We checked with Jeff about this water work. He had excellent as-built records and the following breakdown, information and plan details on this work. Can we use this and upload it into the PID 89194 files to close this one? I am going to save these into the CO records too. These are the records CWD has from our work in their files too.

THX Dave.

- We are confirming the waterline work with Jeff Simons – GPI. He was the ODOT inspector onsite for this force account work. Neither Kirk or I are aware of any changes, but we will confirm.
- If you send back the graphic disk to me at the PMO, I can track and make sure the copies get uploaded by Curtis to the Q drive.
