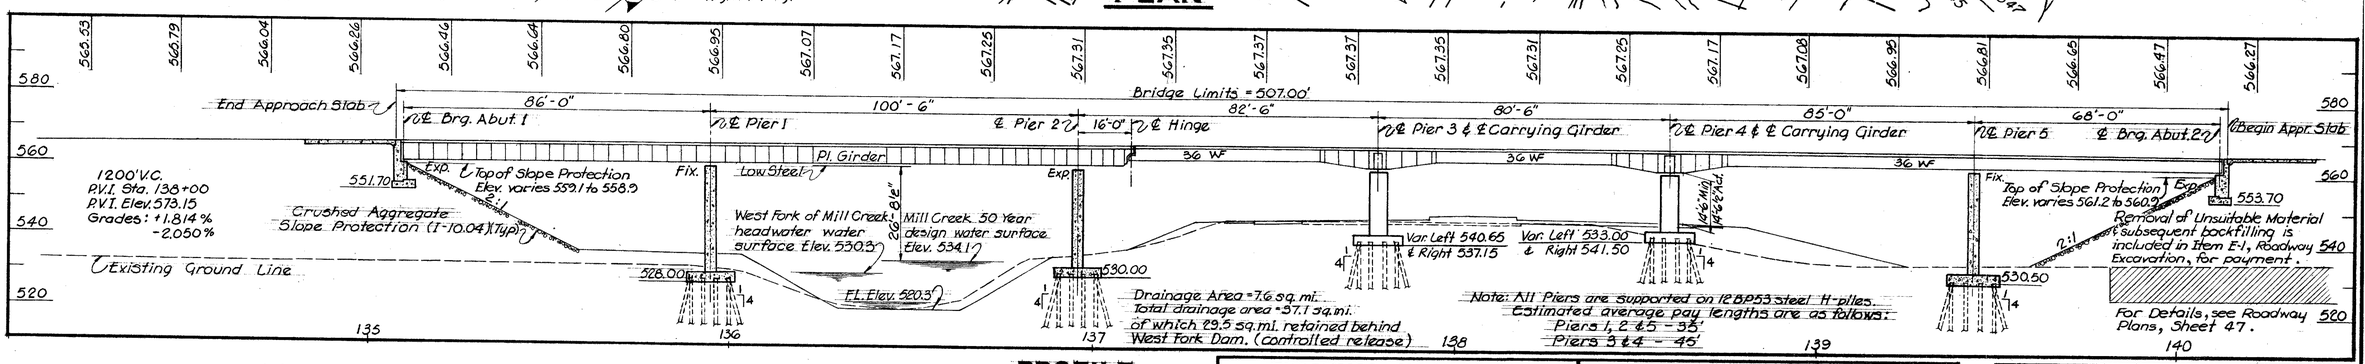
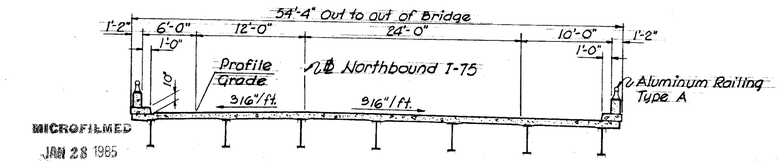
PLAN



PROFILE



TYPICAL SECTION

B.M. ME-10
Elev. 549.063
R.R. Spike in Pole
Sta. 139+10, 80' Rt. ℄ NORTHBOUND I-75

EXISTING UPSTREAM STRUCTURE DATA

TYPE: Reinforced concrete superstructure and substructure.
SPANS: 40'-0", 50'-0", 40'-0"
ROADWAY: 39.2' face to face of parapets.
SKEW: 20°00' R.F.
WEARING SURFACE: Bituminous over concrete slab.
CONDITION: Excellent except curbs and sidewalks show severe spalling.

PROPOSED STRUCTURE

TYPE: Continuous rolled steel beam and welded plate girder with reinforced concrete deck and substructure.
SPANS: 86'-0", 100'-6", 82'-6", 80'-6", 85'-0", 68'-0"
ROADWAY: 52'-0" face to face of parapets
LOAD FREQUENCY: CF = 2000 (57), adequate for A.A.S.H.O. alternate loading.
SKEW: 0°00'
WEARING SURFACE: 1" monolithic concrete
APPROACH SLABS: A3-1-54 (25' long)
ALIGNMENT: Tangent
ADT. = 40,000 (1975)

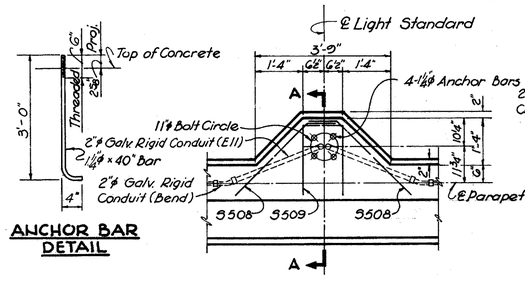
S - 29	93	Lin. Ft.	6" Perforated helical C.M.P. M-6.4(h) including specials.	93					
S - 29	101	Lin. Ft.	6" Helical C.M.P M-6.4(h) non-perforated.	101					
S -101	810	Each	Water reducing set-retarding admixture.			810			
I - 10	749	Sq. Yds.	Crushed aggregate slope protection.				749		
I -127	2	Each	Delineator bracket, mounted, type A-1.			2			
S-16		Lump Sum	First Test Pile						

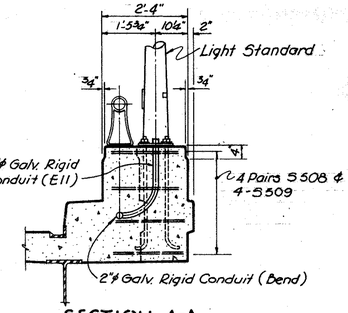
Materials in approach slabs are not included in the above estimated quantities.

Aluminum rail and supports, concrete parapet, reinforcing bars wholly within the concrete parapet and sponge rubber for parapet joints shall be included in item S-14 for payment.

* See Summary of Bridge Lighting Quantities, Sheet No. 265, for Details, Description, Unit & Quantity.



ANCHOR BAR DETAIL



SECTION A-A

LIGHT STANDARD PEDESTAL

Anchor bars are included with item S-25 for payment.

For additional details, see sh. 262.

GENERAL NOTES

REFERENCE shall be made to the following:

Standard Drawings: AR-1-57, revised 4-2-62
AS-1-54, revised 7-5-62
SD-1-63, Sheet 1, 2, 3, & 4 of 4, dated 11-12-63
FSB-1-62, revised 1-15-63

Supplemental Specifications : S-101, dated 7-12-62
S-307, dated 8-23-60

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with current revisions thereof.

EXCAVATION QUANTITY includes the removal of fill material required for construction of the abutments.

DESIGN LOADING -CF 2,000 (57)

CONCRETE CLASS "C" -Basic unit stress 1,333 p. s. i.
CONCRETE CLASS "E" -Basic unit stress 1,133 p. s. i.

STRUCTURAL STEEL -ASTM A36, basic unit stress 20,000 p. s. i. (ASTM A7 and A373 steel not permitted) (Except Piling)

REINFORCING STEEL - ASTM A15, A16, A160, Deformed, Intermediate or Hard Grade. Basic unit stress 20,000 p. s. i. Except, spiral reinforcement may be plain, Structural Grade with basic unit stress of 18,000 p. s. i.

FOUNDATION BEARING PRESSURE: Abutment footings are designed for a maximum bearing pressure of 2.5 tons per sq. ft.

Piles shall be driven to a minimum bearing capacity of 45 tons per pile for the piers.

Item S-7.10, High-Strength Steel Bolts, Nuts and Washers, paragraph two (2), shall be completely revised and the last sentence of paragraph four (4), revised to read as follows:
"In the final assembly of the parts to be bolted, drift pins shall be placed in a sufficient number of holes (not less than 25 percent for field erection) to provide and maintain accurate alignment of holes and parts, and sufficient bolts shall be installed and brought to a snug tight condition to bring the parts into complete contact. Bolts shall then be installed in any remaining open holes and tightened to a snug tight fit, after which all bolts shall be tightened completely by calibrated wrenches or by the turn-of-nut method. Drift pins shall then be replaced with bolts, tightened in the same manner."

"Bolt lengths determined by the use of Table No. 1 shall be adjusted to the next 1/4 inch length increment."

WELDING of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the Contractor, be made in the shop. Class "B" welds are shown thus: B>—

CONTINUOUS BEAM SHOP ASSEMBLY: Reference paragraph 4, Sec. S-7.12 of the Construction and Material Specifications, if rolled beams are field spliced only at supports, for the purpose of checking the fit-up of welds joint preparation, only two adjacent beams need be shop assembled at a time in their correct unloaded positions. All beams shall be assembled and match marked.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of concrete shall progress upgrade. The slab may be placed in sections, between transverse construction joints which are parallel to transverse reinforcing steel and are located near the center of any span.

SURFACE FINISH OF CONCRETE: The requirements of Sec. S-1.22, Rubbed Finish, shall apply to the following exposed concrete surfaces:

a. The entire superstructure except the top and bottom surfaces of safety curbs and roadways
b. The entire surface of piers and abutments except seats, backwalls and the face of spill-through abutments between outside beams or girders.

MACHINE FINISH: The concrete bridge deck shall be finished by the use of a finishing machine.

UTILITY LINES: All expense involved in relocating the affected utility lines shall be borne by the owners. The Contractor and Owners are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to a minimum.

Embankments shall be in place and compacted to subgrade elevation for a distance of 200 feet back of abutments for a minimum period of 90 days prior to beginning construction of the abutments.

SECTION C-C

NOTES

1. The embankment shall be place compacted up to the finished spi slope and to the level of the su for a distance of 200 feet bac abutments. Following a 90-day period, excavation shall be mad
2. Porous backfill, 1'-6" thick and of the abutment, shall extend bottom of approach slab or p der. Excavation therefor, in ex required for construction of ment, shall be considered as the bid price per cubic yard porous backfill.
3. Special care shall be taken reinforcing steel in the vicin bridge seat so as to avoid with the drilling of anchor r
4. Aluminum railing shall be c full length of wingwalls.
5. For Contraction Joint Deta
6. For end dam details, see SL 11-12-63, Sh. 2 & 4.
7. For REINFORCING STEEL L
8. For lighting details, see -

NOTES

1. CROSS FRAMES:
   a. All Intermediate Crossframes for Unit 1 are F2 except as shown.
   b. All Intermediate Crossframes for Unit 2 are F8 except as shown.
   c. For details of Intermediate Crossframes F2, F3, F4, F5, F8 and F9, see sht. 304
   d. For details of End Crossframe F1 and End Diaphragm F6, see sht. 304
   e. For details of End Crossframe F7, see Std. Dwg. SD-1-63, sht. 2 of 4 dated 11-12-63.
2. ERECTION PROCEDURE: The Contractor shall submit to the Director for approval, 3 prints showing proposed erection procedure for this structure which shall, in general, conform to the following sequence:
   a. Erect girder spans 1 and 2 with sufficient crossframes bolted in place to ensure stability.
   b. Set and brace carrying girders in position at Piers 3 and 4.
   c. Erect beams in spans 3, 4, 5 and 6 with erection bolts at carrying girders, providing adequate clamps and blocking to prevent movement at the hinge adjacent to Pier 2 during this phase, and installing sufficient temporary bracing to ensure stability.
   d. Butt weld beam flanges and webs at field splice points adjacent to carrying girders using the following sequence: make two passes on the web, then two on each flange; repeat, using one or two passes at each location, until welds are completed.
   e. Raise the abutment end of the beams in Span 6 1⅛" and butt weld beam flanges and webs at Pier 5 using the sequence given in step d.
   f. Weld top and bottom moment plates at Pier 5.
   g. Lower end of beams at abutment 2.
   h. Remove temporary clamps and blocking at the hinge.
   i. Complete installation of crossframes and remove temporary bracing at the beams.
3. BEAM SPLICE: For beam splice details and end preparation of rolled beams for field welding, see Std. Dwg. SD-1-63 sht. 1 of 4 dated 11-12-63.
4. MATERIALS:
   a. Structural steel for hinge plates & pin plates shall conform to the requirements of ASTM A36, copper bearing.
   b. Structural steel for hinge pins shall conform to the requirements of ASTM Designation A-108.
5. WELDING: Butt welds shall be radiographically examined in accordance with Supplemental Specification No. S-307 dated 8-23-60.
6. SCUPPERS AND BULB ANGLE GUTTERS: For details, see Std. Dwg. SD-1-63, sheet 3 of 4 dated 11-12-63.
7. SCUPPERS: For location, see sht. 307
8. CURB PLATES: See sht. 307 for details.
9. FIXED AND SLIDING BEARINGS: For details of bearings at Piers 1, 2, 5 and Abutments 1 and 2, see Std. Dwg. FSB-1-62, revised 1-15-63. For details of bearings at Piers 3 and 4, see sht. 306
10. STIFFENERS: Intermediate stiffeners shall have contact bearing with the top flange within Region T, but may have a clearance not exceeding ⅛" at the bottom flange. Within Region B, intermediate stiffeners shall have contact bearing with the bottom flange and ⅜" maximum clearance at the top flange. Adequate care in shop painting all junctions of intermediate stiffeners and flanges, where contact bearing is not provided, shall be exercised to make certain that paint is forced through such openings from one side to the other. Bearing stiffeners shall be placed vertically.
11. END DAMS: For details of end dams at abutments 1 & 2, see Std. Dwg. SD-1-63, sht. 2 of 4 dated 11-12-63.
12. EXPANSION JOINT AT HINGE: For details, see sht. 307
13. BEVEL FILL: For additional details see Detail D, Std. Dwg. SD-1-63 sht. 2 of 4 dated 11-12-63.
14. For additional details and Notes, see shts. 304, 305 and 306.
15. For GENERAL NOTES, see sht. 294.

SECTION B-B

CURB PLATE DETAILS AT HINGE

DECK SLAB HAUNCH: The haunch in the deck slab adjacent to the top of the girders & beams, which is shown as 9" wide, may vary from this dimension between the limits of 6" and 12", except that the maximum slope shall not exceed 3 inches per foot. Payment for deck slab concrete shall be based on the 9" width.

* These are nominal dimensions. The quantity of deck concrete to be paid for shall be based on these dimensions, even though deviation from them may be necessary because the top flange of the beam or girder may not have the exact camber or conformation required to place it parallel to the finished grade.

MICROFILMED JAN 28 1985

NOTES:

1. Slab thickness includes 1" monolithic wearing surface.
2. Spread or cut longitudinal reinforcing steel in slab to clear scuppers.
3. For scupper and gutter details, see Std. Dwg. SD-1-63, Sht. 3 of 4. All scuppers are type II.
4. For railing and parapet joint details, see Std. Dwg. AR-1-57.
5. For Abutment end dam details, see Std. Dwg. SD-1-63, Sht. 2 & 4 of 4.
6. For light standard pedestal, see detail, sht. 294.
7. Parapet concrete and S504, S505, S506 and S507 are to be included with Item S-14 for payment.
8. For curb plate details at Abutments, see Std. Dwg. SD-1-63, Sht. 4 of 4.
9. Delineator bracket, type A-1, shall be mounted on the aluminum railing to the right of NB I-75 baseline at Station 136+39 & Station 138+39.
10. Provide for expansion in the 2" galv. rigid conduit at all expansion joints in the roadway slab similar to Detail - Conduit Through Wingwall, as shown on sht. 26

NOTES

1. BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED AND THE FIRST TWO DIGITS WHERE FO ARE USED, INDICATE THE BAR SIZE NUMBER.
2. BARS MARKED WITH AN ASTERISK TO BE INCLUDED FOR PAYMENT UNDER ITEM S-14 RAILING.
3. SPIRAL REINFORCING BARS: THE "LENGTH" SH IN THE STEEL LIST FOR THE SPIRAL BARS IS THE DISTANCE FROM TOP OF THE FOOTING TO THE BOTTOM OF CAP, OR TO WITHIN 2" (±) O THE TOP OF COLUMN FOR PIERS WITHOUT CA TO THE NEAREST INCH.

   SPIRAL REINFORCING BARS SHALL NOT HA DEFORMATIONS, BUT SHALL IN OTHER RESPECT CONFORM TO ITEM S-4.

   FOUR STEEL CHANNEL, TEE OR ANGLE SPACI WEIGHING APPROXIMATELY 0.68 LB. PER LIN FT. OF SPACER SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE EQUALLY SPACI ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF THESE SPACERS, BASE ON 0.68 LB. PER LIN. FT., WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY OF SPIRAL BARS.
4. SEE SHEET 309 FOR BENDING DETAILS.

BAR BENDING DETAILS

NOTES

1. FIGURES IN CIRCLES SHOW BAR TYPES.
2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. "J" DIMENSION ON HOOKS TO BE SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOK SIZE, OTHERWISE STANDARD HOOKS ARE TO BE USED.
4. WHERE "J" IS NOT SHOWN "J" WILL BE KEPT EQUAL TO OR LESS THAN "H" WHERE "J" CAN EXCEED "H" IT SHOULD BE SHOWN.
5. "H" DIMENSION ON STIRRUPS TO BE SHOWN WHERE NECESSARY TO RESTRICT HOOKS.
6. ALL BENDS SHOWN ARE BENT AROUND A STANDARD MANDREL, EXCEPT STIRRUPS S11, TIES T3, SPIRALS SP1 AND WHERE RADIUS "R" IS INDICATED.
7. RADIUS DIMENSION "R" IS TO OUTSIDE OF BAR.
8. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
9. FOR STANDARD HOOK DIMENSIONS, SEE SECT. S-4.05 OF THE SPECIFICATIONS.
10. FOR BAR TYPE SP1, THE NO. OF TURNS "D" IS THE LENGTH "C" DIVIDED BY THE PITCH "B", PLUS 3 TURNS (TOTAL NUMBER OF CLOSED COILS), EXPRESSED AS THE NEAREST WHOLE NUMBER. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH SPIRAL UNIT.

Materials in approach slabs are not included in the above estimated quantities.

Aluminum rail and supports, concrete parapet, reinforcing bars wholly within the concrete parapet and sponge rubber for parapet joints shall be included in item S-14 for payment.

GENERAL NOTES

REFERENCE shall be made to the following:
Standard Drawings: AR-1-57, revised 4-2-62
AS-1-54, revised 7-5-62
Supplemental Specifications: S-105, revised 1-22-62
S-101, dated 7-12-62

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with revisions dated 2-21-58, 11-15-60, 2-15-61, and other current revisions thereof.

DESIGN LOADING - S 20 - 60

CONCRETE CLASS "C"-Basic unit stress 1,333 p. s. i.
CONCRETE CLASS "E"-Basic unit stress 1,133 p. s. i.
PRESTRESSED CONCRETE - 5,500 p. s. i. at 28 days and 4,000 p. s. i. at transfer.
REINFORCING STEEL - ASTM A15, A16, A160, Deformed, Intermediate or Hard Grade. Basic unit stress 20,000 p. s. i. Except, spiral reinforcement may be plain, Structural Grade with basic unit stress of 18,000 p. s. i.

PRESTRESSING STEEL - ASTM A416

PILES shall be driven to a minimum bearing capacity of 40 tons per pile for abutments and piers.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of concrete shall progress upgrade. The slab shall be placed between transverse joints at abutments and piers without additional construction joints.

UTILITY LINES: All expenses involved in relocating the affected utility lines shall be borne by the owners. The Contractor and Owners are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to a minimum.

PREPARATION OF SURFACE: Surface of existing concrete which will be in contact with new concrete masonry shall be thoroughly cleaned of all dirt, dust or other foreign materials by the use of water and/or air under pressure and such other methods as are necessary to secure satisfactory results. The surface shall then be thoroughly drenched with clean water and kept wet for a period of 2 hours before placing the new concrete masonry.

SURFACE FINISH OF CONCRETE: The requirements of Sec. S-1, 22, Rubbed Finish, shall apply to the following exposed concrete surfaces:
a. The entire superstructure except the top and bottom surfaces of sidewalks and roadways.

MACHINE FINISH: At the Contractor's option the concrete deck may be finished by the use of a finishing machine.

REMOVAL OF PORTIONS OF EXISTING STRUCTURE: Portions of the existing abutments, wingwalls and superstructure as defined on the plans shall be removed in accordance with Item S-22 and the material shall be disposed of in accordance with Sec. E-1.06 (a).

NOTES

1. Placement of Water Main thru abut. backwall in 18"ϕ Corrugated metal pipe carrying 6" water main to be relocated and hung in place under existing structure (as shown on Plans Sheet 320) before backwall is formed. Reinforcing steel interfering with the placement of pipe at abutment backwall may be cut or relocated in order to clear 18"ϕ Corrugated metal pipe. Plug open end of 18"ϕ C.M.P. with 3" min. thickness grout.
2. Special care shall be taken when excavating along south end of existing abutment so as to avoid damage to existing 4"ϕ tile drain. After location of drain, the Engineer shall determine in the field, a suitable method for connecting existing drain into new 6"ϕ C.M.P. Existing drain connection to be secured and grouted in place into the end of the new 6"ϕ P.C.M.P.
3. Holes drilled into existing concrete for the placement of anchor dowels shall be 2'-0" deep and be made in accordance with Sect. 523.02.
4. For General Notes & Estimated Quantities, see Sh. 311.
5. For Reinforcing Steel List & Bar Bending Diagrams, see Shs. 321 & 322.
6. Reinforcing steel in beam seat shall be placed so that it will not interfere with the drilling of anchor dowel holes.
7. All Reinforcing Steel shall have a minimum cover of 2" on concrete unless otherwise noted.
8. For Sections & Details, see Sh. 317A.
9. Porous Backfill 2'-3" thick behind existing backwall and 1'-6" thick behind backwall extensions and wingwalls, shall be placed to the ends of the footing and extend up to the underside of the approach slab and sidewalk and to 2'-0" below the finished grade behind wingwalls.

SECTION E-E

NOTES

1. TRANSVERSE TIERODS shall be provided through the diaphragms in the positions indicated. Each tie shall be equivalent to a 1" ϕ mild steel rod, as per Sec. M-7.4, tightened to 18,000 pounds. Tension may be applied by a torque of approximately 300 foot-pounds with the threads lubricated.
2. MORTARING OF SHEAR KEYS: After transverse tie rods have been placed and tightened, shear keys between the beams shall be filled with low-slump non-shrinking portland cement mortar. Mortar shall be tamped into the keyway in a manner that insures complete and solid filling.
3. SHEAR KEYS on the exterior face of G1, G11, G12, G22, G23 & G33 may at the option of the Contractor be eliminated.
4. ELASTOMERIC BEARING PADS of 50 hardness shall conform to ASTM requirements referred to in Sec. M-10.29. Pads shall be furnished with 2" ϕ holes accurately positioned for anchor dowels.
5. GALVANIZING: All tie rods, inserts and nuts shall be galvanized as per Sec. M-7.4 (d).
6. INITIAL TENSIONING before transfer, shall be 14,000 lbs. per strand.
7. Drill 1½" ϕ holes for dowels after transverse tie rods are placed. Grout dowels in bridge seat according to Sec. S-23.02.
8. HOLES FOR 1" ϕ TIE RODS may at option of the Contractor be 2½" ϕ.
9. NON FERROUS DRAIN ¾" ϕ shall be provided at each end of all voids.
10. For Section B-B and additional details, see Sh. 320.
11. PRESTRESSING STANDS are ⅜" uncoated seven wire stress-relieved strand with an initial tension of 14,000 pounds per strand.

NOTES

1. Use 18"φ Corrugated Metal Pipe to carry 6"φ relocated Water Main under Structure. 18"φ C.M.P. to be hung in accordance with the details shown. The 6"φ watermain to be centered within 18"φ C.M.P. on metal chairs spaced 12" c to c.
2. Wool insulation shall be carefully packed around 6"φ watermain filling all voids and shall meet the requirements set forth by the Cincinnati Waterworks.
3. Upon completion of Pipe installation and the erection of the backwall grout the exposed ends of 18"φ C.M.P. extended beyond rear face of backfill.
4. Remove existing 4" concrete wearing surface and existing integral curbs as shown in Typical Transverse Section. Clean surface and remove loose material before placing concrete.
5. Reinforcing steel which interferes with the placement of scuppers shall be cut in the field.
6. ** Asterisks indicate that the distance shown is a nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension, even though deviation from it may be necessary.
7. All labor and materials required for the removal and disposal of the existing watermain and installation of the new watermain, hangers, and encasement as shown in detail C shall be included in the unit price bid for Item Special, Laying 6" Cast Iron Pipe for Bridge Crossing As Per Plan. Quantity Carried on Sheets 52 and 30
8. For Reinforcing Steel List and Bar Bending Diagrams, see Sh's. 321 & 322.
9. For additional details, see Sh. 319.
10. For General Notes and Estimated Quantities, see Sh. 3

NOTES

1. BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED AND THE FIRST TWO DIGITS WHERE FOU ARE USED, INDICATE THE BAR SIZE NUMBER.
2. BARS MARKED WITH AN ASTERISK TO BE INCLUDED FOR PAYMENT UNDER ITEM S-14, RAILING.
3. SPIRAL REINFORCING BARS: THE "LENGTH" SHOW IN THE STEEL LIST FOR THE SPIRAL BARS IS THE DISTANCE FROM TOP OF THE FOOTING TO THE BOTTOM OF CAP, OR TO WITHIN 2" (±) OF THE TOP OF COLUMN FOR PIERS WITHOUT CAP TO THE NEAREST INCH.

   SPIRAL REINFORCING BARS SHALL NOT HAVE DEFORMATIONS BUT SHALL IN OTHER RESPECTS CONFORM TO ITEM S-4.

   FOUR STEEL CHANNEL, TEE OR ANGLE SPACER WEIGHING APPROXIMATELY 0.68 LB. PER LIN. FT. OF SPACER SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE EQUALLY SPACED ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF THESE SPACERS, BASED ON 0.68 LB. PER LIN. FT., WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY OF SPIRAL BARS.
4. SEE SHEET 322 FOR BENDING DETAILS.

BAR BENDING DETAILS

NOTES

1. FIGURES IN CIRCLES SHOW BAR TYPES.
2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. "J" DIMENSION ON HOOKS TO BE SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOK SIZE, OTHERWISE STANDARD HOOKS ARE TO BE USED.
4. WHERE "J" IS NOT SHOWN "J" WILL BE KEPT EQUAL TO OR LESS THAN "H." WHERE "J" CAN EXCEED "H" IT SHOULD BE SHOWN.
5. "H" DIMENSION ON STIRRUPS TO BE SHOWN WHERE NECESSARY TO RESTRICT HOOKS.
6. ALL BENDS SHOWN ARE BENT AROUND A STANDARD MANDREL, EXCEPT STIRRUPS S11, TIES T3, SPIRALS SP1 AND WHERE RADIUS "R" IS INDICATED.
7. RADIUS DIMENSION "R" IS TO OUTSIDE OF BAR.
8. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
9. FOR STANDARD HOOK DIMENSIONS, SEE SECT. S-4.05 OF THE SPECIFICATIONS.
10. FOR BAR TYPE SP1, THE NO. OF TURNS "D" IS THE LENGTH "C" DIVIDED BY THE PITCH "B", PLUS 3 TURNS (TOTAL NUMBER OF CLOSED COILS), EXPRESSED AS THE NEAREST WHOLE NUMBER. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH SPIRAL UNIT.

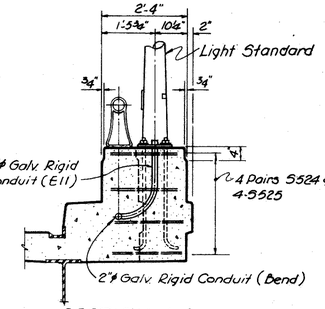
ANCHOR BAR DETAIL



SECTION A-A

LIGHT STANDARD PEDESTAL

Anchor bars are included with item S-25 for payment.

For additional details, see sh. 262.

Materials in approach slabs are not included in the above estimated quantities.

Aluminum rail and supports, concrete papapet, reinforcing bars wholly within the concrete parapet and sponge rubber for parapet joints shall be included in item S-14 for payment.

* See Summary of Bridge Lighting Quantities, Sheet No. 265, for Details, Description, Unit & Quantity.

GENERAL NOTES

REFERENCE shall be made to the following:
Standard Drawings: AR-1-57, revised 4-2-62
AS-1-54, revised 7-5-62
SD-1-63, Sheet 1, 2, 3, & 4 of 4, dated 11-12-63
FSB-1-62, revised 1-15-63
Supplemental Specifications: S-101, dated 7-12-62
S-307, dated 8-23-60

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with current revisions thereof.

EXCAVATION QUANTITY includes the removal of fill material required for construction of the abutments.

DESIGN LOADING -CF 2,000 (57)

CONCRETE CLASS "C"-Basic unit stress 1,333 p. s. i.
CONCRETE CLASS "E"-Basic unit stress 1,133 p. s. i.

STRUCTURAL STEEL - ASTM A36, basic unit stress 20,000 p. s. i. (ASTM A7 and A373 steel not permitted) (Except Piling)

REINFORCING STEEL - ASTM A15, A16, A160, Deformed, Intermediate or Hard Grade. Basic unit stress 20,000 p. s. i. Except, spiral reinforcement may be plain, Structural Grade with basic unit stress of 18,000 p. s. i.

Piles shall be driven to a minimum bearing capacity of 40 tons per pile for the abutments and piers.

WELDING of structural sheel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the Contractor, be made in the shop. Class "B" welds are shown thus: B >—

CONTINUOUS BEAM SHOP ASSEMBLY: Reference paragraph 4, Sec. S-7.12 of the Construction and Material Specifications, if rolled beams are field spliced only at supports, for the purpose of ckecking the fit-up of weld joint preparation, only two adjacent beams need be shop assembled at a time in their correct, unloaded positions. All beams shall be assembled and match marked.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of concrete shall progress upgrade. The slab may be placed in sections, between transverse construction joints which are parallel to transverse reinforcing steel and are located near the center of any span.

MACHINE FINISHING: At the Contractor's option the concrete deck may be finished by the use of a finishing machine.

UTILITY LINES: All expenses involved in relocating the affected utility lines shall be borne by the owners. The Contractor and Owners are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to a minimum.

NOTES

1. Porous backfill shall extend upward to the bottom of approach slab or to the surface of the earth shoulders, and outward to the surface of embankment slopes. Excavation therefore, in excess of that required for construction of the abutment, shall be considered as paid for in the bid price per cu. yd. paid for porous backfill.
2. Special care shall be taken in placing reintorcing steel in the vicinity of the bridge seat so as to avoid interference with the drilling of anchor rod holes.
3. For end dam details see SD-1-63 sheets 2&4 of 4 dated 11-12-63. Unwelded butt joints shall be provided in the abutment end dam at the contraction joints.
4. For reintoring steel list see sheet 335.
5. For reference line layout see sheet 323.
6. For Contraction Joint detail see sheet 330.

PLAN

TRANSVERSE SECTION

DECK SLAB HAUNCH: The haunch in the deck slab adjacent to the top of the rolled beams, which is shown as 9" wide, may vary from this dimension between the limits of 6" and 12", except that the maximum slope shall not exceed 3 inches per foot. Payment for deck slab concrete shall be based on the 9" width.

*This is a nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension, even though deviation from it may be necessary because the top flange of the rolled beam may not have the exact camber or conformation required to place it parallel to the finished grade.

NOTES

1. Slab thickness includes 1" monolithic wearing surface.
2. Spread or cut longitudinal reinforcing steel in slab to clear scuppers.
3. For railing and parapet joint details, see Std. Dwg. AR-1-57
4. For end dam details, see Std. Dwg. SD-1-63, Sht. 2 & 4 of 4.
5. Parapet concrete and S509, S510, S511, S513, S506 and S523 are to be included with Item S-14 for payment.
6. For light standard pedestal, see detail, sheet 324.
7. See sht. 334 for additional details.
8. For Scuppers and Bulb ∠ Gutter details, see Std. Dwg. SD-1-63, Sh. 3 of 4. All scuppers shall be Type I scuppers, and shall be supported on the deck form by Cone Nut Assemblies similar to those shown in Gutter Support B.
9. Parapet and railing dimensions are measured along the fascia line.

NOTES

1. BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED AND THE FIRST TWO DIGITS WHERE FOUR ARE USED, INDICATE THE BAR SIZE NUMBER.
2. BARS MARKED WITH AN ASTERISK TO BE INCLUDED FOR PAYMENT UNDER ITEM S-14, RAILING.
3. SPIRAL REINFORCING BARS: THE "LENGTH" SHOWN IN THE STEEL LIST FOR THE SPIRAL BARS IS THE DISTANCE FROM TOP OF THE FOOTING TO THE BOTTOM OF CAP, OR TO WITHIN 2" (±) OF THE TOP OF COLUMN FOR PIERS WITHOUT CAPS TO THE NEAREST INCH.

   SPIRAL REINFORCING BARS SHALL NOT HAVE DEFORMATIONS BUT SHALL IN OTHER RESPECTS CONFORM TO ITEM S-4.

   FOUR STEEL CHANNEL, TEE OR ANGLE SPACERS WEIGHING APPROXIMATELY 0.68 LB. PER LIN. FT. OF SPACER SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE EQUALLY SPACED ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF THESE SPACERS, BASED ON 0.68 LB. PER LIN. FT., WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY OF SPIRAL BARS.
4. SEE SHEET 336 FOR BENDING DETAILS.

ENLARGED VIEW SHOWING
BAR BENDING DETAILS

NOTES

1. FIGURES IN CIRCLES SHOW BAR TYPES.
2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. "J" DIMENSION ON HOOKS TO BE SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOK SIZE, OTHERWISE STANDARD HOOKS ARE TO BE USED.
4.  WHERE "J" IS NOT SHOWN "J" WILL BE KEPT EQUAL TO OR LESS THAN "H". WHERE "J" CAN EXCEED "H" IT SHOULD BE SHOWN.
5. "H" DIMENSION ON STIRRUPS TO BE SHOWN WHERE NECESSARY TO RESTRICT HOOKS.
6. ALL BENDS SHOWN ARE BENT AROUND A STANDARD MANDREL, EXCEPT STIRRUPS S11, TIES T3, SPIRALS SP1 AND WHERE RADIUS "R" IS INDICATED.
7. RADIUS DIMENSION "R" IS TO OUTSIDE OF BAR.
8. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
9. FOR STANDARD HOOK DIMENSIONS, SEE SECT. S-405 OF THE SPECIFICATIONS.
10. FOR BAR TYPE SP1, THE NO. OF TURNS "D" IS THE LENGTH "C" DIVIDED BY THE PITCH "B", PLUS 3 TURNS (TOTAL NUMBER OF CLOSED COILS), EXPRESSED AS THE NEAREST WHOLE NUMBER. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH SPIRAL UNIT.

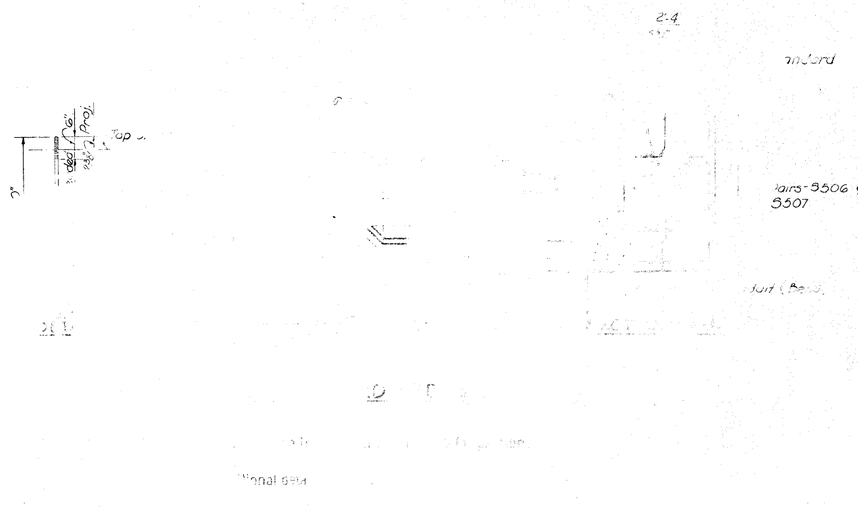
S-9	60	Sq. Ft.	½" Preformed expansion joint filler				60		

Materials in approach slabs are not included in the above estimated quantities.

Aluminum rail and supports, concrete parapet, reinforcing bars wholly within the concrete parapet and sponge rubber for parapet joints shall be included in item S-14 for payment.

* See Summary of Bridge Lighting Quantities, Sheet No. 265, for Details, Description, Unit & Quantity.



GENERAL NOTES

REFERENCE shall be made to the following-
Standard Drawings: AR-1-57, revised 4-2-62
AS-1-54, revised 7-5-62
SD-1-63, Sheet 1, 2, 3, & 4 of 4, dated 11-12-63
FSB-1-62, revised 1-15-63
Supplemental Specifications: S-307 dated 8-23-60
S-101 dated 7-12-62

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways dated 9-1-57, together with current revisions thereof.

EXCAVATION QUANTITY includes the removal of fill material required for construction of the abutments.

DESIGN LOADING -CF 2,000 (57)

CONCRETE CLASS "C"-Basic unit stress 1,333 p. s. i.
CONCRETE CLASS "E" -Basic unit stress 1,133 p. s. i.

STRUCTURAL STEEL - ASTM A36, basic unit stress 20,000 p. s. i. (ASTM A7, and A373 steel not permitted)

REINFORCING STEEL - ASTM A15, A16, A160, Deformed, Intermediate or Hard Grade. Basic unit stress 20,000p. s. i. Except, spiral reinforcement may be plain, Structural Grade with basic unit stress of 18,000 p. s. i.

FOUNDATION BEARING PRESSURE: Abutment and Pier footings are designed for a maximum bearing pressure of 2.0 tons per sq. ft.

WELDING of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the Contractor, be made in the shop. Class B welds are shown thus: B>—

CONTINUOUS BEAM SHOP ASSEMBLY: Reference paragraph 4, Sec. S-7.12 of the Construction and Material Specifications, if rolled beams are field spliced only at supports, for the purpose of checking the fit-up weld preparation, only two adjacent beams need be shop assembled at a time in their correct, unloaded positions. All beams shall be assembled and match marked.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of concrete shall progress upgrade. The slab may be placed in sections, between transverse construction joints which are parallel to transverse reinforcing steel and are located near the center of any span.

SURFACE FINISH OF CONCRETE: The requirements of Sec. S-1.22, Rubbed Finish, shall apply to the following exposed concrete surfaces:

A. The entire superstructure except the top and bottom surfaces of safety curbs and roadways.
B. The entire surface of piers and abutmenst except bridge seats, backwalls and the face of spill-through abutments between outside beams.

MACHINE FINISH: At the Contractor's option the concrete deck may be finished by the use of a finishing machine.

UTILITY LINES: All expenses invloved in relocating the affected utility lines shall be borne by the owners. The Contractor and Owners are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to a minimum.

NOTES

1. For reference line layout, see Sh. 337.
2. Porous backfill, 1'-6" thick, full length of abutment, shall extend up to the bottom of approach slab or paved shoulder. Excavation therefor, in excess of that required for construction of the abutment, shall be considered as paid for in the bid price per cubic yard paid for porous backfill.
3. The embankment shall be placed and compacted up to the finished spill-thru slope and to the level of the subgrade for a distance 200 feet back of the abutment, after which excavation shall be made.
4. Special care shall be taken in placing reinforcing steel in vicinity of bridge seat so as to avoid interference with the drilling of anchor rod holes.
5. Aluminum railing shall be continuous for the full length of wingwalls.
6. For end dam details, see Std. Dwg. SD-1-63 Sh. 2 of 4.
7. For Lighting Details, see Sh. 338.

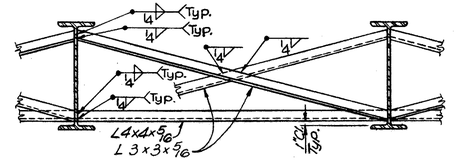
*Beam lies outside the curb line at this point; elevation given is the theoretical extension of roadway surface.



INTERMEDIATE CROSSFRAME DETAIL

BEAM SPLICE WELDING PROCEDURE

1. No raise required at the ends of beams.
2. Butt-weld the beam flanges and web, using the following sequence: make two passes on the web, then two on each flange; repeat, using one pass at each location, until welds are completed.
3. Any roughness from burning shall be removed by grinding.

NOTES:

1. For Reference Line Layout, see Sh. 337.
2. For end dam details, see Std. Dwg. SD-1-63, Sh. 2 of 4.
3. For scupper locations, see Sh. 347.
4. For scupper and bulb angle gutter details, see Std. Dwg. SD-1-63, Sh. 3 of 4.
5. For Fixed and Sliding bearing details, see Std. Dwg. FBB-1-62, Revised 1-15-63.
6. For curb plate details see Std. Dwg. SD-1-63, Sh. 4 of 4.
7. For end preparation of rolled beams for field welding, see Detail C, Std. Dwg. SD-1-63, Sh. 1 of 4.

TRANSVERSE SECTION

DECK SLAB HAUNCH: The haunch in the deck slab adjacent to the top of the steel beams, which is shown as 9" wide, may vary from this dimension between the limits of 6" and 12", except that the maximum slope shall not exceed 3 inches per foot. Payment for deck slab concrete shall be based on the 9" width.

* This is a nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension even though deviation from it may be necessary because the top flange of the beam may not have the exact camber or conformation required to place it parallel to the finished grade.

NOTES

1. Slab thickness includes 1" monolithic wearing surface.
2. Spread or cut longitudinal reinforcing steel in slab to clear scuppers.
3. For scupper and gutter details, see SD-1-63, Sheet 3.
4. For railing and parapet joint details, see Std. Dwg. AR-1-57.
5. For end dam details, see SD-1-63, Sheets 2 & 4.
6. Delineator bracket, type C-2, shall be mounted on the aluminum handrail right of ℄ Northbound I-75 at Sta. 162+43.

NOTES

1. BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED AND THE FIRST TWO DIGITS WHERE FOUR ARE USED, INDICATE THE BAR SIZE NUMBER.
2. BARS MARKED WITH AN ASTERISK TO BE INCLUDED FOR PAYMENT UNDER ITEM S-14, RAILING.
3. SPIRAL REINFORCING BARS: THE "LENGTH" SHOWN IN THE STEEL LIST FOR THE SPIRAL BARS IS THE DISTANCE FROM TOP OF THE FOOTING TO THE BOTTOM OF CAP, OR TO WITHIN 2" (±) OF THE TOP OF COLUMN FOR PIERS WITHOUT CAPS TO THE NEAREST INCH.

   SPIRAL REINFORCING BARS SHALL NOT HAVE DEFORMATIONS BUT SHALL IN OTHER RESPECTS CONFORM TO ITEM S-4.

   FOUR STEEL CHANNEL, TEE OR ANGLE SPACERS WEIGHING APPROXIMATELY 0.68 LB. PER LIN. FT. OF SPACER SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE EQUALLY SPACED ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF THESE SPACERS, BASED ON 0.68 LB. PER LIN. FT., WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY OF SPIRAL BARS.
4. SEE SHEET 349 FOR BENDING DETAILS.

2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. "J" DIMENSION ON HOOKS TO BE SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOK SIZE, OTHERWISE STANDARD HOOKS ARE TO BE USED.
4.  WHERE "J" IS NOT SHOWN "J" WILL BE KEPT EQUAL TO OR LESS THAN "H." WHERE "J" CAN EXCEED "H" IT SHOULD BE SHOWN.
5. "H" DIMENSION ON STIRRUPS TO BE SHOWN WHERE NECESSARY TO RESTRICT HOOKS.
6. ALL BENDS SHOWN ARE BENT AROUND A STANDARD MANDREL, EXCEPT STIRRUPS S11, TIES T3, SPIRALS SP1 AND WHERE RADIUS "R" IS INDICATED.
7. RADIUS DIMENSION "R" IS TO OUTSIDE OF BAR.
8. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
9. FOR STANDARD HOOK DIMENSIONS, SEE SECT. S-405 OF THE SPECIFICATIONS.
10. FOR BAR TYPE SP1, THE NO. OF TURNS "D" IS THE LENGTH "C" DIVIDED BY THE PITCH "B", PLUS 3 TURNS (TOTAL NUMBER OF CLOSED COILS), EXPRESSED AS THE NEAREST WHOLE NUMBER. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH SPIRAL UNIT.

PROPOSED STRUCTURE

TYPE: Continuous reinforced concrete, slab bridge, with reinforced concrete substructure.
SPANS: 35'-0", 43'-6", 35'-0"
ROADWAY: 52'-0" face to face of parapets.
LOAD FREQUENCY: C.F. = 2000 (57)
Adequate for AASHO alternate loading.
SKEW: 5°07'24" L.F.
WEARING SURFACE: 1" Monolithic concrete.
APPROACH SLABS: AS-1-54 (25' Long).
ALIGNMENT: 725' Curve left.
SUPERELEVATION: 0.042'/ft.
A.D.T. = 55,000 (C.V. ≈ 7%).

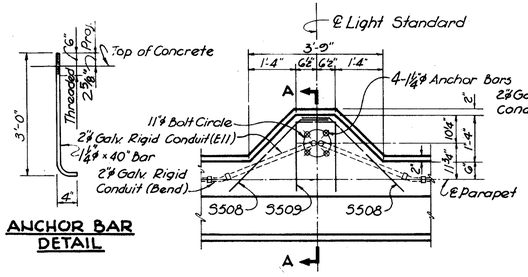
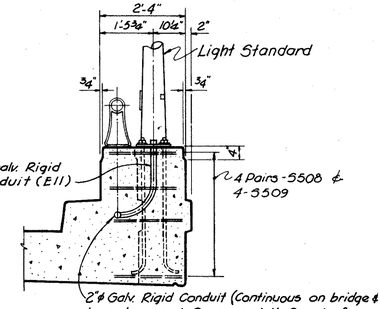
Materials in approach slabs are not included in the above estimated quantities.

Aluminum rail and supports, concrete parapet, reinforcing bars wholly within the concrete parapet and sponge rubber for parapet joints shall be included in item S-14 for payment.

* See Summary of Bridge Lighting Quantities, Sheet No. 265, for Details, Description, Unit & Quantity.



ANCHOR BAR DETAIL



SECTION A-A

LIGHT STANDARD PEDESTAL

Anchor bars are included with item S-25 for payment.

For additional details, see sh. 262.

GENERAL NOTES

REFERENCE shall be made to the following-

Standard Drawings: AR-1-57, revised 4-2-62
AS-1-54, revised 7-5-62
A-2-54, revised 12-1-54
CS-2-54, Sheets 1&2 of 2, revised 2-2-59

Supplemental Specifications: S-101, dated 7-12-62

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with current revisions thereof.

DESIGN LOADING ~CF 2,000 (57)

CONCRETE CLASS "C"-Basic unit stress 1,333 p. s. i.
CONCRETE CLASS "E"-Basic unit stress 1,133 p. s. i.

REINFORCING STEEL - ASTM A15, A16, A160, Deformed, Intermediate or Hard Grade. Basic unit stress 20,000 p. s. i. Except, spiral reinforcement may be plain, Structural Grade with basic unit stress of 18,000 p. s. i.

EXCAVATION QUANTITY includes the removal of fill material required for construction of the abutments.

UTILITY LINES: All expenses involved in relocating the affected utility lines shall be borne by the owners. The Contractor and Owners are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to a minimum.

PILES shall be driven to a minimum bearing capacity of 40 tons per pile for the abutments and piers.

SURFACE FINISH OF CONCRETE: The requirements of Sec. S-1.22 Rubbed Finish, shall apply to the following exposed concrete surfaces:

a. The entire superstructure except the top and bottom surfaces of safety curbs and roadways.
b. The entire surface of piers and the exposed surface of abutment wing walls.

MACHINE FINISH: At the Contractor's option the concrete deck may be finished by the use of a finishing machine.

NOTES:

1. For Reference Chord Layout, see Sheet No. 350
2. The embankment shall be placed and compacted up to the finished spill-thru slope and to the level of the subgrade for a distance of 200 feet back of the abutments, after which excavation shall be made for the abutment and for the earth bench.
3. Porous Backfill shall extend upwards to the approach slab and the paved shoulders, and to the surface of earth beyond paved shoulders, and outwards to the surface of the embankment slopes. Excavation therefor, in excess of that required for construction of the footing, shall be considered as paid for in the bid price per cubic yard paid for porous backfill.

NOTES

1. BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT WHERE THREE DIGITS ARE USED AND THE FIRST TWO DIGITS WHERE FOUR ARE USED, INDICATE THE BAR SIZE NUMBER.
2. BARS MARKED WITH AN ASTERISK TO BE INCLUDED FOR PAYMENT UNDER ITEM S-14, RAILING.
3. SPIRAL REINFORCING BARS: THE "LENGTH" SHOWN IN THE STEEL LIST FOR THE SPIRAL BARS IS THE DISTANCE FROM TOP OF THE FOOTING TO THE BOTTOM OF CAP, OR TO WITHIN 2" (±) OF THE TOP OF COLUMN FOR PIERS WITHOUT CAPS, TO THE NEAREST INCH.

   SPIRAL REINFORCING BARS SHALL NOT HAVE DEFORMATIONS BUT SHALL IN OTHER RESPECTS CONFORM TO ITEM S-4.

   FOUR STEEL CHANNEL, TEE OR ANGLE SPACERS WEIGHING APPROXIMATELY 0.68 LB. PER LIN. FT. OF SPACER SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE EQUALLY SPACED ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF THESE SPACERS, BASED ON 0.68 LB. PER LIN. FT., WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY OF SPIRAL BARS.
4. SEE SHEET 360 FOR BENDING DETAILS.

TYPE: Continuous rolled beam and welded plate girder with reinforced concrete deck and substructure.
SPANS: 55'-6"-70'-0"-61'-6"; 93'-0"-111'-3"-111'-3"-99'-0"; 113'-6"-113'-6"; 126'-0"-145'-9"-156'-0"-124'-0"; 120'-0"-145'-9"-156'-0"-118'-0"; 89'-0"-105'-0"-129'-0"-100'-0"-70'-0"
ROADWAY: 50'-0" face to face of 1'-0" safety curbs.
LOAD FREQUENCY: C.F. = 2000 (57) adequate for A.A.S.H.O. alternate loading.
SKEW: 0°
WEARING SURFACE: 1" Monolithic concrete
ALIGNMENT: 1°45' curve to left, 350'-0" spiral & Tangent.
APPROACH SLABS: AS-1-54 (25' long)

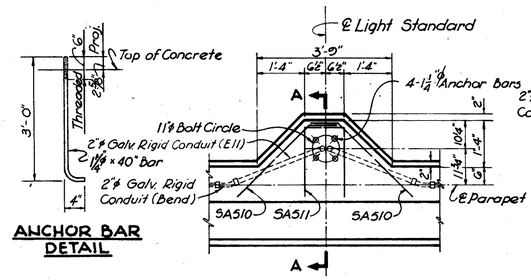
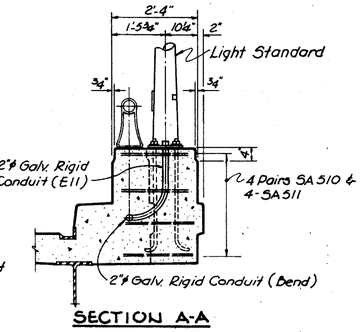
Materials in approach slabs are not included in the above estimated quantities.

* See Summary of Bridge Lighting Quantities, Sheet No. 265, for Details, Description, Unit & Quantity.

Aluminum rail and supports, concrete parapet, reinforcing bars wholly within the concrete parapet and sponge rubber for parapet joints shall be included in Item S-14 for payment.



ANCHOR BAR DETAIL



SECTION A-A

LIGHT STANDARD PEDESTAL

Anchor bars are included with item S-25 for payment.

For additional details, see sh. 262.

GENERAL NOTES

REFERENCE shall be made to the following:
Standard Drawings: AR-1-57, revised 4-2-62
AS-1-54, revised 7-5-62
SD-1-63, Sheet 1, 2, 3 & 4 of 4, dated 11-12-63
FSB-1-62, revised 1-15-63
RB-1-55, revised 2-2-59
Supplemental Specifications: S-307 dated 8-23-60
S-101, dated 7-12-62

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with current revisions thereof.

EXCAVATION QUANTITY includes the removal of fill material required for construction of the abutments.

DESIGN LOADING -CF 2, 000 (57)

CONCRETE CLASS "C"-Basic unit stress 1, 333 p. s. i.
CONCRETE CLASS "E"-Basic unit stress 1, 333 p. s. i.

STRUCTURAL STEEL-ASTM A36, basic unit stress 20, 000 p. s. i. (ASTM A 7, and A373 steel not permitted)

REINFORCING STEEL-ASTM A15, A16, A160, Deformed, Intermediate or Hard Grade. Basic unit stress 20, 000 p. s. i. Except spiral reinforcement may be plain, Structural Grade with basic unit stress of 18, 000 p. s. i.

Piles shall be driven to a minimum bearing capacity of 40 tons per pile for the abutments and piers.

PILE TEST LOAD shall be according to Item S-17 except that the maximum load required shall be 120 tons. First pile test load shall be applied to one of the piles at the West footing of Pier 16.

SHEETING AND BRACING: Before construction is started, eight sets of prints showing details of the sheeting and bracing to be used for excavation adjacent to the railroad track shall be submitted to the Director for approval by the Department of Highways and by the Railroad Company.

CONSTRUCTION CLEARANCE of 20'-0" vertically above top of the railroad rails and 8'-0" horizontally from the center of tracks shall be maintained at all times.

WELDING of structural steel shall be Class "A" except as otherwise shown. Welds shown as field welds may, at the option of the Contractor be made in the shop. Class "B" welds are shown thus: B>—

CONTINUOUS BEAM SHOP ASSEMBLY: Reference paragraph 4, Sec. S-7. 12 of the Construction and Material Specifications, if rolled beams are field spliced only at supports, for the purpose of checking the fit-up of weld joint preparation, only two adjacent beams need be shop assembled at a time in their correct, unloaded positions. All beams shall be assembled and match marked.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of concrete shall progress upgrade. The slab may be placed in sections between transverse construction joints which are parallel to transverse reinforcing steel and are located near the center of any span.

SURFACE FINISH OF CONCRETE: The requirements of Sec. S-1. 22 Rubbed Finish, shall apply to the following exposed concrete surfaces:
a. The entire superstructure except the top and bottom surfaces of safety curbs and roadways.
b. The entire surface of piers and abutments except bridge seats, backwalls and the face of spill-through abutments between outside beams or girders.

MACHINE FINISH: At the Contractor's option the concrete deck may be finished by the use of a finishing machine.

UTILITY LINES: All expense involved in relocating the affected utility lines shall be borne by the owners. The Contractor and Owners are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to a minimum.

ALIGNING RAILTOAD TRACKS: After the Contractor has completed all excavation and backfill adjacent to the railroad tracks in compliance with Sec. E-2. 08 of the Construction and Material Specifications, subject to the Supervision of the Railroad Company, nothing in Sec. E-2. 04, E-2. 08 or G-8. 07 of the specifications shall be construed to hold the Contractor liable for aligning and resurfacing the railroad tracks.

Item S-7. 10, High-Strength Steel Bolts, Nuts and Washers, paragraph two (2), shall be completely revised and the last sentence of paragraph four (4), revised to read as follows:
"In the final assembly of the parts to be bolted, drift pins shall be placed in a sufficient number of holes (not less than 25 percent for field erection) to provide and maintain accurate alignment of holes and parts, and sufficient bolts shall be installed and brought to a snug tight condition to bring the parts into complete contact. Bolts shall then be installed in any remaining open holes and tightened to a snug tight fit, after which all bolts shall be tightened completely by calibrated wrenches or by the turn-of-nut method. Drift pins shall then be replaced with bolts, tightened in the same manner."

"Bolt lengths determined by the use of Table No. 1 shall be adjusted to the next 1/4 inch length increment."

NOTES:

1. For Reference Line ~~Layout see Sh.~~ 362
2. Porous Backfill 1'-6" thick, full length of abutment shall extend up to the bottom of approach slab or paved shoulder. Excavation therefor, in excess of that required for construction of the abutment, shall be considered as paid for in the bid price per cu. yd. paid for porous backfill.
3. Special care shall be taken in placing reinforcing steel in the vicinity of the bridge seat so as to avoid interference with the drilling of anchor rod holes.
4. The embankment shall be placed and compacted up to the finished spill thru slope and to the level of the subgrade for a distance of 200 feet back of the abutment after which excavation shall be made for the abutment and piles driven.
5. Aluminum Railing tube ~~shall be~~ continuous for full length of wingwall. For railing ~~details~~, see Std. Dwg. AR-1-57.
6. For end dam details see Std. Dwg. SD-1-63 Shts. 2 & 4, dated 11-12-63

NOTES

1. For Bridge Framing Notes, see Sheet 402
2. For Details of End Crossframe F2, see Std. Dwg. SD-1-63, Sheets 2 & 4 of 4.
3. For End Preparation of Rolled Beams for Field Welding, see Std. Dwg. SD-1-63 Sh. 1 of 4.
4. For Details of Bearings E100, E200 and F200, see Std. Dwg. FSB-1-62, Rev. 1-15-63.
5. For Details of Bearing RB175, see Sheet 398.
6. For Details of Hinge Pins and Recessed Nuts, see Sheet 398.
7. For Details of End Crossframe F3, see Sheet 398.
8. ERECTION PROCEDURE: The Contractor shall submit to the Director for approval, 3 prints showing proposed erection procedure for this Unit, which shall be co-ordinated with the erection procedures for all other Superstructure Units of this bridge and which shall incorporate the following items:
   a) Erection of Beams in Unit 1 may begin following the erection of girders in Unit 2 between Piers 3 and 4 with sufficient crossframes bolted in place to insure stability and connections made to Fixed Bearings at Pier 4.
   b) Erect Beams in Unit 1 providing adequate clamps and blocking to prevent movement at Hinge 12 adjacent to Pier 3 during this phase.
   c) Raise the end of Beams in the middle span of this Unit at Pier 1, 1½ inches.
   d) Butt weld Beam flanges and web at Pier 2 using the following sequence: make two passes on the web, then two on each flange; repeat, using one or two passes at each location, until welds are completed.
   e) Weld top and bottom moment plates at Pier 2.
   f) Lower end of Beam to final position at Pier 1.
   g) Make splice at Pier 1 in the same manner; raising the end of the Beams 1½ inches at Abutment 1.
   h) Install cross bracing and remove temporary clamps and blocking at the Hinge.

ELEVATION LAYOUT, DEFLECTION & CAMBER

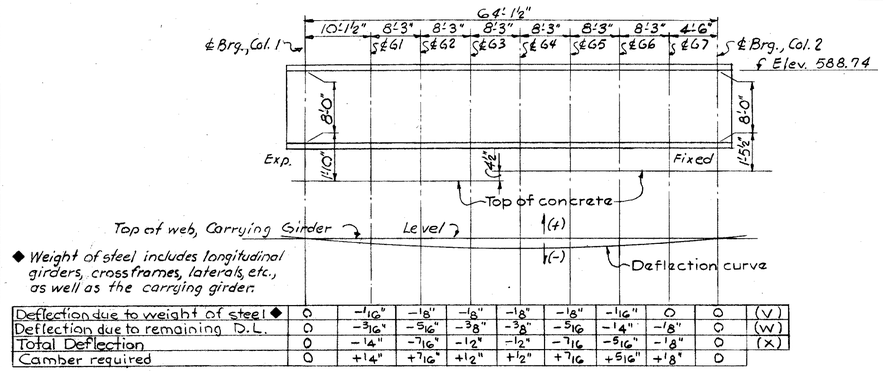
CARRYING GIRDER AT PIER 20



◆ Weight of steel includes longitudinal girders, crossframes, laterals, etc., as well as the carrying girder.

BRIDGE FRAMING NOTES

1. For GENERAL NOTES, see Sh. 363.
2. For REFERENCE LINE LAYOUT, see Sheet 362.
3. PIER CENTERLINES are in every case perpendicular to centerlines of beams or girders directly supported by the pier.
4. WELDING shall be Class A unless otherwise noted. Class B welds are shown thus: B
5. WELDED FLANGE SPLICE details for plate girders are shown on Sheet 400.
6. CROSSFRAMES All intermediate crossframes shall be perpendicular to the beam or girder webs and may be perpendicular to the flanges, except as shown or noted on the Plans. End crossframes shall be parallel either to centerline bearing at Abutment or to centerline Hinge at Hinges, and shall be vertical. For details of end and intermediate crossframes for Units 2 thru 6, see Sheet 394. For end crossframe details not shown, see Std. Dwg. SD-1-63, Sheets 2 & 4 of 4.
7. LATERALS For typical details of lateral bracing for Units 3 thru 6, see Sheet 395.
8. BEARING STIFFENERS shall be placed vertically.
9. WEB SHOP SPLICES at locations other than those shown on the Plans shall require the approval of the Director before fabrication.
10. BUTT WELDS shall be radiographically examined in accordance with Supplemental Specification S-307, dated 8-23-63.
11. INTERMEDIATE STIFFENERS shall have contact bearing with the top flange within Region T, but may have a clearance not exceeding ⅛" at the bottom flange. Intermediate stiffeners shall have contact bearing with the bottom flange within Region B, but may have a clearance not exceeding ⅛" at the top flange. Adequate care shall be exercised, in shop painting all junctions of intermediate stiffeners and flanges, where contact bearing is not provided, to make certain that paint is forced thru such openings from one side to the other.
12. END DAMS For details of deck and sidewalk end dams, see Std. Dwg. SD-1-63, Sheets 2, 3 & 4 of 4, except as modified by details shown on the Plans; in particular, Sheet 410.
13. SCUPPERS & GUTTERS For locations of scuppers, see Sheets 412 thru 414. For details of standard scuppers and bulb angle gutters, see Std. Dwg. SD-1-63, Sheets 3 & 4 of 4. For details of special scuppers and deck drainage collector system, see Sheets 412 thru 414.
14. BEARING ASSEMBLY Before final assembly, the trepanned surfaces of the bronze bearing plate and the opposing surfaces of adjacent steel plates shall be coated with a lubricant similar to that in the recesses.
15. SOLE PLATES need not be beveled unless the gradient of the girder flange is 4% or more, or unless shown on the Plans.
16. MATERIALS
    a) Structural Steel for Hinge Plates and Fill Plates of Hinge Details, see Sheets 393, 396 & 399; shall conform to the requirements of ASTM A36, copper-bearing Hinge Pins shall conform to the requirements of ASTM A-108.
    b) Structural Steel for Plates, WF Section Bars, Turned Bolts, Anchor Rods and Anchor Bolts used in bearing assemblies shall conform to the requirements of ASTM A36. Bearing Pins shall conform to the requirements of ASTM A-10
    c) Self-lubricating bronze bearing plates and lubricant therefor shall conform to all requirements set forth on Std. Dwg. FSB-1-62, Rev. 1-15-63, unless otherwise shown or noted on the Plans

NOTES

1. For Framing Plan - Unit G, see Sheet 40
2. For Details of Bearings E100, E250, E30 and F300, see Std. Dwg. FSB-1-62, Rev. 1-15
3. For Details of Bearing RB225, see Sheet 39
4. For Details of Carry Girder at Pier 20, see Sheet 406.
5. For Details of Bearings for Carrying Girde see Sheet 407.

NOTES

1. For BRIDGE FRAMING NOTES, see Sh. 402.
2. For FRAMING PLAN, Unit 2, see Sh. 394.
3. All diaphragms and stiffeners shall be vertical and have contact bearing against the top of flange, unless, welding to flange is required.
4. Sole ℞s shipped on girder must be protected against damage in transit.
5. For Deflection and Camber, see Sh. 395.
6. Butt welds on girder flange plates shall be ground flush, the finish grinding being parallel to the direction of stress.
7. Butt welds shall be radiographically examined in accordance with Supplemental Specifications No. S-307, dated 8-23-60.
8. Scribe center-lines of carrying girder and longitudinal girders to extend beyond edges of shoes for control of setting shoes in the field. See Sh. 395.

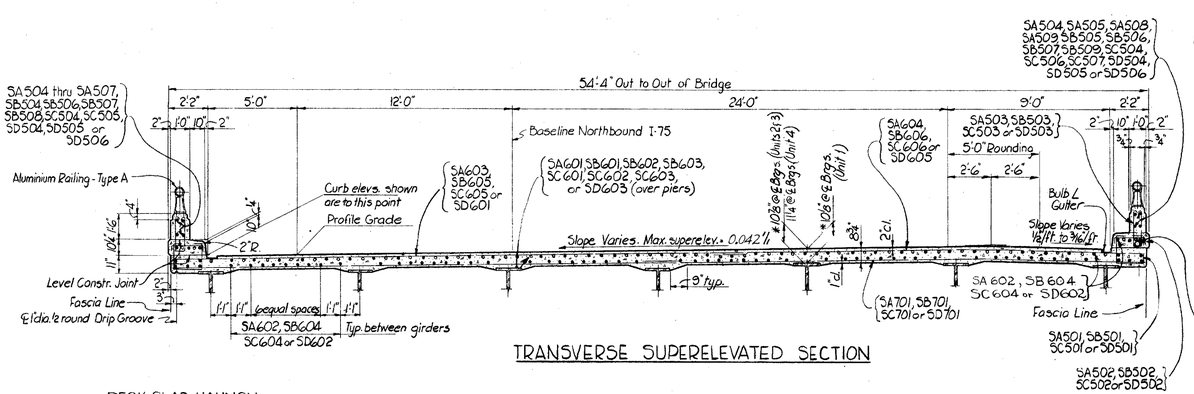
PLAN-UNIT 1



TRANSVERSE SUPERELEVATED SECTION

DECK SLAB HAUNCH:

The haunch in the superelevated deck slab adjacent to the top of steel beams or girders, which is shown as 9" wide, may vary from this dimension between the limits of 6" and 12" on the low side, and between 9 1/2" on the high side. Except on the high side, the maximum slope shall not exceed 3" per foot. Payment for deck slab concrete will be based on the 9" width.

* These are nominal dimensions. The quantity of deck concrete to be paid for will be based on these dimensions, even though deviations from them may be necessary because the top flange of the beams or girders may not have the exact camber or conformation required to place it parallel to the finished grade. Deduction shall be made for volume of encased steel plates as per Sec. 5-1.25 of the Construction & Material Specifications.

PAVEMENT ELEVATIONS

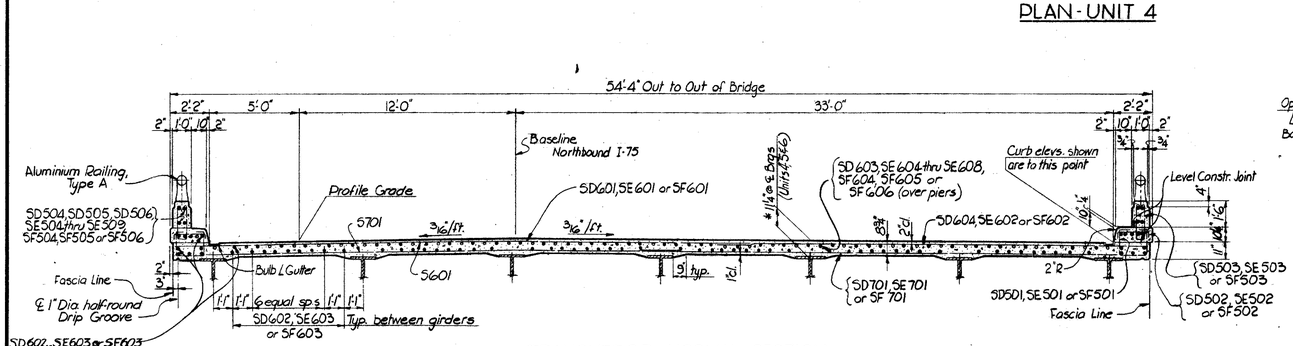
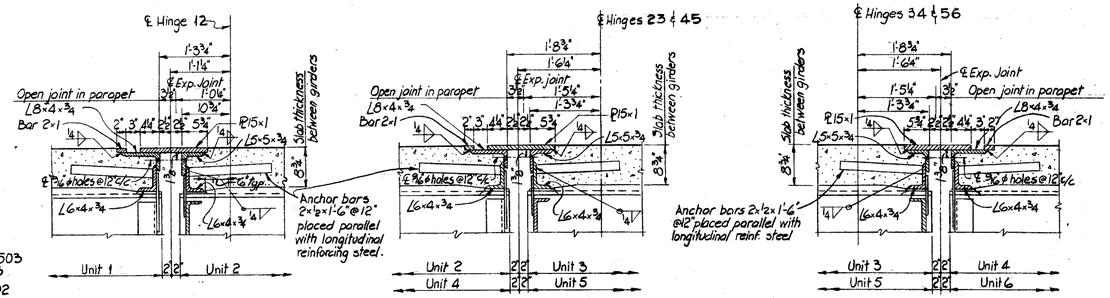
PLAN - UNIT 4



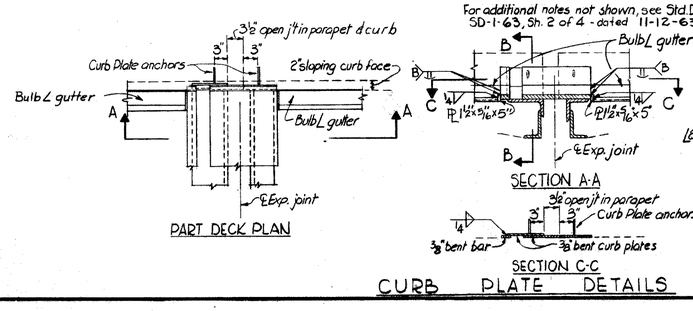
TRANSVERSE NORMAL SECTION



Note: Use ⅞" bevel fill under 6x4 ∠ for units 4, 5 & 6

EXPANSION JOINT DETAILS

For additional notes not shown, see Std. Dwg. SD-1-63, Sh. 2 of 4 - dated 11-12-63



CURB PLATE DETAILS

DECK SLAB HAUNCH:

The haunch in the normal deck slab adjacent to the top of steel girders, which is shown as 9" wide, may vary from this dimension between the limits of 6" & 12", except that the maximum slope, shall not exceed 3" per foot. Payment for deck slab concrete shall be based on the 9" width.

* This is a nominal dimension. The quantity of deck concrete to be paid for will be based on this dimension, even though deviations from it may be necessary because the top flange of the girders may not have the exact camber or conformation required to place it parallel to the finished grade. Deduction shall be made for volume of encased steel plates as per Sec. 5-1.25 of the Construction & Material Specifications.

For NOTES, see Sheet No. 408

NOTES

1. FIGURES IN CIRCLES SHOW BAR TYPES.
2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. "J" DIMENSION ON HOOKS TO BE SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOK SIZE, OTHERWISE STANDARD HOOKS ARE TO BE USED.
4. WHERE "J" IS NOT SHOWN "J" WILL BE KEPT EQUAL TO OR LESS THAN "H." WHERE "J" CAN EXCEED "H" IT SHOULD BE SHOWN.
5. "H" DIMENSION ON STIRRUPS TO BE SHOWN WHERE NECESSARY TO RESTRICT HOOKS.
6. ALL BENDS SHOWN ARE BENT AROUND A STANDARD MANDREL, EXCEPT STIRRUPS S11, TIES T3, SPIRALS SP1 AND WHERE RADIUS "R" IS INDICATED.
7. RADIUS, DIMENSION "R" IS TO OUTSIDE OF BAR.
8. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
9. FOR STANDARD HOOK DIMENSIONS, SEE SECT. S-405 OF THE SPECIFICATIONS.
10. FOR BAR TYPE SP1, THE NO. OF TURNS "D" IS THE LENGTH "C" DIVIDED BY THE PITCH "B", PLUS 3 TURNS (TOTAL NUMBER OF CLOSED COILS), EXPRESSED AS THE NEAREST WHOLE NUMBER. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH SPIRAL UNIT.

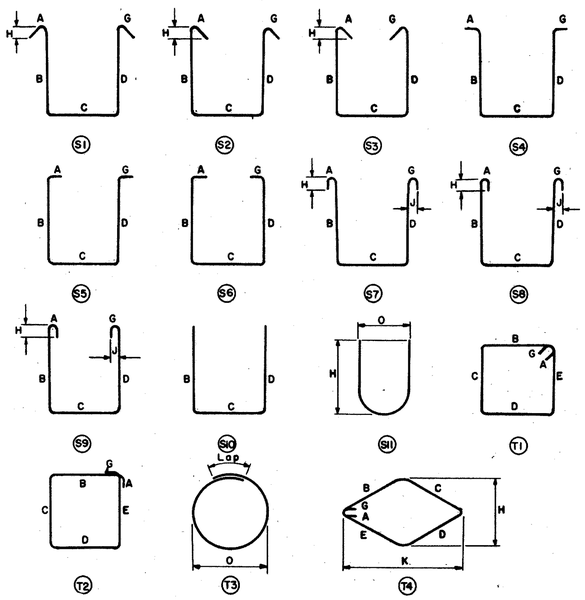
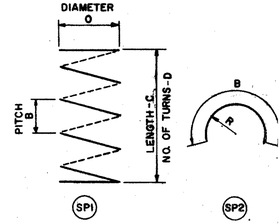
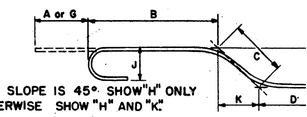
⑮ NOT USED







WHERE SLOPE IS 45° SHOW "H" ONLY
OTHERWISE SHOW "H" AND "K"

ENLARGED VIEW SHOWING
BAR BENDING DETAILS

NOTES

1. FIGURES IN CIRCLES SHOW BAR TYPES.
2. ALL DIMENSIONS ARE OUT TO OUT OF BAR.
3. "J" DIMENSION ON HOOKS TO BE SHOWN ONLY WHERE NECESSARY TO RESTRICT HOOK SIZE, OTHERWISE STANDARD HOOKS ARE TO BE USED.
4. WHERE "J" IS NOT SHOWN "J" WILL BE KEPT EQUAL TO OR LESS THAN "H." WHERE "J" CAN EXCEED "H" IT SHOULD BE SHOWN.
5. "H" DIMENSION ON STIRRUPS TO BE SHOWN WHERE NECESSARY TO RESTRICT HOOKS.
6. ALL BENDS SHOWN ARE BENT AROUND A STANDARD MANDREL, EXCEPT STIRRUPS S11, TIES T3, SPIRALS SP1 AND WHERE RADIUS "R" IS INDICATED.
7. RADIUS DIMENSION "R" IS TO OUTSIDE OF BAR.
8. THE LENGTH OF BENT BARS IS MEASURED ALONG THE CENTERLINE.
9. FOR STANDARD HOOK DIMENSIONS, SEE SECT. S-4.05 OF THE SPECIFICATIONS.
10. FOR BAR TYPE SP1, THE NO. OF TURNS "D" IS THE LENGTH "C" DIVIDED BY THE PITCH "B", PLUS 3 TURNS (TOTAL NUMBER OF CLOSED COILS), EXPRESSED AS THE NEAREST WHOLE NUMBER. 1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH SPIRAL UNIT.
