with the drilling of Anchor Bolt holes.

For connection of downspouts to piers, see sheet 388.

Clearance shall be 3 inches minimum to all surfaces of the footings & 2 inches minimum elsewhere, for reinforcing steel.

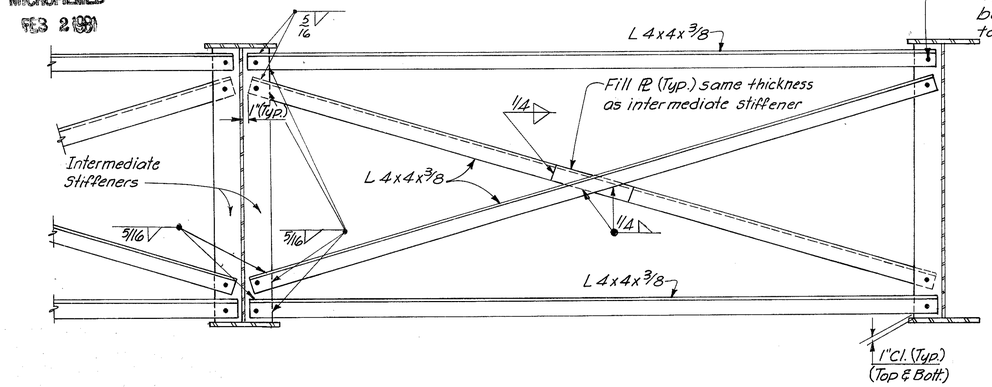
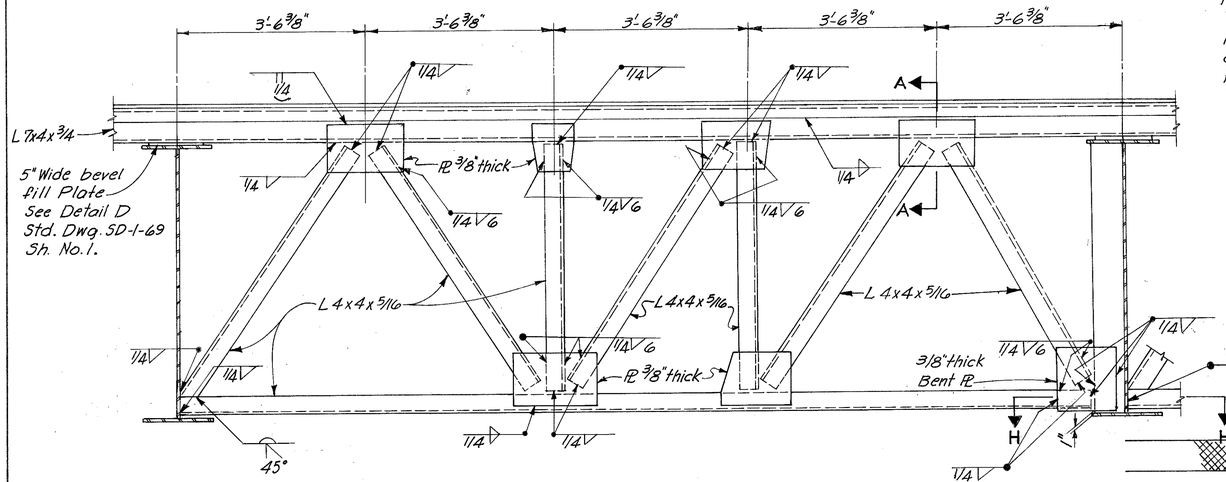
Provide 11/16 ϕ holes for 5/8" ϕ bolts in crossframe angles and stiffener plates, which are to be field connected before welding. If 5/8" ϕ bolts are to be left in place, they shall be tack welded.

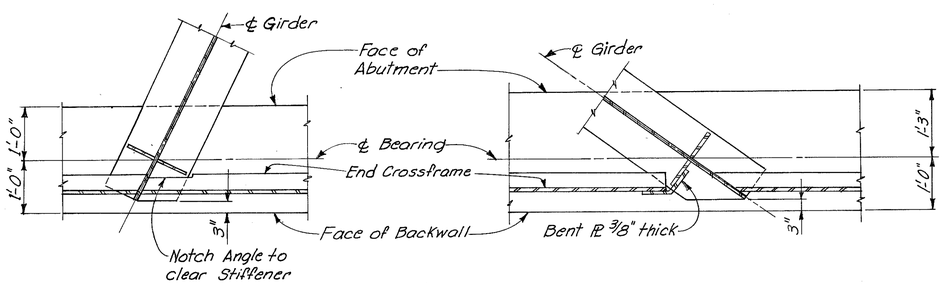
Elevations shown are at top of steel (1/4" below top of roadway.)



CROSSFRAME TYPE A

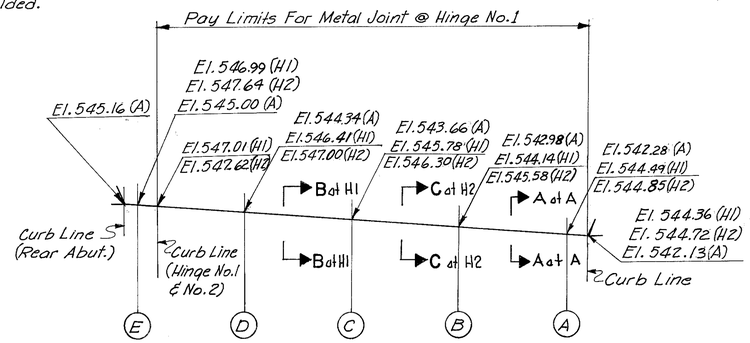


END CROSSFRAME TYPE B- FORWARD ABUTMENT



DETAIL A

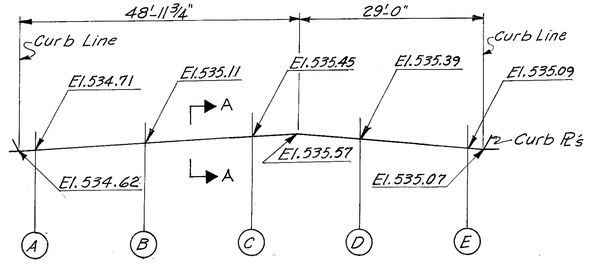
SECTION H-H



EXPANSION JOINT CROSS SECTION

Note: A= Rear Abut., H1= ℄ Hinge No. 1, H2= ℄ Hinge No. 2.

For Curb Plate Details at Rear Abut. and Hinge No. 2 See Std. Dwg. SD-1-69 Sh. No. 2. For Section B-B see Sh. 382



EXPANSION JOINT CROSS SECTION AT FORWARD ABUTMENT

For Curb Plate Details see Std. Drwg SD-1-69 Sh 2.
1/2"x 2"x 18" anchor bars for end dams as shown on Std. Drwg SD-1-69 Sh 1 should be revised to be 5 5/8" clear from top of steel as shown below.

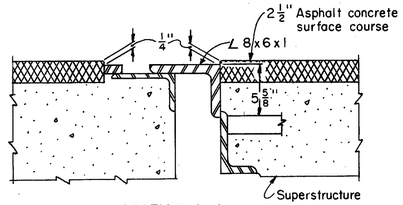
SECTION C-C

At Bend Line 6- Hinge No. 2
(For other Details see Std. Dwg. SD-1-69 Sh. No. 1, Section A-A)
All Structural Steel shown in Section C-C to be included in Item 513, "Structural Steel" for payment.



SECTION A-A

(For details not shown see SD-1-69 sheet 1)
Provide 3" beveled bar at both ends of bridge regardless of grade.

Note:
For Typical Structural Steel Details see Sh. 468

Expansion Joints shall be bent in the shop to conform to the contour of the roadway slab.

* This is the design dimension. The quantity of deck concrete to be paid for shall be based upon this dimension, even though deviation from it may be necessary because the top flange of the girder may not have the exact camber or conformation required to place it parallel to the finished grade. Deduction shall be made for volume of encased steel plates as per Sec. 511.18 of the Construction and Material Specifications.

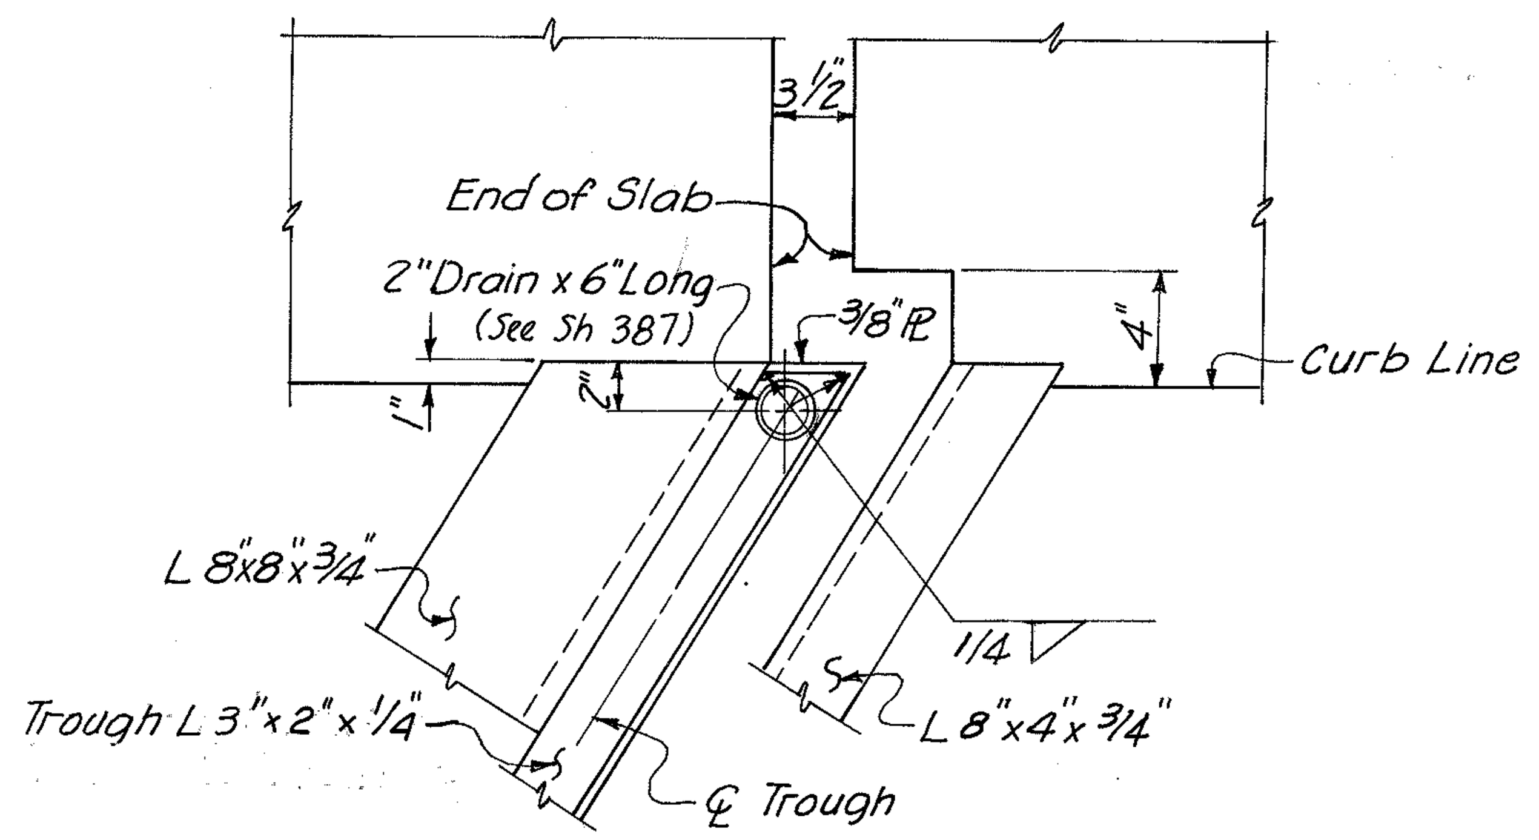
○ Indicates bars over piers

Notes:
Transverse reinforcing bars in Spans 1 thru 5 are to be placed radially.

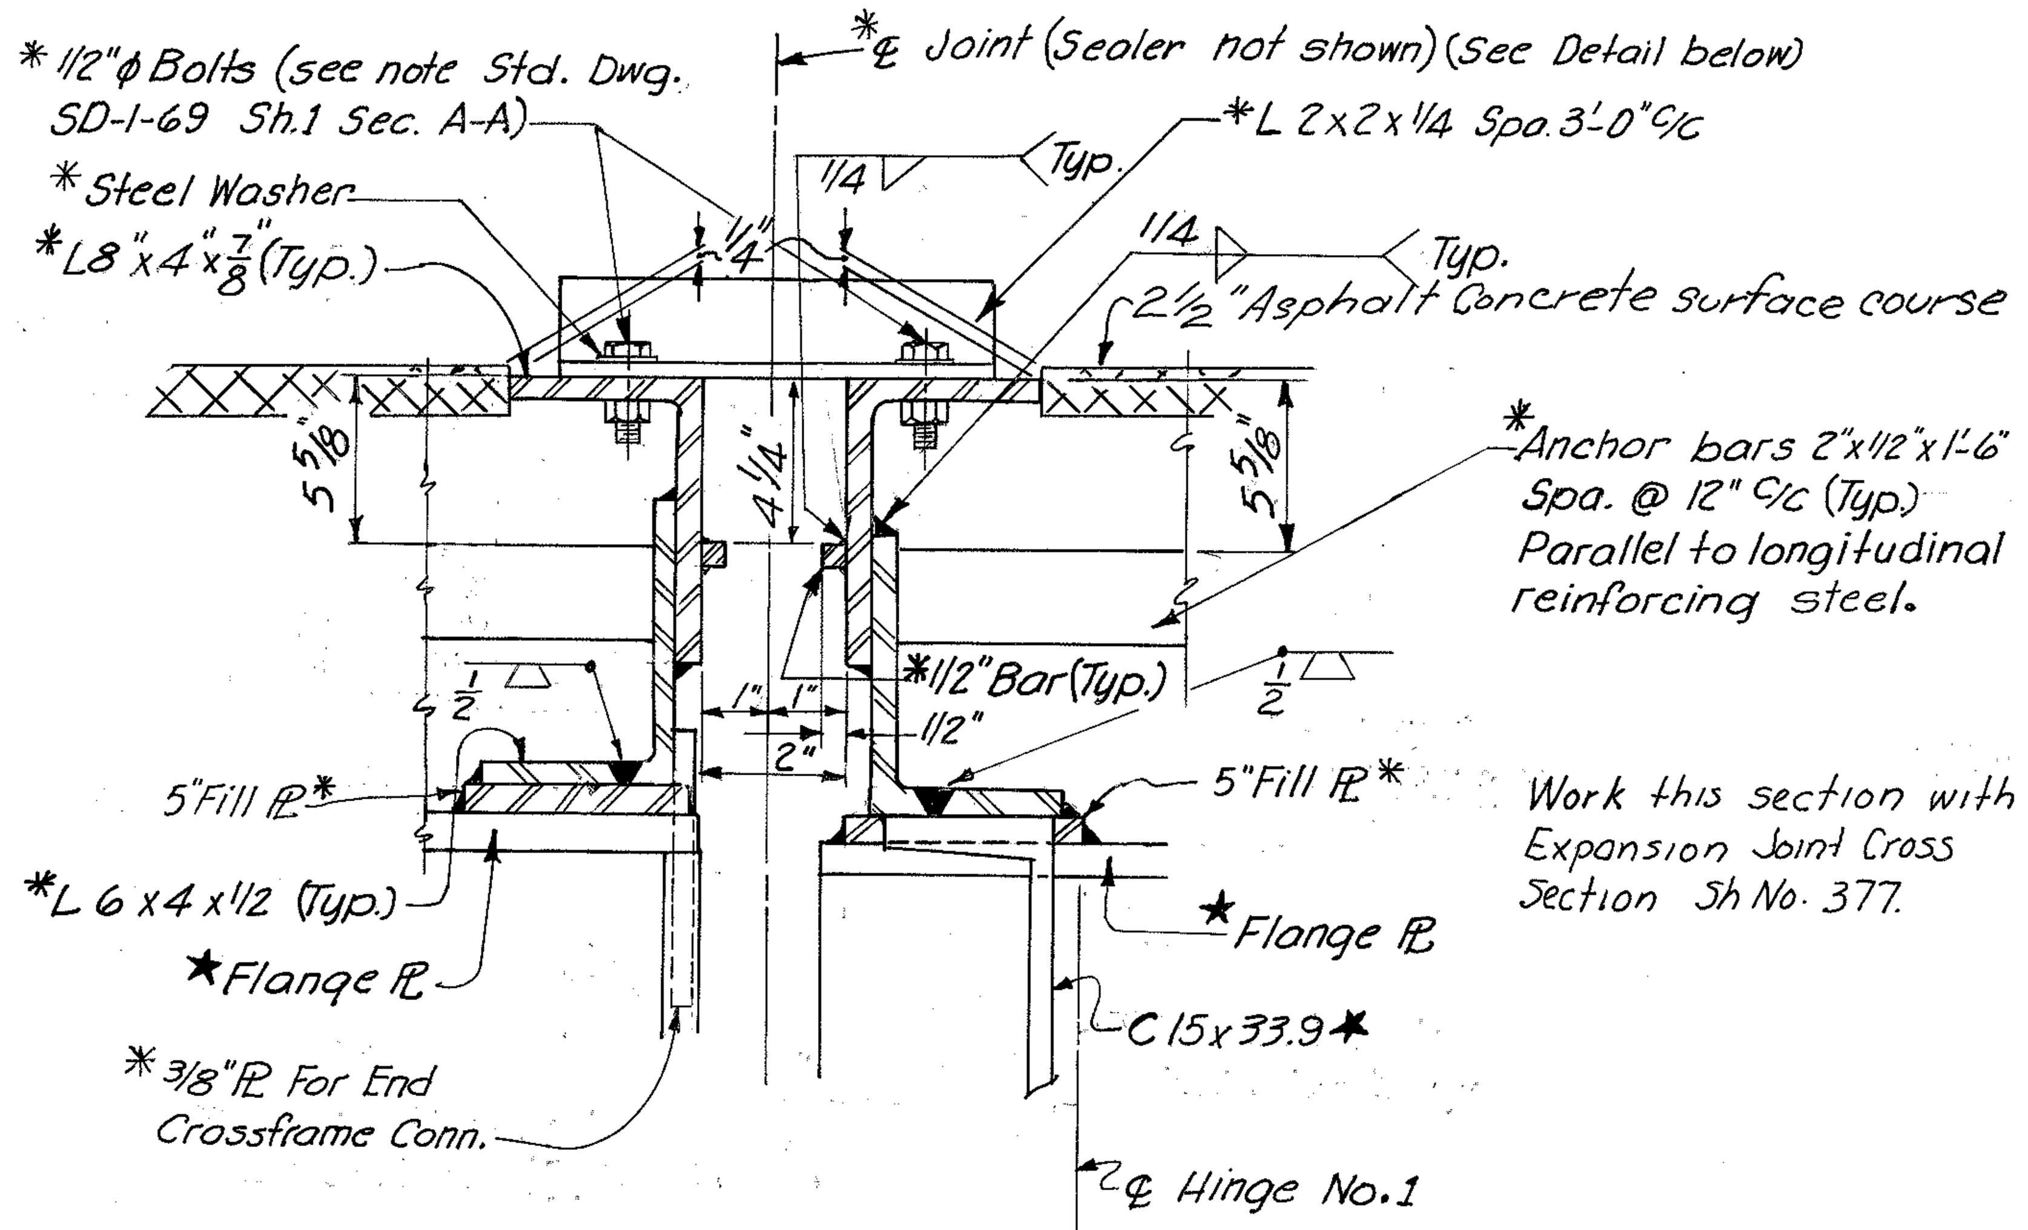
Longitudinal bars are placed parallel to the curvature of the roadway in Spans 1 through 4.
Field bend longitudinal bars where necessary to miss Inlets.

For drainage details see sheets 387 & 388

For Railing details and spacing of bars in parapet see Sheet 386



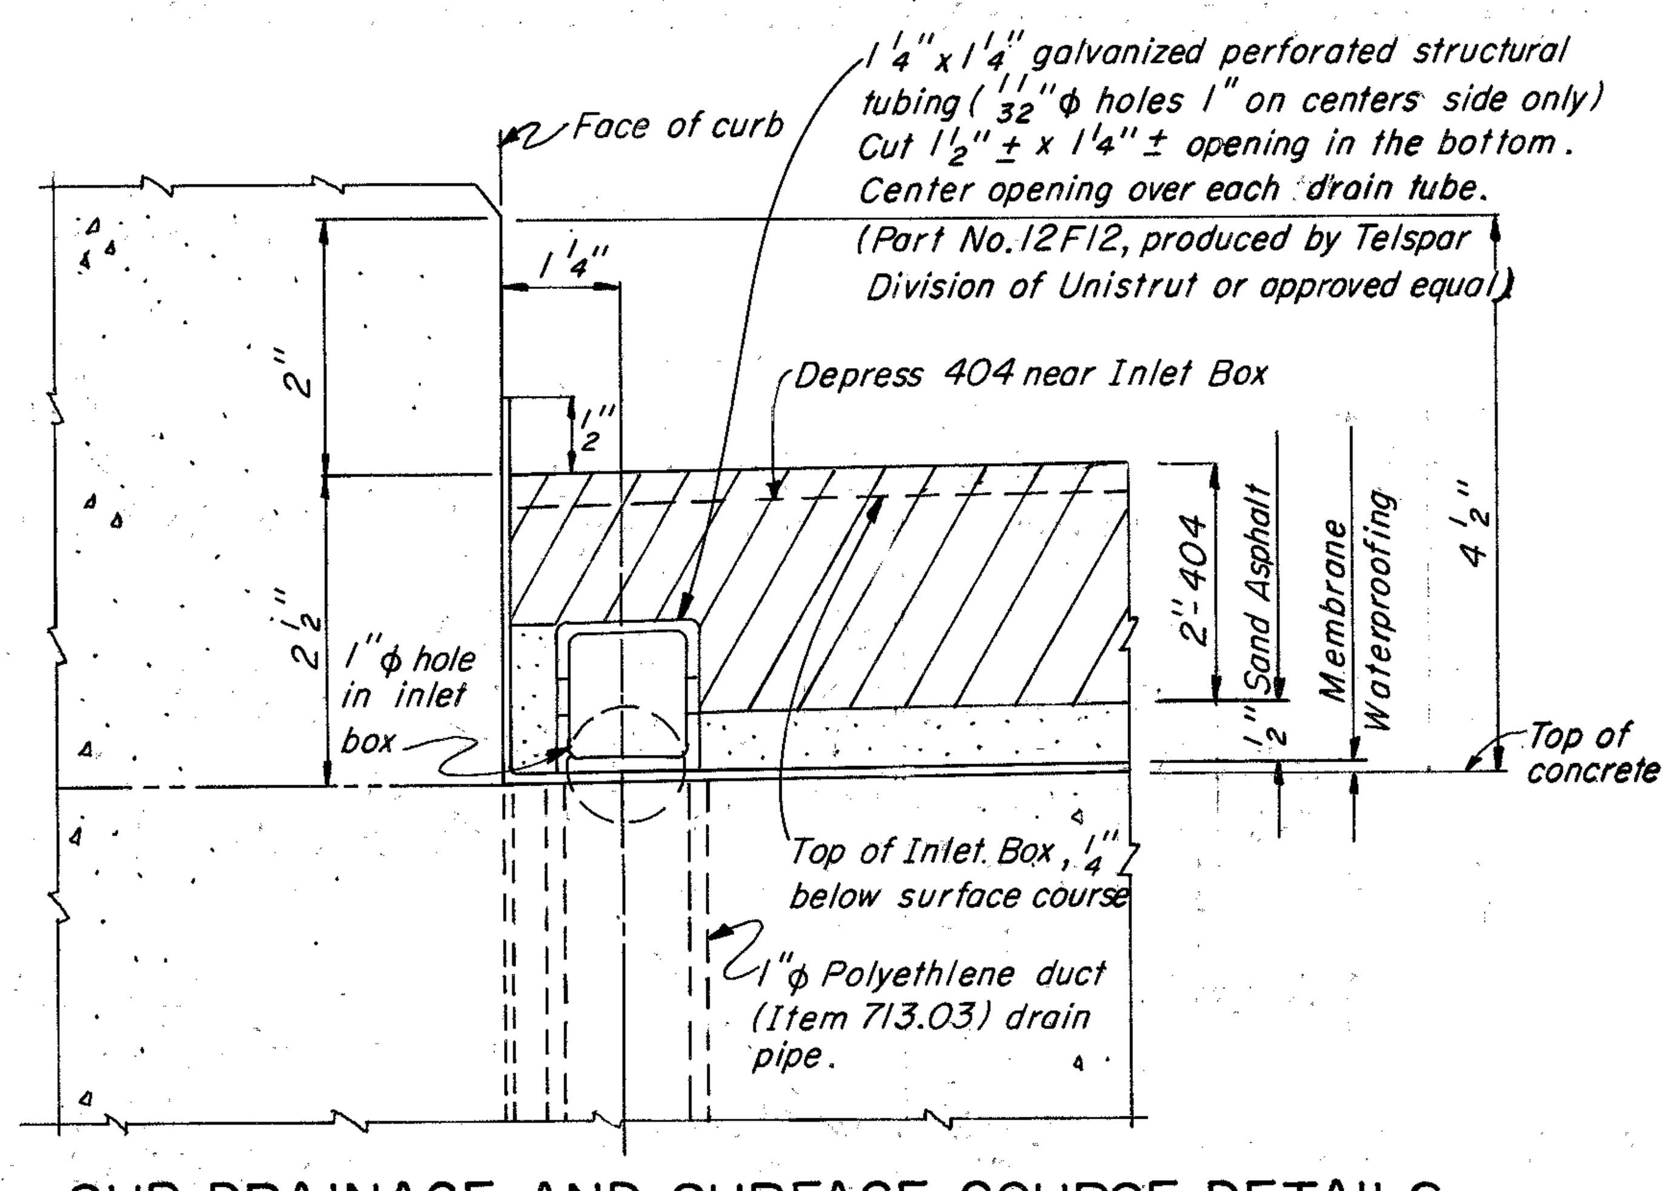
DETAIL C



All items shown with an asterisk (*) shall be included in Item 516, "Metal Joint with Preformed Elastic Joint Sealer" for payment.

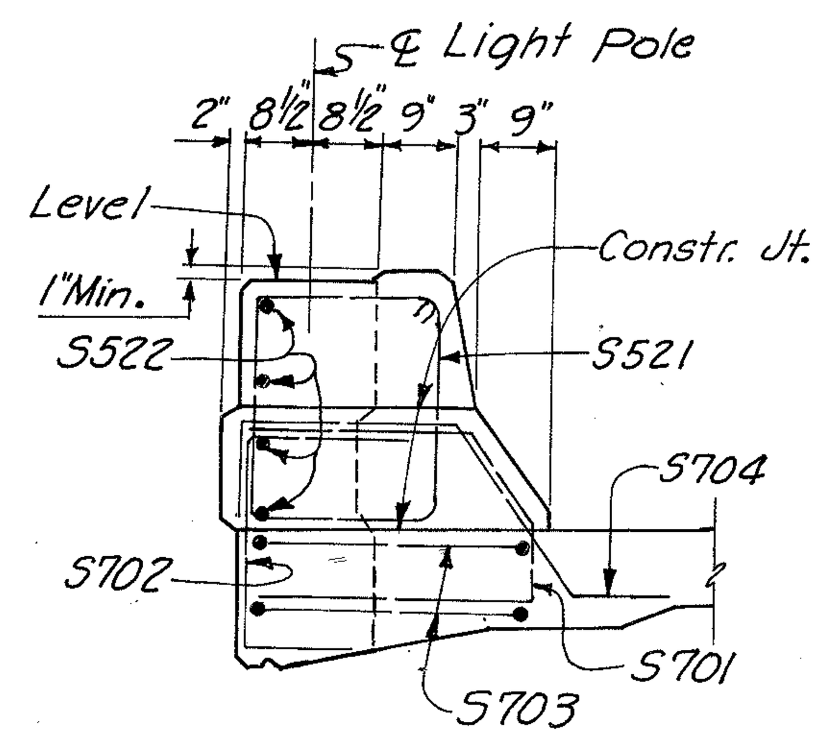
All items shown with a star (★) shall be included in Item 513, "Structural Steel" for payment.

SECTION B-B
At Bend Line 1 – Hinge No. 1

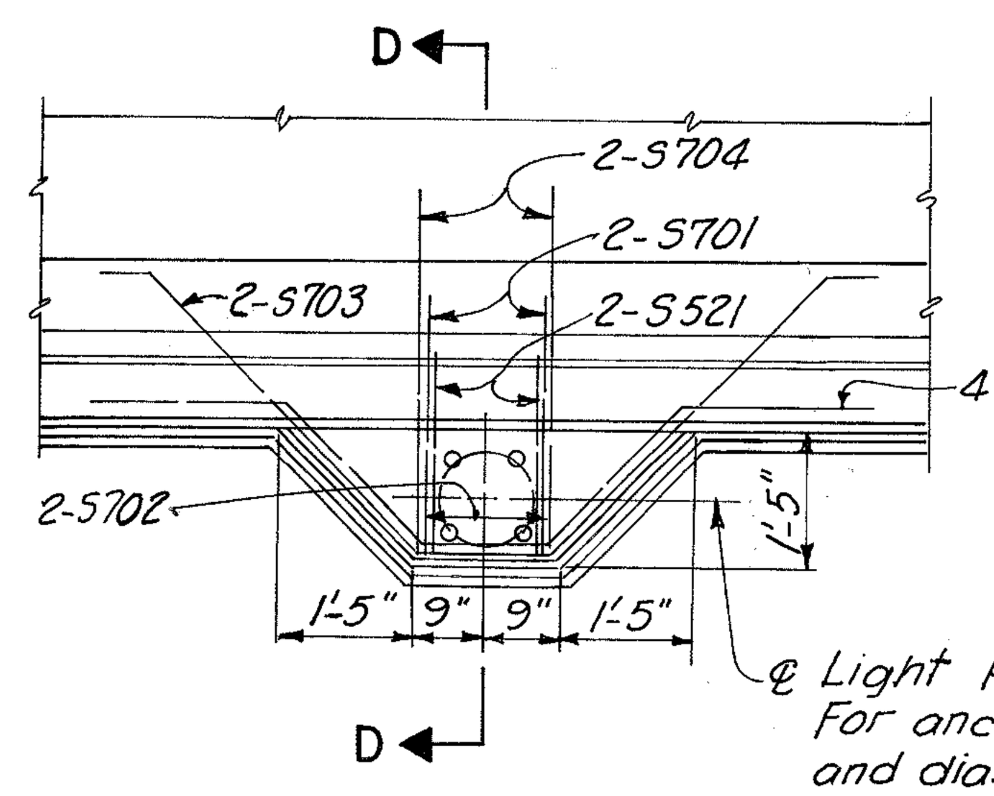


SUB DRAINAGE AND SURFACE COURSE DETAILS

In addition to the location and spacing provisions of 518.07, the Polyethlene duct drain pipes shall be located so that discharge from them will clear all structural members, including crossbracing by at least 6" (use drain pipes with elbows where necessary). Place the top of pipe flush with concrete surface. Place membrone over pipe, puncturing if membrane is a sheet type with the hole sealed around the lip of the pipe. Openings in the bottom of the structural tube may be cut in the field to match drain tube locations.
Include Sub drainage with item 404 for payment.



SECTION D-D



℄ Light Pole
For anchor bolt size and dia. of bolt circle see Lighting Plans, Sh. No. 154
Anchor bolts shall be included with Item 625 for payment.
Additional references, see Sh. Nos. 143, 144 and 155C.

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS-1-67 revised 6-12-69, SD-1-69, Sheets 1 and 2 dated 6-12-69, BR-1-67, Sheet 1 revised 10-15-71, RB-1-55 revised 2-2-59, and and to Supplemental Specifications 808 dated 1-1-71, 836 dated 1-1-71, and 927 dated 1-1-71.

DESIGN SPECIFICATIONS: This structure conforms to "Standard Specifications for Highway Bridges" adopted by the American Association of State Highway Officials, 1969, including the Ohio "Supplement" to these specifications.

DESIGN DATA: Design Loading - HS20-44 "and the Interstate Alternate Loading"

Concrete Class C - unit stress 1200 psi. for superstructure
unit stress 1333 psi. for substructure

Structural Steel - ASTM A36 - unit stress 20,000 psi.

Reinforcing Steel - ASTM A615, A616 or A617 - unit stress 20,000 psi.
Spiral reinforcement may be plain bars ASTM A82, A306, A499 or A615. If bars in accordance with ASTM A616 are provided, they shall be subject to bend tests as per AASHO Designation M42-70.

FOUNDATION BEARING PRESSURE: North Abutment footing is designed for a maximum bearing pressure of 2.0 tons per sq.ft.

PILES shall be driven to firm contact with bedrock. If the length of penetration is approximately equal to the depth to bedrock according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in 507.05 is not less than the following value for a pile hammer of the indicated energy rating:

45 tons per pile using an 11,000 ft. lb. hammer
40 tons per pile using a 15,000 ft. lb. or greater hammer

If the energy rating of the hammer is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 35 tons per pile.

UTILITY LINES: All expense involved in relocating (installing) the affected utility lines shall be borne by the Owner(s). The Contractor and Owner(s) are requested to cooperate by arranging their work in such a manner that inconvenience to either would be held to a minimum.

SOUTH ABUTMENT: Portions of the South Abutment have been constructed under a previous contract. It shall be the responsibility of the Contractor to determine the existing bridge seat elevations. The Contractor shall revise, if necessary, the proposed heights of the bearing details, and shall grind, if necessary, the existing concrete areas underneath the proposed masonry plates, in order to provide a level bearing surface.

The cost of this work shall be considered as included in the unit price bid for Item 513, "Structural Steel".

DECK REINFORCING BARS: AT THE CONTRACTOR'S OPTION, A PORTION (NOT TO EXCEED 25%) OF THE UPPER LONGITUDINAL BARS (S4__) IN THE DECK SLAB MAY BE PLACED BENEATH THE UPPER TRANSVERSE BARS FOR SUPPORT OF THE TOP MAT.

MAINTENANCE OF TRAFFIC - REFER TO SHEETS 13 AND 13A

SECTION C-C

SECTION B-B

PLAN

(Parapet Not Shown)

* This is the design dimension. The quantity of deck concrete to be paid for shall be based upon this dimension, even though deviation from it may be necessary because the top flange of the girder may not have the exact camber or conformation required to place it parallel to the finished grade. Deduction shall be made for volume of encased steel plates as per 511.18.

** A haunch width of 9" shall be used for computing quantity of concrete. However, the haunch width may vary between 6" and 12" provided that the slope shall be not more than 1:4 for a haunch less than 9" in width.

SUB DRAINAGE AND WEARING COURSE DETAILS
AT PARAPET AND NOSING

In addition to location and spacing provisions of 518.07, the polyethylene duct drain pipes shall be located so that discharge from them will clear all structural members including crossbracing by at least 6". Place the top of the pipes flush with the concrete surface. Place membrane over pipes, puncturing if membrane is a sheet type, with the hole sealed around the lip of the pipe. Include Subdrainage with Item 404, Asphalt Concrete for payment.

Note:
Elevations are final top of surface course elevations.
Elevations are given at ℄ of Piers, Brgs, and ¼ points of Girder spans.

QUANTITIES
BY ALT DATE 3-29-71
CHECKED RJF DATE 3-31-71

GENERAL NOTES

REFERENCE — shall be made to Standard Drawings AS-1-67 revised 6-12-69, SD-1-69, Sheets 1 and 2 dated 6-12-69, BR-1-67, Sheet 1 revised 10-15-71, RB-1-55 revised 2-2-59, and and to Supplemental Specifications 808 dated 1-1-71, and 836 dated 1-1-71.

DESIGN SPECIFICATIONS: This structure conforms to "Standard Specifications for Highway Bridges" adopted by The American Association of State Highway Officials, 1969, including the Ohio "Supplement" to these specifications.

DESIGN DATA:

Design Loading - HS20-44 "and the Interstate Alternate Loading"

Concrete Class C - unit stress 1200 psi. for superstructure
unit stress 1333 psi. for substructure

Structural Steel - ASTM A36- unit stress 20,000 psi.

Reinforcing Steel - ASTM A 615, A616 or A617 - unit stress 20,000 psi.

Spiral reinforcement may be plain bars ASTM A82, A306, A499 or A615. If bars in accordance with ASTM A616 are provided they shall be subject to bend tests as per AASHO Designation M42-70.

PILES shall be driven to firm contact with bedrock. If the length of penetration is approximately equal to the depth to bedrock according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in 507.05 is not less than the following value for a pile hammer of the indicated energy rating:

For the Rear Abutment and Piers 1 thru 4

55 tons per pile using an 11,000 ft. lb. hammer
50 tons per pile using a 15,000 ft. lb. or greater hammer

For Pier 5

60 tons per pile using an 11,000 ft. lb. hammer
55 tons per pile using a 15,000 ft. lb. or greater hammer

If the energy rating of the hammer is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 40 tons per pile for the Rear Abutment and Piers 1 thru 4 piles and 35 tons per pile for Pier 5 piles.

UTILITY LINES: All expense involved in relocating (installing) the affected utility lines shall be borne by the Owner(s). The Contractor and Owner(s) are requested to cooperate by arranging their work in such a manner that inconvenience to either would be held to a minimum.

CONSTRUCTION CLEARANCE of 19'-0" vertically above the top of the railroad rails and 8'-0" horizontally from the center of tracks shall be maintained at all times.

DECK REINFORCING BARS: At the Contractor's option, a portion (not to exceed 25%) of the upper longitudinal bars (S4) in the deck slab may be placed beneath the upper transverse bars for support of the top mat.

MAINTENANCE OF TRAFFIC - Refer to sheets 13 and 13A

PLAN

TRANSVERSE SECTION A-A

* This is the design dimension. The quantity of deck concrete to be paid for shall be based upon this dimension, even though deviation from it may be necessary because the top flange of the girder may not have the exact camber or conformation required to place it parallel to the finished grade. Deduction shall be made for volume of encased steel plates as per 511.18.

** A Typical Haunch Width of 9" shall be used for computing quantity of concrete. However, the haunch width may vary between 6" and 12" provided that the slope shall be not more than 1:4 for a haunch less than 9" in width.

Notes: For Drainage Details, see Sh. 433.
Cut or field bend longitudinal reinforcing steel to miss drain inlets.

SUBDRAINAGE AND WEARING COURSE DETAILS

In addition to the location and spacing provisions of 518.07, the polyethylene duct drain pipes shall be located so that discharge from them will clear all structural members, including crossbracing by at least 6". Place the top of the pipe flush with the concrete surface. Place membrane over pipe, puncturing if membrane is a sheet type, with the hole sealed around the lip of the pipe.

Include Subdrainage with item 404, Asphalt Concrete, for payment.

SPIRALS - Core Diameter 38" %
- Pitch 4½" %
- Other Details in Accordance with CRSI Standard Practice

Total Weight (Piers) = 65,567 lbs

REPLACEMENT BARS

MARK	TYPE	NUMBER	LENGTH
RE401	Str.	2	6'-3"
RE501	Str.	2	6'-7"
RE601	Str.	2	6'-11"
RE701	Str.	5	7'-2"
RE801	Str.	1	7'-6"
RE901	Str.	1	7'-10"
RE1101	Str.	2	8'-6"

NOTES:

Bar size is indicated in the bar mark. The first digit where three digits are used, and the first two digits where four are used, indicate the bar size number. For example, A501 is a No. 5 size bar and P1101 is a No. 11 size bar.

For bar bending schedule see sheet No. TD/3

Total weight of reinforcing steel equals 222,078 lbs.

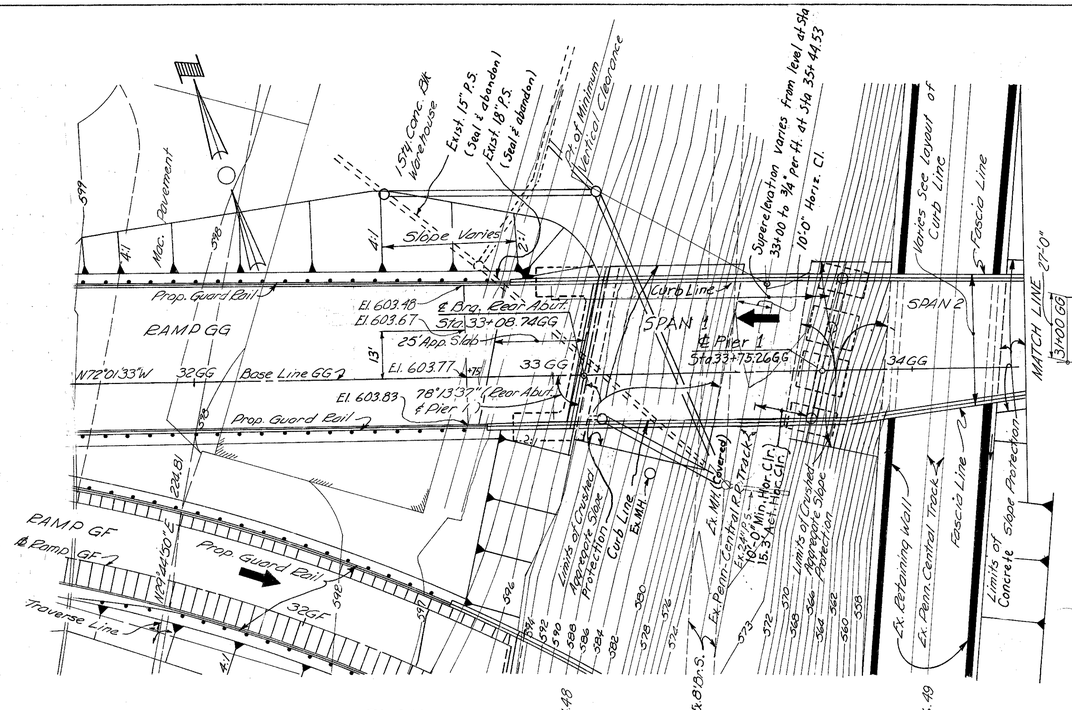
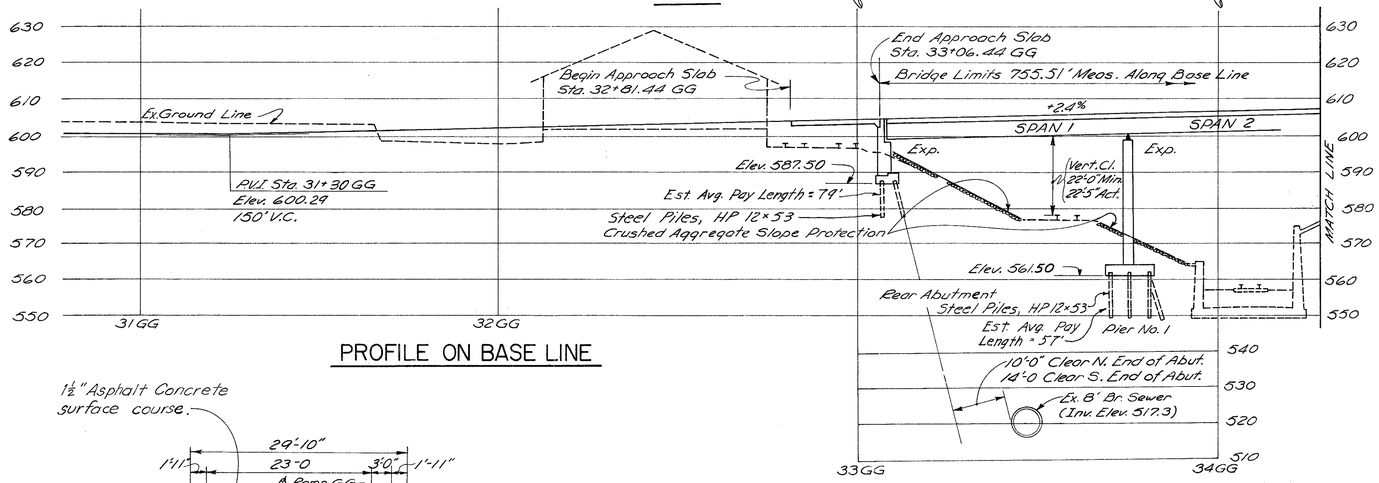
The Vertical curve data does not apply to bridge or graphic curve elevations. The bridge elevations were obtained by adding 1½" to elevations obtained from vertical curve data.

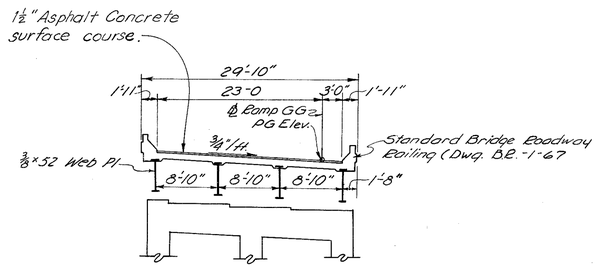


LAYOUT OF CURB LINES

PLAN



PROFILE ON BASE LINE



SECTION A-A
For location of Section see Sh. No. 437.

NOTE
Piers 6, 7, 8, 9, and the footings only for Pier No. 3 as shown on Sheet 2 have been constructed under a previous contract. The remaining substructure units, and all superstructure shall be constructed under this contract.

NOTE
For Design Specifications, Proposed Structure Data and Notes see Sheet 437.

** Includes 104 pounds of bronze.

GENERAL NOTES

REFERENCE shall be made to Standard Drawings AS-1-67 revised 6-12-69, SD-1-69, Sheets 1 and 2 dated 6-12-69, BR-1-67, Sheet 1 revised 10-15-71, RB-1-55 revised 2-2-59, FSB-1-62 revised 1-15-63 and to Supplemental Specifications 808 dated 1-1-71, 836 dated 1-1-71, and 927 dated 1-1-71.

DESIGN SPECIFICATIONS: This structure conforms to "Standard Specifications for Highway Bridges" adopted by the American Association of State Highway Officials, 1969, including the Ohio "Supplement" to these specifications.

DESIGN DATA:

Design Loading - HS20-44 "and the Interstate Alternate Loading"

Concrete Class C - unit stress 1200 psi. for superstructure
unit stress 1333 psi. for substructure

Structural Steel - ASTM A36 - unit stress 20,000 psi.

Reinforcing Steel - ASTM A615, A616 or A617 - unit stress 20,000 psi..
Spiral reinforcement may be plain bars ASTM A82, A306, A499 or A615. If bars in accordance with ASTM A616 are provided they shall be subject to bend tests as per AASHO Designation M42-70.

PILES shall be driven to firm contact with bedrock. If the length of penetration is approximately equal to the depth to bedrock according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in 507.05 is not less than the following value for a pile hammer of the indicated energy rating:

For the Rear Abutment and Pier Piles

55 tons per pile using an 11,000 ft. lb. hammer
50 tons per pile using a 15,000 ft. lb. or greater hammer

For the Forward Abutment

60 tons per pile using an 11,000 ft. lb. hammer
55 tons per pile using a 15,000 ft. lb. or greater hammer

If the energy rating of the hammer is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 40 tons per pile for the Rear Abutment and Pier piles and 35 tons per pile for the Forward Abutment piles.

UTILITY LINES: All expense involved in relocating (installing) the affected utility lines shall be borne by the Owner(s). The Contractor and Owner(s) are requested to cooperate by arranging their work in such a manner that inconvenience to either would be held to a minimum.

PIERS 6,7,8 AND 9 have been constructed under a previous contract. It shall be the responsibility of the Contractor to determine all the existing bridge seat elevations. The Contractor shall revise, if necessary, the proposed heights of the bearing details at Piers 6, 7,8 and 9, and shall grind, if necessary, the existing concrete areas underneath the proposed masonry plates, in order to provide a level bearing surface.

The cost of this work shall be considered as included in the unit price bid for Item 513, "Structural Steel".

DECK REINFORCING BARS: At the Contractor's option, a portion (not to exceed 25%) of the upper longitudinal bars (S4__) in the deck slab may be placed beneath the upper transverse bars for support of the top mat.

MAINTENANCE OF TRAFFIC: Refer to Sheets 13 and 13A.

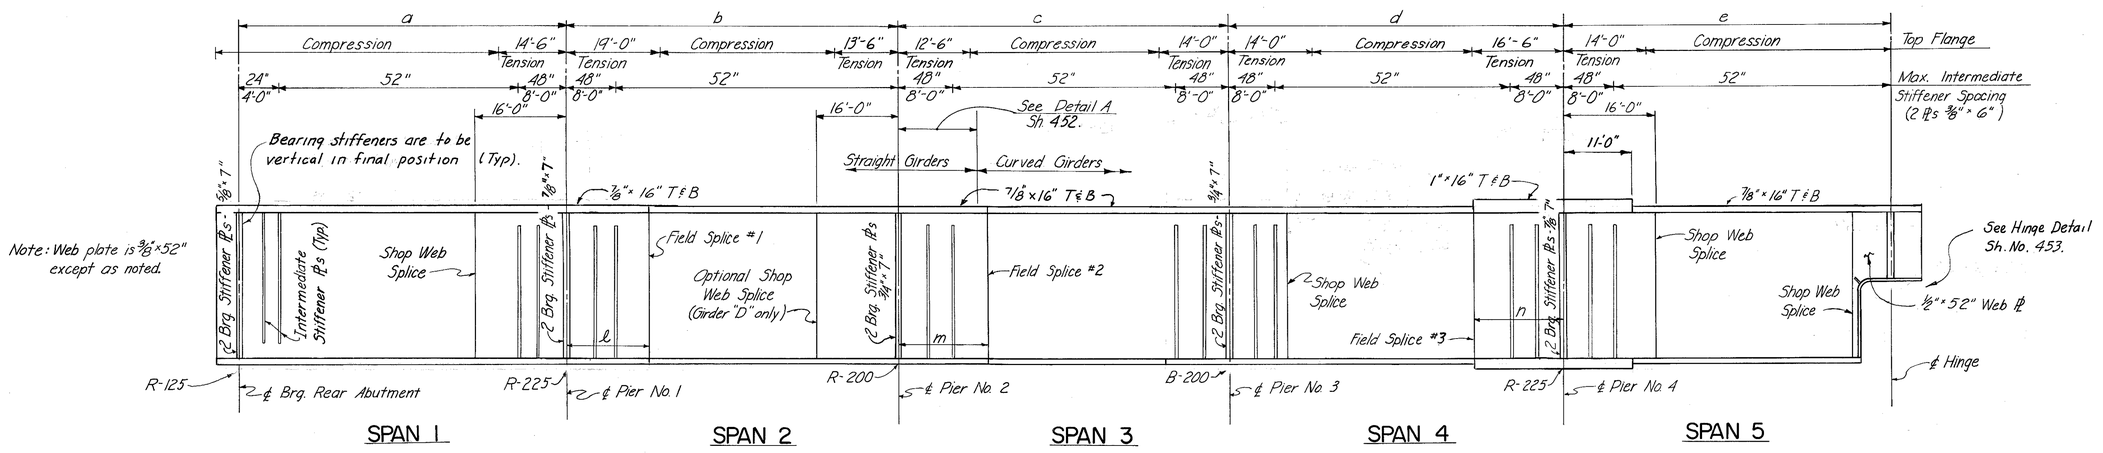
FRAMING PLAN



GIRDER ELEVATION (Developed)

Erection Notes:

Girders to be plumb and in correct horizontal position before crossframes are welded. Complete all welding before placing concrete deck.

Additional shop flange splices may be provided by the contractor, with the approval of the Director as per 513.02. However, no additional flange splices will be permitted within 8'-0" of the ℄ of piers or midpoint of the spans. All flange splices shall miss crossframes and intermediate stiffeners by 1'-0" minimum and shop web splices by 5'-0" minimum.

Notes:

Before any fabrication of structural steel is started, the contractor shall first determine the exact location of the existing piers No. 6, 7, 8, & 9.
For Bearing Details see Std. Dwg. RB-1-55 and FSB-1-62 and Sh. 453.
For Inlet Framing details see Drainage Details Sh. No. 469 and Sh. No. 469.
For treatment of ends of girders and end dam details at abutments see Std. Drwg SD-1-69, Sh 1.

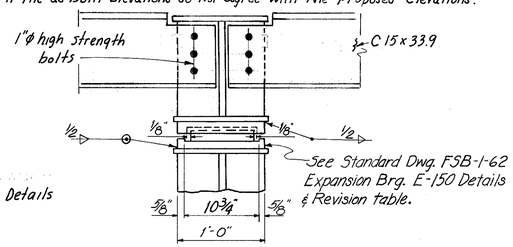
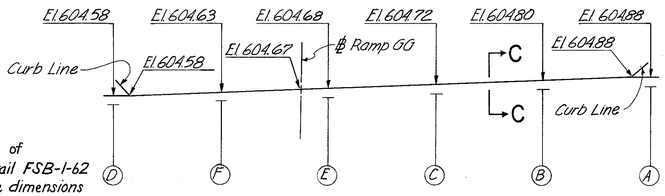
HINGE DETAIL

PIER	PIER BRIDGE SEATS GIRDER A	B	C	D
No. 6	605.13	604.49	603.83	603.17
No. 7	603.20	602.41	601.62	600.76
No. 8	601.98	601.07	600.14	599.12
No. 9	597.93	596.82	595.68	594.40

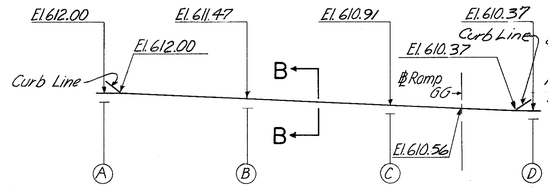
Elevations listed above were proposed elevations for construction of Piers 6, 7, 8, & 9 of Project No. HAM-71-(1.56)(2.51). Dimensions H, K, X & Y listed below for Bearing Detail FSB-1-62 were calculated using these above elevations. However, the Contractor may have to revise dimensions H, K, X & Y if the as built elevations do not agree with the proposed elevations.



SECTION A-A



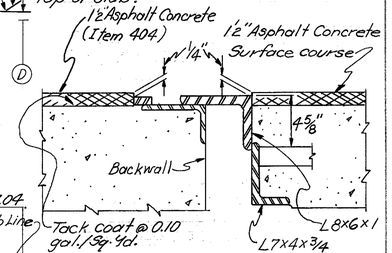
REAR ABUTMENT EXPANSION DAM
(Provide curb plates)

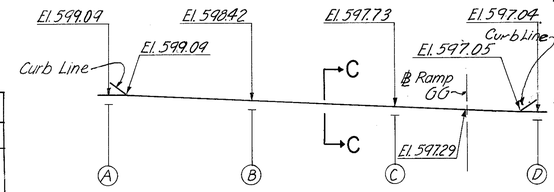


ROADWAY EXPANSION DAM
(Provide curb plates)

Note:
Elevations given @ Abutments are at the back edge of 8" angle.

Expansion dams are to be bent in shop to conform to contour of Top of slab.

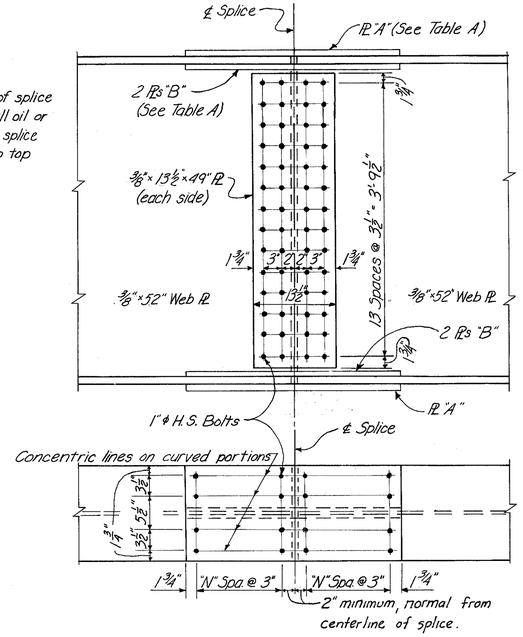




FORWARD ABUTMENT EXPANSION DAM
(Provide curb plates)

For additional details see SD-1-69 Sht 1

SECTION C-C



Note:
Contact surface of splice shall be free from all oil or paint. Bottom flange splice material is identical to top flange material.

FIELD SPLICE

FIELD SPLICE TABLE A			
LOCATION	PL "A"	PL "B"	"N" Spaces
Field Splices #1, 2 & 3	1/2"x16"x19 1/2"	5/8"x7"x19 1/2"	2 Spaces

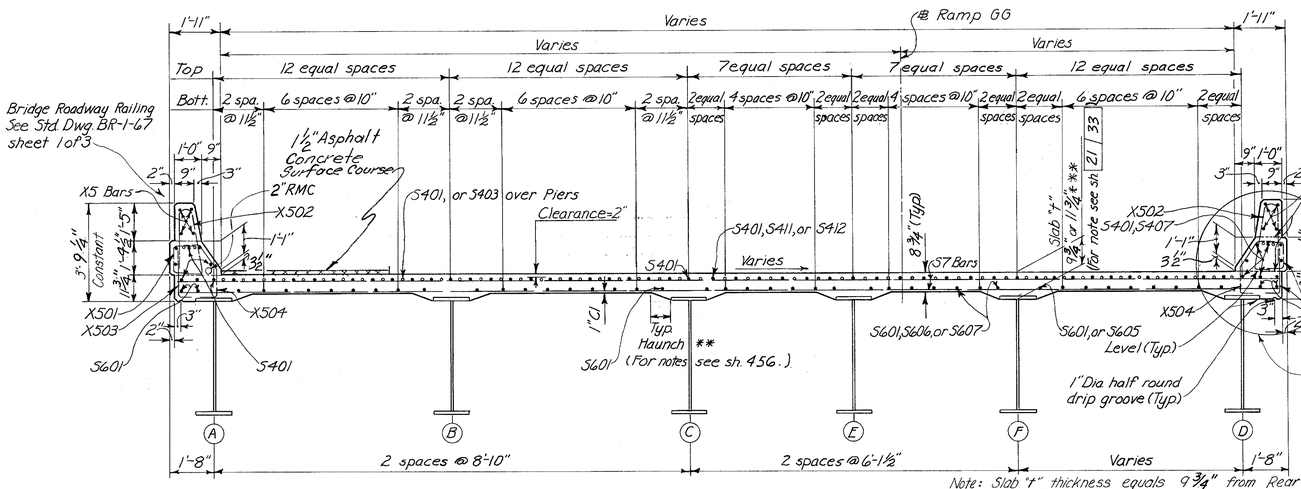
6"

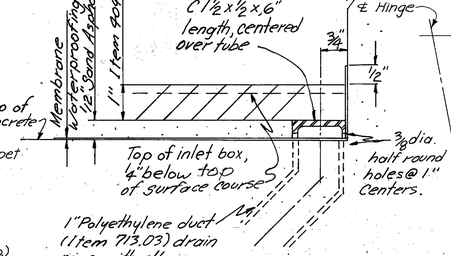
PLAN

(Railing not Shown)



Note: Slab "t" thickness equals 9¾" from Rear Abutment to hinge @ Pier 5 and 11¾" from hinge @ Pier 5 to Forward Abutment.

TRANSVERSE SECTION A-A



Note: Provide 1½" Clearance to reinforcing steel in parapet and curb.

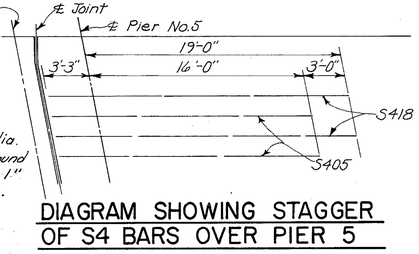


DIAGRAM SHOWING STAGGER OF S4 BARS OVER PIER 5

SUB DRAINAGE AND WEARING COURSE DETAILS

In addition to the location and spacing provision of 518.07, the Polyethylene tubes shall be located so that discharge from them will clear all structural members, including crossbracing, by at least 6". Place the top of the tube flush with the concrete surface. Place membrane over pipe, puncturing if membrane is a sheet type, with the hole sealed around the lip of the pipe. Include subdrainage with Item 404, Asphalt Concrete, for payment.

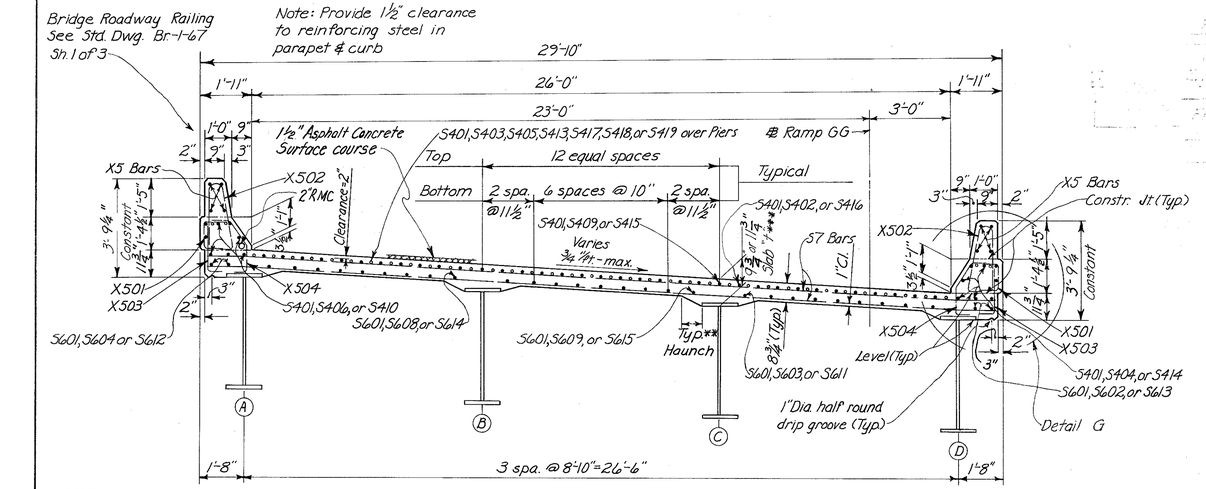
PLAN
(Railing not Shown)



*** This is the design dimension. The quantity of deck concrete to be paid for shall be based upon this dimension, even though deviation from it may be necessary because the top flange of the girder may not have the exact camber or conformation required to place it parallel to the finished grade. Deduction shall be made for volume of encased steel plates as per 511.18.

TRANSVERSE SECTION B-B

** A Haunch Width of 9" shall be used for computing quantity of concrete. However, the haunch width may vary between 6" and 12" provided that the slope shall be not more than 1:4 for a haunch less than 9" in width.

RE1001	Str.	2	8'-2"

NOTES:

Bar size is indicated in the bar mark. The first digit where three digits are used, and the first two digits where four are used, indicate the bar size number. For example, A501 is a No. 5 size bar and P1001 is a No. 10 size bar.

For bar bending schedule see sheet No. 470.

Total weight of reinforcing steel equals 304,557 lbs.

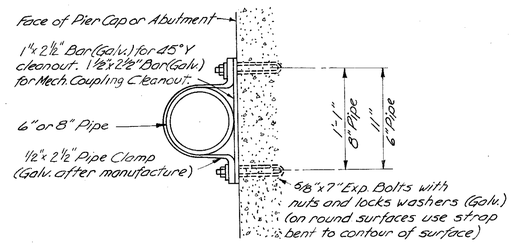
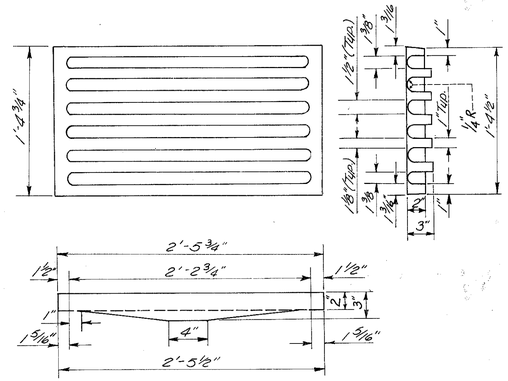
ALTERNATE DETAIL

TYPICAL SECTION
(For Piers)

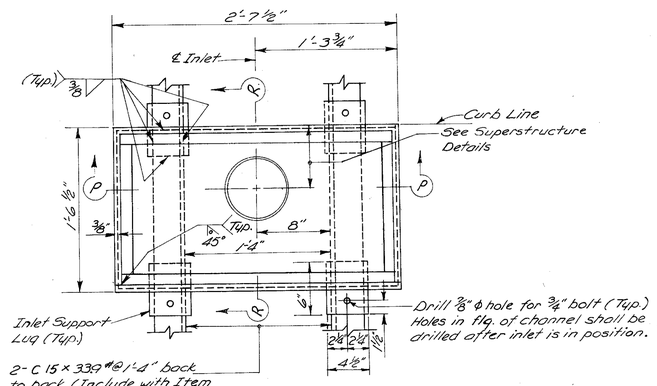
Note: "Drain Inlet" shall include inlet grating, 3/4" bolts, shims inlet frame, lugs and 6 inches of standard pipe for payment, Item 518, Each.



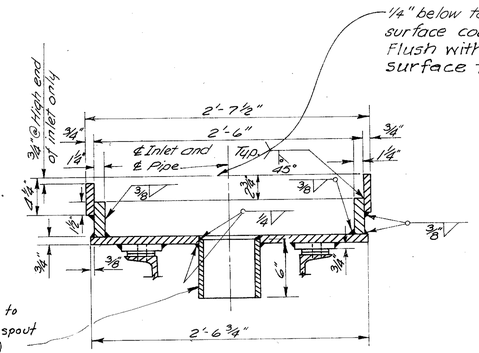
STRAP DETAIL "A"
For mounting on flat surface



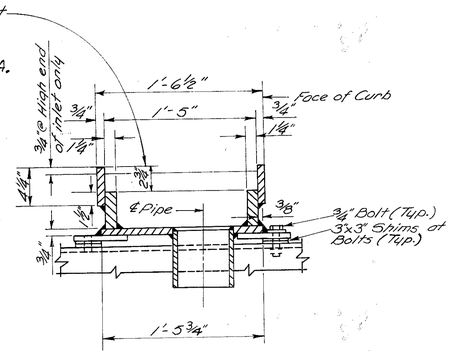
INLET GRATING
(City of Cincinnati Acc. No. 49012)



INLET FRAME



SECTION P P



SECTION R R

HAMILTON COUNTY
HAM-471-0.30

NOTES

(1) INLET GRATING CASTINGS SHALL MEET THE REQUIREMENTS OF SEC. 711.12 OF THE MATERIAL SPECIFICATIONS OF THE STATE OF OHIO.

(2) GRATINGS AND INLETS SHALL BE FITTED TO EACH OTHER WITHOUT RATTLING BY GRINDING GRATING CASTINGS AS NECESSARY.

(3) INLET FRAME TO BE WELDED STRUCTURAL STEEL PLATES AND STANDARD STEEL PIPE, GALVANIZED AFTER FABRICATION IN ACCORDANCE WITH 711.02.

(4) WELD CHANNELS TO BEAM WITH 5 INCH CONTINUOUS FILLET WELD. WELD TO BEAM WEBS ONLY.

(5) SPACE LUGS ON INLETS TO PERMIT BOLTING TO SUPPORTING CHANNELS AND BEAMS.

(6) COPE CHANNELS SO THAT TOP OF CHANNEL IS FLUSH WITH TOP OF FLANGE PLATE.

(7) DOWNSPOUTS SHALL BE 6" OR 8" (AS INDICATED ON BRIDGE PLANS) STANDARD ALLOY STEEL PIPE, 707.11 OF HOT-DIP GALVANIZED STEEL PIPE. JOINTS SHALL BE MADE BY WELDING OR BY THE USE OF CLAMP-TYPE COUPLING WITH A RING GASKET. ALL WELDING SHALL BE DONE BEFORE GALVANIZING. STRAPS OR CLAMPS FOR ATTACHING DOWNSPOUTS SHALL BE ALLOY STEEL OR HOT-DIP GALVANIZED STEEL. ON BOLTS, GALVANIZING AS CALLED FOR IN ASTM A-153 IS ACCEPTABLE.
