

# HAS-22-18.75

## US 22 4-Lane Widening Study

PID 115278

Harrison County

Submitted to ODOT District 11  
April 2022

### **Project Summary**

ODOT District 11 requested Engineering Associates complete a Preliminary Engineering Study (PES) to widen US 22 in Harrison County, Ohio, between approximate SLM 18.75 and SLM 21.70, to a four-lane divided section of roadway. This section of roadway is currently a two-lane roadway, but adjacent sections to the north and south are four-lane divided. The PES developed construction limits for the proposed work, evaluated right of way needs for the project, and determined a construction cost estimate for future budgeting purposes.

### **Design Approach**

The original HAS-22-18.97 construction plans from the early 1960s constructed this portion of the roadway as a 2-lane road; however, the right of way plans acquired adequate right of way for a 4-lane divided median roadway. The original design constructed the two-lane roadway in the location where the eastbound lanes of the future 4-lane roadway would be. The PES completed the conceptual level design of the westbound half of this roadway to verify whether adequate right of way is available for the project. Aerial images and lidar mapping were downloaded from the OGRIP website to be used as the basemapping for the study. The horizontal and vertical alignments were set to closely match existing from record plans so the existing 2-lane roadway could be resurfaced and become the proposed eastbound lanes. New full depth pavement will be constructed for the westbound lanes. Existing at-grade intersections will be maintained, and left turn lanes will be provided at each intersection. The proposed roadway was designed to meet 70 mph design criteria in case speed limits are increased in the future.

### **Typical Section**

The existing US 22 typical section consists of one 12-foot lane in each direction with eight-foot paved shoulders. The proposed typical section includes two 12-foot lanes in each direction with 8-foot wide outside shoulders, 4-foot wide median shoulders, and a 40-foot grass median. The proposed typical section will utilize the existing two-lane roadway as the eastbound lanes of the proposed four-lane divided highway. The existing pavement will be planed ( $\pm 3\frac{3}{4}$ ) and resurfaced. Four feet of pavement will be removed for the median shoulder. New full depth pavement will be provided for the westbound lanes. The pavement build-up and typical sections (US 22 and side roads) are included in Appendix A. The proposed typical section matches the existing US 22 typical section at the eastern and western project limits. No subgrade stabilization was included on the project since the existing 2-lane road will be resurfaced, and a significant portion of the proposed westbound lanes will be constructed on new fill material. The pavement design was developed based on 8700 ADT with 30% trucks.

### **ROW**

The proposed construction limits generally stay within the existing right of way except at several locations. Near Sta 1130+00 just west of TR 177, the 2:1 cut backslope extends beyond the right of way and construction limits and gets close to an existing building. The grading lines near Sta

1143+00 stay within existing right of way, however, construction limits do not. Finally, construction limits at Sta 1058+50 cut across the corner of the existing right of way. At each of these locations, we anticipate that slightly revised grading slopes, storm sewers, adjusting the ditch profile, or adjusting the westbound roadway profile grade would all be options that could be investigated during final design to eliminate the need for additional right of way on this project.

### **Utilities**

Utility impacts appear to be minimal along the corridor. Overhead power lines generally cross perpendicular to the roadway and poles are typically beyond the existing right of way.

### **Maintenance of Traffic**

Traffic will be maintained on the existing two-lane roadway during earthwork and paving operations for the proposed westbound lanes. The work zone will be protected with portable barrier and construction access points with impact attenuators were assumed at ½ mile intervals along the project. Traffic will be shifted to the newly constructed westbound lanes while the eastbound lanes are planed and resurfaced. The majority of project work can be completed in two main phases of construction.

### **Embankment/Excavation**

Earthwork will be the most significant cost driver for this project. Cross sections were analyzed every 100 feet to determine accurate earthwork quantities. The existing plans and soil borings show predominantly shale and limestone in the original borings. Rock excavation was assumed where the existing plans showed 1:1 cut slopes. Proposed grading with 1:1 slopes, similar to existing, was provided in these areas for the westbound lanes. Rock excavation volumes were calculated and itemized separately in the cost estimate. Custom benching into the existing slopes was also factored into both the excavation and embankment quantities. ODOT bid tabs, summary of contracts awarded, and Estimator prices were analyzed to determine unit prices for the cost estimate.

### **Post Construction BMPs**

We anticipate the post construction BMPs utilized on this project will be vegetated filter strips along the 4:1 grass median foreslopes. The treatment percentage is 20% and the estimated EDA is approximately 55 acres. The filter strips will need to be approximately 7500 feet in length. The vegetated filter strips added approximately 3000 cubic yds of Item 659 Topsoil and 27,000 square feet of Item 670 Slope Erosion Protection.

### **Median Drainage**

Median catch basins were assumed at the low point of each sag vertical curve, the high side of each intersection, and the high side of the bridge. Additional catch basins were spaced at

approximately 1000' intervals which results in an average median ditch flow depth of approximately four inches. Final median catch basin spacing must be updated with final design. Each median catch basin outlets to the toe of slope with 24" conduit using broken back, Type F conduit when on high fills. Median catch basins within major rock cut sections will be connected via a median trunkline storm sewer until a suitable outlet is found. This resulted in additional Type C conduit and CB-4 catch basins.

### **Culverts**

All culverts will be replaced to ensure drainage is functioning properly along the corridor. Proposed culverts will be jacked and bored under the existing embankment and then extended via traditional open cut methods before completing the proposed embankment for the westbound lanes. Existing culverts will be plugged and filled due to the high fill after completion of the proposed culverts.

### **Traffic Control**

New thermoplastic pavement markings were included for the mainline and sideroads. Miscellaneous signing for the side road stop control and intersection signing was also included in the estimate.

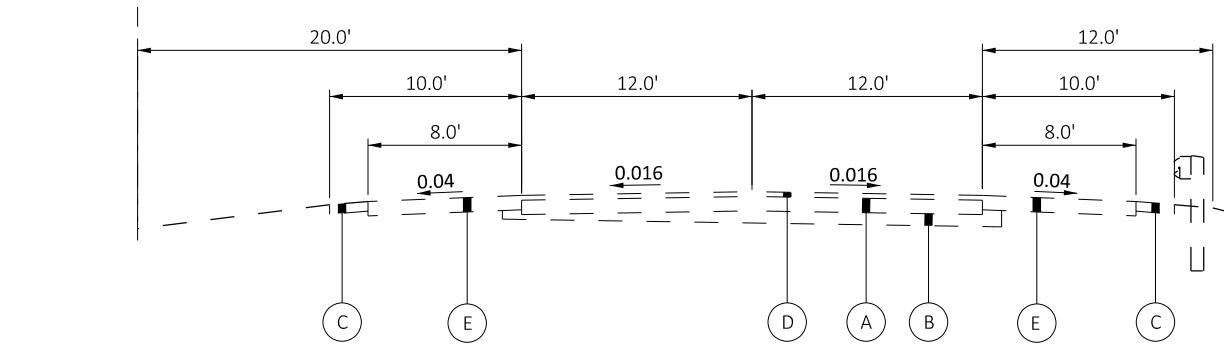

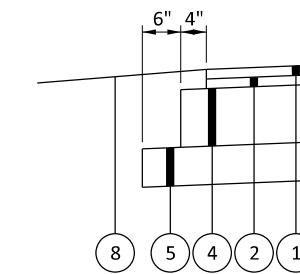

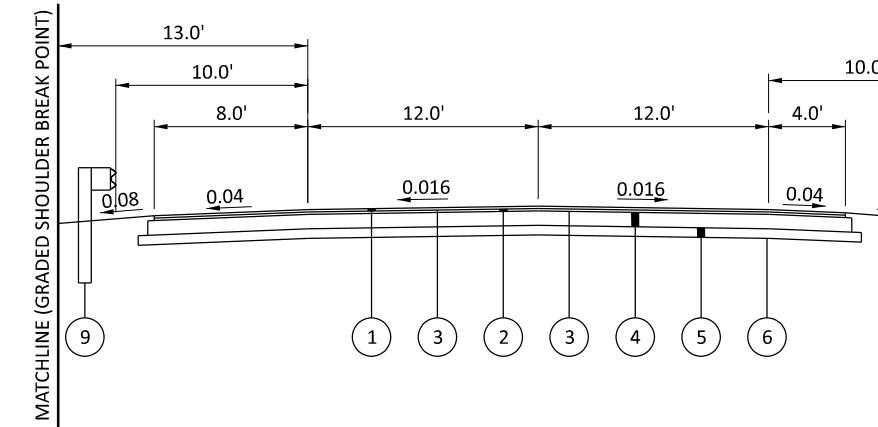

### **Construction Cost Estimate**

The construction cost estimate of \$34,200,000 is based on ***current 2022 dollars***. No inflation factor has been added since a proposed construction date has not been determined at this time. A design contingency of 20% was included to account for miscellaneous items that will not be determined until final design is completed. Nearly 70% of the project cost is from excavation/embankment and pavement. Current inflation for diesel fuel and asphalt products will have a significant impact on the cost of this project and could vary dramatically in the future.

## **Appendix D – Preliminary Construction Cost Estimate**

## Estimate HAS-22-18.75

Estimated Cost:\$34,196,088.90

Contingency: 0.00%

**Estimated Total: \$34,196,088.90**

Widen 3 mi of US 22 from 2-lane to 4-lanes w/ grass median, new drainage & new left structure for WB lanes over RR.

**Base Date: 04/15/22**

Spec Year: 19

Unit System: E

Work Type: ASPHALT

Highway Type:

Urban/Rural Type: RURAL CLASS

Season: SUMMER

County: HARRISON

Latitude of Midpoint: 0

Longitude of Midpoint: 0

District: 11

Federal/State Project Number: N/A

Estimate Type: Preliminary Study

*Prepared by Engineering Associates on 04/15/22*
