The Standard Specifications of The State of Ohio, Department of Highways including changes and Supplemental Specifications listed in the proposal shall govern this improvement.

I hereby approve these plans and declare that the making of this improvement will not require the closing to traffic of the highway and that provisions for maintenance and safety of traffic will be as set forth in these plans and estimates.

The right of way for this improvement will be provided by The State of Ohio.

GENERAL NOTES

GENERAL

DESIGN SPEED

Design speed on this project is 60 M. P. H. on new pavement and 50 M. P. H. on pavement to be left in place.

FIELD OFFICE

The contractor shall provide a suitable field office in accordance with Section S-0.01 (b), Structures General, having a minimum floor area of 500 sq. ft. The contractor shall have a telephone installed and maintained during the construction of this project.

DATUM

All elevations are referred to U.S.C. & G.S. Datum.

STATIONING

In general, stationing indicated on the Plans is along the centerline of the new lane regardless of the direction of flow of traffic. In locations where the two lanes are not concentric both lanes are stationed individually. The northbound lane is indicated by the suffiix "N" and the southbound lane by the suffix "S" after the stationing.

TRAFFIC

At least (10) days before any interruption of the normal flow of traffic within the project limits, the contractor shall submit to the Director in writing his proposed methods and procedures planned for the maintenance of traffic throughout the life of the contract.

The Contractor, to the satisfaction of the Director, shall plan and conduct his operations so that two way traffic, without detours, shall be maintained at all times consistent with the requirements of Sec. T-35.23 and as set forth below.

The Contractor shall provide temporary cross-overs between new and existing pavement as required to maintain traffic, suitable access shall be provided to all driveways and side roads at all times, as approved by the Engineer.

Aggregate and chloride used for maintaining local traffic shall be applied on temporary roadways as directed and in the amounts requested by the Engineer (see General Summary for quantities) and shall be paid for at the unit price bid for Item T-10, *Traffic Compacted* Surface Course and Item M-10 Furnishing and Applying Calcium Chloride or Calcium Magnesium Chloride. The hardness and soundness requirements of the Construction and Material Specifications shall be waived for the traffic *Compacted* surface course. The cost of all additional requirements to maintain traffic shall be included in the Lump Sum price bid for Maintaining Traffic and no additional allowance will be made therefor.

Within the City of Hamilton all work beyond the limits of the existing pavement shall be completed to the extent that it may be placed in service prior to beginning work in areas of existing pavement. Construction in areas of existing pavement shall be completed on one half of the roadway at a time to permit the maintenance of two-way traffic at all times without detours.

At the Shaffer Creek culvert the contractor shall remove the wing walls on the right side of the existing bridge, construct the culvert under the northbound lane and open these lanes to traffic with a traffic *Compacted* surface course applied over a width of approximately twenty (20) feet, prior to removing the remainder of the existing bridge, and completing the culvert construction.

It will be necessary to construct a temporary cross-over from Station 244+00 on the northbound lane to Station 248+00 on the southbound lane. The construction of this cross-over shall be as described above for traffic *Compacted* surface course.

It will also be necessary to construct a temporary cross-over from Station 429+50 on the southbound lane to Station 432+50 on the northbound lane. The construction of this cross-over shall be as described above for traffic *Compacted* surface course.

No work shall be done on the modifications to the existing Gregory Creek Bridge until the new southbound lane has been completed and is opened to traffic. During construction of the above modifications, traffic will be rerouted over the new southbound lane.

Payment for construction, maintenance and subsequent removal, where required, of temporary traffic lanes is included in the lump sum price bid for "Maintaining Traffic".

ROADWAY

REMOVAL AND DISPOSAL OF UNSUITABLE MATERIAL

It is anticipated that certain areas will be encountered where the existing material is unsuitable for use as embankment or to support embankment. The Contractor shall make explorations for, and removal of, unsuitable material as directed by the Engineer. The Contractor is referred to Item E-1, Roadway Excavation, for basis of payment, method of disposal, etc. When approved by the Engineer, unsuitable embankment material may be wasted within the limits of the R/W, but outside roadway construction limits, providing it is covered with at least one foot of earth and left in a sightly condition. *All material so removed shall be measured and paid for as Item E-1, Roadway Excavation.*

REMOVALS (MISCELLANEOUS)

Building foundations, steps, walls, or other similar structures shall be excavated to a depth of three feet (3') below the proposed subgrade, or twelve inches (12") below finished surface if located outside the pavement limits but within the R/W or easement lines.

The removal of existing rigid concrete pavement either with or without surface courses shall be paid for at the contract unit price bid per square yard for Item E-8, Removal and Disposal of Existing Pavement. The removal of existing flexible pavement without rigid base shall be paid for at the contract unit price bid per cubic yard for Item E-1, Roadway Excavation. Wherever a portion of pavement remains in place, the cutting and trimming shall be neat and to the line shown on the drawings. No extra payment shall be made for cutting and trimming.

Removal of existing sidewalk when replaced by new sidewalk shall be paid for in the unit price bid for the new sidewalk, I-13. Removal of the existing sidewalk not to be replaced by new sidewalk shall be paid for as E-8, Removal and Disposal of Existing Sidewalk.

Wherever the proposed concrete sidewalk adjoins or abuts an existing sidewalk the existing walk shall be cut and trimmed to a neat line as shown on the Plans. Payment for cutting and trimming shall be included with sidewalks and shall be paid for at the contract unit prices bid for Item I-13, Sidewalks and Concrete Steps.

The contents of all existing privies or septic tanks, upon which embankment is to be placed, shall be removed and the empty pit backfilled with material meeting the requirements of Section E-1.08. The cost of removing and disposing of contents shall be paid for at the unit price bid per cu. yd. of "Roadway Excavation, Item E-1".

The removal and disposal of any existing pavement, sidewalk, head walls, pipe, curbs, foundations, retaining walls, concrete or masonry posts, wells, septic tanks, curb drains or other masonry, street railway rails and ties, guardposts, flagpoles, fences, billboards, or other similar items, lying within or below the limits of the Roadway Excavation, Item E-1, or Excavation for Structures, Item E-2, and not specifically paid for under a separate item are classified as excavation and are paid for as additional excavation under the excavation item of which they are a part.

REMOVAL OF TREES AND STUMPS

Trees or stumps, shall be removed or preserved as indicated on the Plans by the following symbols:

Trees or stumps to be removed. . .
Trees to be preserved . . .

The number of trees or stumps to be removed, as indicated by the above symbol, is approximate and the State of Ohio reserves the right to order the removal of additional trees or stumps, even though these trees or stumps are not indicated on the Plans or are indicated to be preserved.

Payment for the removal of these additional trees or stumps is included in the lump sum bid for the Removal of Trees and Stumps, Item E-9.

SUBBASE ITEM I-22

All 9" T-71 pavement throughout the job shall have a subbase of I-22 as shown on the Typical Sections. The I-22 shall be either Grade A, B, C or D.

CONSTRUCTION LAYOUT STAKES
See note in proposal describing work included in this Lump Sum pay item.

ROADWAY (CONT'D)

ROUNDING OF CORNERS ON CROSS SECTIONS

The rounded corners, shown on *Standard Drawing R-1* apply to all cross sections even though otherwise shown in these plans.

SIDEWALK EXPANSION JOINTS

In addition to the expansion joints specified in Section 1-13.06 of the Construction and Material Specifications, 1/2" of premolded expansion joint shall be provided wherever the sidewalks or median pavement, abut longitudinal curbs or other permanent structures. One layer of 1/2" material may be used in lieu of the two 1/4" layers specified in Section 1-13.06. Payment for the 1/2" premolded expansion joint material is included in the price bid per square foot for Item 1-13, Sidewalks, or when used for median pavement, payment is included in the price bid per square yard for Item I-21, Portland Cement Concrete Median Pavement.

Existing street signs, traffic markers, and other similar objects within the limits of the construction shall be removed and stock piled as directed by the Engineer. Payment for removal and stock piling of these items shall be included in the contract price bid per cubic yard for Item E-1, Roadway Excavation.

FILLING OF BASEMENTS, WELLS, ETC.

All basements, wells, cisterns, holes resulting from the removal of storage tanks, etc. located wholly or partly within the right-of-way limits of this project except in excavation areas shall be filled to the contour of the surrounding ground and compacted as per Item E-1.08. This work shall be done as soon as possible in order not to leave an unsightly and dangerous condition any longer than is absolutely necessary. *Payment for the above shall be included in the unit price bid for Item E-1, Roadway Excavation.*

FERTILIZING AREAS TO BE SEEDED OR SODDED

All areas to be seeded, under Item L-9, or sodded, under Item L-10 shall have commercial fertilizer (10-6-4 mix) applied at the rate of twenty (20) pounds per 1000 square feet.

PLACING SOD

Sod shall be placed so that the top of the sod coincides with the finished surface as shown on the cross sections. All earthwork necessary to accomplish the above is included in the contract unit bid per square yard of sod.

SEEDING QUANTITIES

Quantities for seeding are calculated for the soil areas between lines ten feet (10') outside the construction limits as shown on the cross sections or to the R/W line if such line is less than ten feet from the construction limits. All areas outside these limits where the vegetative growth has been injuriously disturbed or destroyed by the contractor, shall be restored and seeded in accordance with the provisions of Item L-9 by the contractor at his own expense.

Berms along the inside edge of existing pavement which will become a portion of the median area shall be removed and restored with *embankment material and/or salvaged topsoil, at the direction of the Engineer,* and seeded in accordance with the provisions of Item L-9 Seeding and Protecting Roadway Areas.

The mixture of seed to be used in rural areas shall be as specified under Item L-9.

The seed mixture for urban and residential areas as designated by the Engineer, shall be as follows:

20% Kentucky Bluegrass (Poa pratensis)
20% *Kentucky 31 Fescue (Festuca elatior, var. Ky. 31)*
40% Creeping Red Fescue (Festuca rubra)
15% Red Top (Agrostis alba)
5% White Dutch Glover (Trifolium repens)

GUARD RAIL

Guard rail shall be flared to meet bridge railing in such a manner that the change in alignment of the guard rail will not exceed one (1) foot in 10 feet.
The removal of any guard rail or guard rail posts lying within the limits of roadway excavation or embankment (and not specifically paid for under a separate item) is included in the Contract Unit Price per cubic yard bid for Item E-1 Roadway Excavation. All resulting materials shall become the property of the Contractor and shall be disposed of by him at no extra cost to the State, except steel rail on all existing steel beam type guard rail shall be stored on the right-of-way at the disposal of the State Maintenance Forces.

GENERAL NOTES (CONT'D)

PAVEMENT

SUPERELEVATION

Superelevated curves shall be built without crown. The crown shall be worked out of the pavement in accordance with the elevations shown in the Superelevation Tables.

PLACING AND FINISHING ASPHALTIC CONCRETE

The requirements under Sec. T-35.18 for mechanical equipment for placing and finishing asphaltic concrete are hereby waived for areas less than 5 feet in width or where surface is deformed, and the asphaltic concrete may be spread and finished by acceptable hand methods. Dump boards will be required if spread and finished by hand method.

The requirements under Sec. T-35.19 for rollers are hereby waived to permit the use of but one (1) roller, meeting the requirements of the specifications.

ASPHALTIC CONCRETE BASE COURSE.

Asphaltic Concrete base course may be constructed of Type "A" surface course composition *at no additional cost to the State.*

SUBBASE COURSE

In the final finishing of slopes and ditches, care shall be exercised to assure that the exposed edge of the subbase course will be left free of earth cover that would impede free drainage.

HAND FINISHING

Hand finishing will be permitted as per Section T-71.211 for the reinforced Portland cement concrete pavement on this project at the following locations:

1. Intersections and cross-overs
2. Sections where the sharp curvature prevents the use of finishing machine.
3. Sections where the maintenance of traffic requires hand finishing.
4. Variable width lanes which in the opinion of the Engineer require hand finishing.

EXPANSION AND CONTRACTION JOINTS

Where transverse joints are located closer than 10 feet to the regular blockout joints around catch basins, manholes and water valves, the blockout joints shall be continued to the transverse joint. Similarly where longitudinal joints are located closer than 2 feet to the regular blockout joints around catch basins, manholes and water valves, the blockout joints shall be continued to the longitudinal joints.

TREATMENT OF EXISTING PAVEMENT AT END OF NEW PAVEMENT

At terminal points between new and existing pavements any difference in grade between the two pavements shall be corrected by filling with T-35, Type C, as approved by the Engineer. Where the new pavement is above the existing pavement the difference shall be corrected by filling over the existing pavement as indicated on the Plans. Where the new pavement is below the existing pavement the existing pavement shall be removed to a depth at least 1 1/4 inches below the new pavement.

Removal of existing pavement as described above shall be paid for at the contract unit price for Item E-8, Removal and Disposal of Existing Wearing Course. *An estimated quantity of 300 Sq. Yds. is included in the General Summary.*

Filling shall be paid for at the contract unit price for Item T-35 Asphaltic Concrete Surface Course.

SEALING JOINTS WITH EXISTING PAVEMENT

Where *asphaltic concrete base or leveling courses abut* existing pavement of a rigid type an item of B-85, Sealing Vertical Face of Existing Pavement has been incorporated in these plans. Where proposed *T-35 surface abuts any proposed or* existing pavement, the cost of Sealing the resulting joint shall be included for payment in the price bid for Item T-35 Asphaltic Concrete Surface Courses per Item T-35.18 of the Construction and Material Specifications.

FLEXIBLE FORMS

Approved flexible forms shall be used for construction of circular pavement edges having a radius of 100 ft. or less, circular concrete curbs and concrete curb transitions of short radii.

PAVEMENT (CONT'D)

RESURFACING

Where crushed aggregate is used as a wedge course to build up the shoulder to meet the edge of the new pavement, compaction of the subgrade under the crushed aggregate shoulder as specified under Sec. I-18.03 is hereby waived on this project.

The contraction joints in the pavement shall extend through the curb. The contraction joints in the curb shall be of the premolded type, 3/8" thick in lieu of the kind that is in the pavement, and shall be cut to conform to the contour of the curb before being placed. Extreme care shall be used in placing this material at the proper alignment with the contraction joint in the pavement.

Premolded expansion joint material shall meet the requirements of Sec. M-10.02 or Sec. M-10.03, and poured joint seal material shall meet the requirements of Sec. M-10.23 or Section M-10.26. Payment for expansion and contraction joints in pavement shall be included in contract unit price bid per square yard for Item T-71, Reinforced Concrete Pavement.

Bituminous Tack Coat
See note in proposal for material to be used for this item.

SEWERS

SEWAGE

The Contractor shall conduct his operations so as to maintain any authorized sanitary sewage flow uninterrupted throughout the construction period. Any unauthorized sanitary sewers shall be sealed as described below.

Any additional costs involved in maintaining this flow, by pumping or by any other approved method which is necessary for construction of the project, shall be included in the contract unit price bid per linear foot for Item 1-2, Storm Sewer.

LOCATION AND SIZE OF EXISTING PIPE

The location, type, depth and size of all existing pipe and house connections affected by this project are shown as nearly exact as available information will permit. The State of Ohio and City of Hamilton will not be responsible for any variations found during construction.

INLETS, MANHOLES AND PIPES

The proposed elevations and locations of inlets, manholes and pipes and the estimated lengths of pipe may be adjusted by the Engineer during construction.

COMPACTION FOR DRIVES
The subgrade for drives and mail box approaches shall be compacted to a depth of six inches to the density requirements shown in Table III, Item E-1. Payment for subgrade compaction, as specified above, shall be included in the unit price bid for Item E-1 Roadway Excavation.

CONTRACTION JOINTS
In addition to the pavement joints detailed for approaches and intersections the maximum distance between contraction joints shall in all cases be in accordance with standard drawing TJ.

SEWERS (CONT'D)

CONNECTIONS TO EXISTING SEWERS OR MANHOLES

The Contractor shall remodel bottoms of existing manholes where indicated on the Plans to facilitate a change in pipe size, slope, elevations, or sewer alignment. The new bottoms shall conform with details of Standard I-8 No. 1 Manhole, as closely as conditions will permit. *Payment for this work shall be included in the unit price bid for the pertinent pipe item involved.*

SEALING OF PIPE

All pipes entering or leaving existing manholes, catch basins, inlets or culverts, which are indicated to be abandoned, sealed, removed, filled or otherwise made inoperative shall be sealed at both ends if practicable, unless otherwise indicated on the Plans. Payment for this work to be included in the pertinent item involved.

Wherever any existing pipes, regardless of their nature, which are inactive or are to be abandoned are encountered in construction operations, they shall be sealed on both sides where broken into. In any case if the inlet or outlet ends of such pipes are presently exposed, they shall be sealed prior to backfill or construction of embankment. Payment for this work shall be included in the contract unit price bid for *Item E-1, Roadway Excavation.*

Sealing of pipes shall be accomplished by the proper installation of a suitable precast concrete plug, or the construction of a bulkhead of brick or concrete masonry with a minimum thickness of 12".

UNRECORDED CONNECTIONS

Any unrecorded active connections to the sewer through existing catch basins or manholes to be removed or abandoned encountered in construction shall be reconnected to the sewer as the Engineer may direct. Payment for this work shall be included in the contract unit price bid per linear foot for Item 1-2, Storm Sewer.

CONCRETE COLLARS

Concrete collars as required by the Plans or requested by the Engineer shall be constructed of Class "C" Concrete and shall be not less than 6" in least dimension from any exterior surface involved. Payment shall be included in the contract unit price bid for the pertinent *pipe item involved.*

DISPOSAL OF CASTINGS

Castings of manholes, inlets, or catch basins which are to be relocated, abandoned or removed shall be removed in accordance with the Provisions of Item I-16. Castings of manholes which are to be adjusted to grade shall be removed, stored and reset by the Contractor.

The Plans estimate quantities of new inlet castings which are to be used on existing or relocated inlets.

All existing castings which are removed shall be stored on the right-of-way at the disposal of the City of Hamilton or the State of Ohio.

ITEM SPECIAL - MASONRY, AS PER PLAN.
Where existing box culverts are indicated to be abandoned they shall be sealed by construction of a bulkhead of brick or concrete block masonry with a minimum thickness of 12".
Materials shall meet the requirements of Sec. I-8.02 and shall be laid in accordance with Sec. I-8.05.
The yardage paid for shall be the actual cubical content of the masonry in place, completed and accepted.
The yardage measured as provided above shall be paid for at the contract unit price per cubic yard bid for "Item Special Masonry, as per plan", which price and payment shall constitute full compensation for furnishing and preparing all material, placing and finishing and for all labor, equipment tools, and incidentals necessary to complete this item.

FED. RD. DIVISION	STATE	PROJECT	
2	OHIO

BUT-4-(8.48-15.02)

GENERAL NOTES (CONT'D)

SEWERS (CONT'D)

SEWER HOUSE DRAINS

Existing House Drains. All existing house drains, which includes yard, roof, basement or other similar pipe drains, now in use which are disturbed because of the Highway improvement shall be replaced by the Contractor. Where an existing house is to be removed, the upgrade end of the existing house connection shall be plugged and accurately referenced if the existing house connection remains satisfactory for future use. *Payment for plugging is included in the unit price bid for Item E-1, Roadway Excavation. Estimated quantities of I-3 pipe to be used for reconnecting disturbed drains are included in summaries.*

Proposed House Connections. The State of Ohio will notify property owners in advance of construction that if they contemplate new house connections to the proposed sewer, the property owner must furnish, at his sole cost, tees of the proper size and material to the Contractor. The Contractor will then install the tees as he proceeds with laying the sewer and payment for the work involved will be at the same rate as though he were furnishing and laying straight pipe.

To obtain a house connection to either an existing sewer that is to remain or to a proposed sewer, the property owner or his agent, at his sole cost, shall furnish all material and labor required to install the house connection from the carrier sewer to a point beyond the limits of roadway construction.

COOPERATION BETWEEN CONTRACTOR AND PROPERTY OWNER

The Contractor must cooperate with the property owner or his agent to give said property owner or his agent ample opportunity for extending said sewer connection from the tee branch or existing sewer to a point beyond roadway construction limits. The necessary house connections shall be installed by the property owner or his agent at no cost to the Contractor, other than the cost of cooperatinn in scheduling his work which said cost shall be assumed by the Contractor and shall be included in the unit prices bid for the various sewer items.

REMOVAL OF EXISTING HOUSE DRAINS

The removal of all existing house connections, which includes sanitary, yard, roof, basement or other similar pipe drains within the roadway excavation limits shall be classified and paid for as item E-1, Roadway Excavation.

54" CLASS "A" STORM SEWERS
If the contractor elects to use Sec. M-6.4(c) pipe for the 54" Class "A" Storm Sewer from station 114+77 to Shaffer Creek the gage shall be No 10 or heavier.

MISCELLANEOUS

DUMPED ROCK FILL FOR CHANNEL PROTECTION

The masonry material used for the Dumped Rock Fill shall be obtained from the Removal of Existing Structures, Item S-24 or Item S-22 or from Item E-8, Removal of Existing Pavement. Larger size material than that which is specified in the Construction and Material Specifications may be used providing a reasonable smooth and continuous surface conforming to the lines shown on the Plans is obtained. All dumped rock used at the outlet of culverts shall be uniformly placed so that at least fifty percent (50%) of the pieces will weigh at least 75 pounds.

Dumped Rock Fill shall be placed as shown on Shaffer & Gregory Creek Channel Relocation drawings.

The excavation required to place Dumped Rock Fill along the proposed channels shall be paid for as Channel Excavation, Item E-3. Payment for all other work involved in obtaining and placing the Dumped Rock Fill shall be included in the price bid for Dumped Rock Fill as per Plan, Item 1-10.

FILL FOR GREGORY CREEK CHANNEL RELOCATION

All fill material placed in connection with the realignment of the existing Gregory Creek Channel shall meet the specification requirements for embankment as set forth under Item E-1, Roadway Excavation.

MATERIALS STOCK PILED FOR CITY

The City will claim and haul from the project, steel fence, street signs, castings, and railing which are to be removed from their locations and stock piled by the Contractor for that portion of the work within the City limits.

REMOVAL, RESETTING & REPAINTING OF FAIRGROUNDS FENCE

The fairgrounds fence shall be removed, reset and repainted by the Contractor as shown on the plans and as approved by the Engineer. *Payment for removing, resetting, and repainting shall be at the contract unit price bid per lineal foot for Item Special, Fence, Removed, Reset and Repainted.* (Cont'd below)

RIGHT-OF-WAY MONUMENTS, FEDERAL PROJECT MARKERS & SECTION MARKERS

Existing Right-of-Way Monuments, Bench Marks, Federal Project and Section Markers that will be removed by construction, shall be protected by the Contractor as per Section G-7.09 of the Construction and Material Specifications until they can be witnessed, referenced and reset by the Construction Field Crews.

REVISIONS TO MEDIAN DESIGN

Areas marked (1) and (2) are correct for general location only. Approximate quantities have been added to the summaries for estimating purposes. Correct design and quantities for the proposed construction in these areas will be provided by a change order at the time of construction.

REMOVING, RESETTING AND REPAINTING FAIRGROUNDS FENCE (Cont'd.)
The existing chain link fairgrounds fence shall be removed, re-erected in its new location and repainted by the Contractor prior to June 1 1956.

UTILITIES

GAS AND WATER LINES

All work required for removing, relocating, or constructing new gas and water lines and appurtenances as shown on the plans will be done by the Contractor unless otherwise noted.

UTILITY POLES

All work required for removing or relocating utility poles as required by the construction of the roadway and appurtenant facilities will be done by others. The Contractor must cooperate and coordinate his work with the other contractors to allow their work to proceed with a minimum of delay and cost.

RELOCATION OF RADIO ANTENNA GROUND WIRE SYSTEM

All work required for removing and relocating the radio antenna ground wire system at approximately Station 116+42 will be done by others. The Contractor must cooperate and coordinate with the contractor for the radio station work to allow him to proceed with a minimum of delay and cost.

Bituminous Coating

The bituminous coating material shall conform to the requirements of Sec 707-2.4(C) for bituminous coated corrugated metal pipe. The bituminous material shall be heated in a tank to approximately 400° Fahrenheit and shall be applied to both surfaces of the metal with a mop or brush to a thickness of approximately 1/16 of an inch. The bottom plates shall be coated on the outside before installation. The remainder of the structure shall be coated after the plates are assembled and all the bolts are tight.

ESTIMATED QUANTITIES (Superstructure)

ITEM	TOTAL	UNITS	DESCRIPTION
S-1	91.8	Cu. yds.	Class "C" conc. - Superstructure.
S-4	24,298	Pounds	Reinforcing Steel.
S-7	12,541	Pounds	Structural Steel.
S-8	12,541	Pounds	Field painting of structural steel.
S-22		Lump Sum	Removal of portions of existing structure.
T-35	3.3	Cu. yds.	Asphaltic concrete Surface course, Type "C" (60-70)

Existing Structure
SPAN: 112'-4" clear; 115'-0" c/c brgs
LENGTH c/c FLOOR: 117'-2"
WIDTH BETWEEN CURBS: 29'-0"
FLOOR: 6" reinf. conc. slab
CURBS: 6"x12"
WEARING SURFACE: Brick with sand cushion +4" Bituminous material.

GRAVEL, if used as the coarse aggregate, shall be according to Sec. M-3.93 instead of M-3.91 for Class "C" concrete, superstructure. Gravel meeting the requirements of Sec. M-3.93 also may be used for other concrete in this structure.

NOTES: New slab designed for CF=400 & 30"/ft. future wearing surface.
Existing floor beams, stringers & trusses have a capacity for S-15 loading.
No work shall be done on the modifications to the existing Gregory Creek Bridge until the new southbound lane has been completed & is open to traffic. During alterations of this bridge, traffic will be rerouted over the new southbound lane.
Disposition of removed materials in accordance with Item S-24.
Use class "A" welding through out.
Work to be done — Exist. slab & end finish (except 5"x3"x⅜" L on backwall) & asphaltic pavement at abutments to line indicated to be removed. New conc. slab, bolsters, end finish, metal curbs, & asphaltic pavement to be added as shown on this sheet.

(Bearing Piles not shown)

SECTION A-A

Scale: 1"=10'-0"

PROPOSED STRUCTURE

TYPE: Continuous rolled beam with reinforced concrete deck and substructure.
SPANS: 45'-9" - 61'-0" - 45'-9" c. to c. bearings
SKEW: 37° L.F.
WEARING SURFACE: 1" monolithic concrete.
SAFETY CURBS: 2 @ 2'-0"; 9" high.
ROADWAY: 30'-0" between curbs.
APPROACH SLABS: 20'-0" long.
LOADING: Standard lane loading as per State of Ohio Design Specifications for Highway Structures, October 1, 1951 with revisions, (July 15, 1952, and April 1, 1954). C.F. = 400.

NOTES

- Symbol denotes drill hole.

See sheet no. 245 for test boring data.

See sheet number 53 for trees.

Foundation design and foundation quantities are based on a study of test borings and soil samplings made at the site. This sounding information may be inspected in the office of the Bureau of Bridges, in Columbus or in an abridged form in the Division office, but the State assumes no responsibility for the accuracy thereof.

NOTE: Materials in approach slabs are not included in the above estimated quantities.

NOTE:
Materials in approach slabs are not included in the estimated quantities.

GENERAL NOTES

DECK PLACING PROCEDURE: Deck slab shall be placed in sections, between transverse construction joints, in the numerical order and in the direction indicated on the drawings.

WELDING: Welding shall be Class "A" unless otherwise shown on plans. Any weld shown as field weld may be in the shop at the option of the contractor. Class "B" welds are shown with the letter "B" in the V-tail of the weld symbol. -

BEARING PILES: Piles shall be driven to firm contact with rock. This shall be considered as attained when the capacity according to the formula in Sec. 3-18.05 is at least 45 tons per pile for the pier piles and 35 tons per pile for the abutment piles if a 7,000 ft. lb. steam hammer is used, or 35 tons for the pier piles and 25 tons for the abutment piles if a steam hammer or drop hammer of 15,000 ft. lb. or greater energy is used and if the length of penetration is approximately equal to the depth to rock according to the bridge foundation investigation report. If the energy rating of the hammer is between these values, the required formula capacity shall be determined by interpolation.

EXCAVATION: Roadway embankment at abutments shall be placed and compacted to the elevation of the earth benches shown. Excavation shall then be made for abutment footings, after which the piling shall be driven. Quantities for excavation includes removal of fill material between top of earth benches and bottom of abutment footings.

SURFACE FINISH OF CONCRETE: Curb faces and fascias of deck shall receive a rubbed surface finish. All other exposed surfaces shall be governed by the provisions of Item S-1.

GRAVEL: If used as a coarse aggregate, shall be according to Sec. M-3.93 instead of M-3.91 for Class "C" concrete in the superstructure. Gravel meeting the requirements of Sec. M-3.93 may also be used for other concrete in this structure.

ADDITIONAL NOTES: For additional notes see sheet 243.

STEEL FRAMING PLAN

Scale: 1/8" = 1'-0"

BEAM SPLICE WELDING PROCEDURE

1. At first pier, weld bottom flange splice plate to beam on middle span side of joint only.
2. Raise end of beam at first abut. 1/8".
3. Weld beam flanges and web at first pier.
4. Weld top flange splice plate at first pier, (both sides of joint).
5. Complete welding of bottom flange splice plate at first pier.
6. Repeat steps 1 to 5 inclusive at second pier by raising at second abutment.
7. Lower ends of beams at both abutments.

DEFLECTION & CAMBER

LOCATION	B-1 End Span	B-1 Middle Span	B-2 End Span	B-2 Middle Span
Deflection due to weight of steel	1/16"	1/16"	1/16"	1/16"
Deflection due to remaining dead load	1/4"	3/8"	3/16"	1/4"
Sum of deflection and camber	5/16"	7/16"	1/4"	5/16"
Required shop camber	0	0	0	0

No cambering of the beams is required but the beams shall be so fabricated that any curved beams will be placed with the convex flange up.

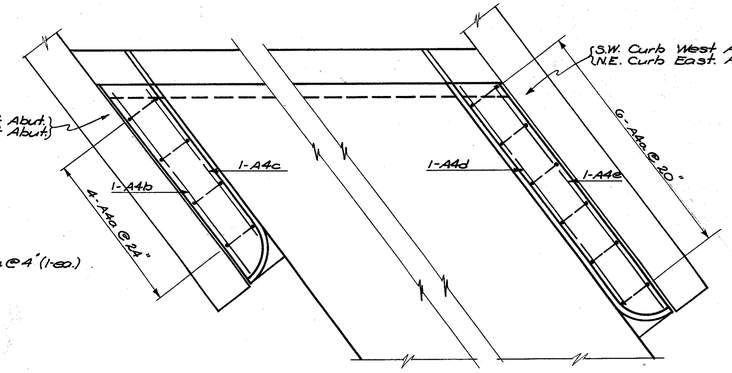
PLAN- EAST APPROACH SLAB

Scale: 1/4" = 1'-0"



SAFETY CURB REINFORCING STEEL

Scale: 3/8" = 1'-0"

NOTES:

Approach slabs to be Class "C" concrete
The price bid for Item 7-7 for the approach slabs shall include safety curb and 1" premoulded expansion joint filler.
For location of expansion joints in the approach pavement adjacent to the bridge see standard drawing TJ-1. For details not shown reference is made to Standard Drawing BS-1-54.

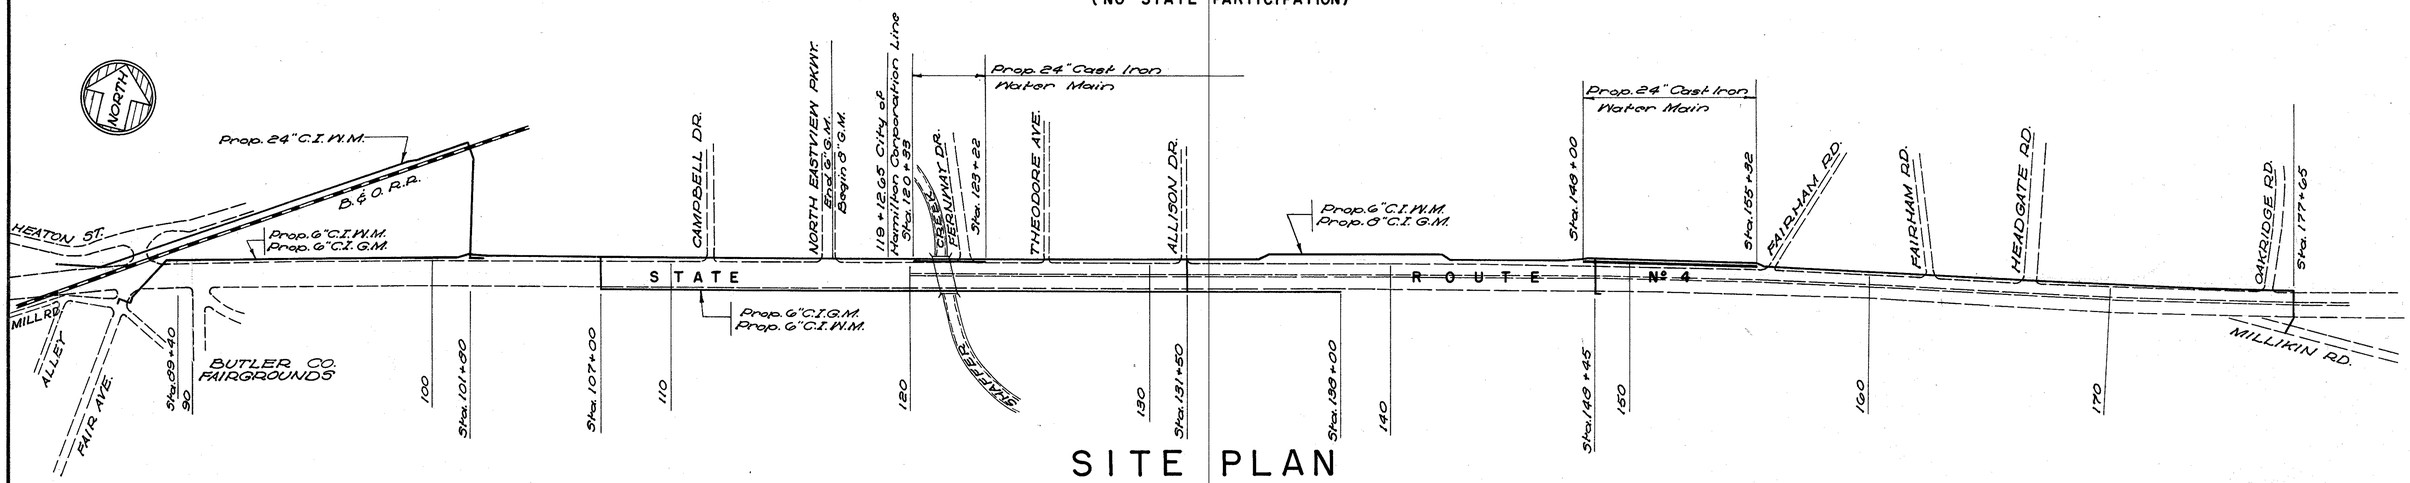
CITY OF HAMILTON

WATER & GAS MAINS

MILL RD. & FAIR AVE. TO MILLIKIN RD.

(NO STATE PARTICIPATION)



SITE PLAN

SPECIFICATION

General

The work of installing the water mains and gas mains shall be accomplished in accordance with all the applicable provisions of the State of Ohio Department of Highways - Construction and Material Specifications - and these specifications together with the drawings. In general these specifications cover materials and items of work which are peculiar to the work of installing water and gas mains. Items of work which are described in detail in the Ohio Department of Highway Specifications shall be adhered to unless otherwise specified.

Rules and Regulations

The contractor shall comply with all City of Hamilton rules and regulations governing construction work within the corporation limits. The contractor shall comply with all rules and regulations of the Baltimore & Ohio Railroad Co. for work which is to be accomplished on the railroad right of way. Connections to existing gas mains will be made by the City of Hamilton Gas Department but all work of exposing existing mains shall be done as part of this contract.

Work To Be Done

The installation of the water and gas mains shall include all material, labor, equipment, services, and accessories necessary to complete the work as shown on the drawings and here specified. The major items of work include (1) install sections of 24" water supply main (2) install 6" water distribution main (3) connect existing water service branches to 6" water distribution main (4) connect existing fire hydrants to new 6" water distribution main (5) install 6" and 8" gas distribution mains (6) connect existing gas service branches to new 6" and 8" distribution mains.

Materials

Mechanical joint cast iron pipe 4", 6", 8", and 24" diameter shall be centrifugally cast, Class 150, in accordance with Federal Specification WW-P-421 Type I or II. Joints shall conform to A.S.A. Specification A21.11.

Flanged joint cast iron pipe 24" diameter shall be pit cast class 250, in accordance with A.S.A., A21.2 with American 250 # flanges, plain faced.

Fittings for both mechanical joint and flanged joint pipe shall be suitable for the type and class of pipe with which it is being used.

Bolts for flanged joints shall be stainless steel.

Pipe and fitting used with water shall be tar coated inside and outside.

Pipe and fittings used with gas shall be tar coated on the outside only.

Steel casing pipe shall be butt or spiral welded in accordance with A.S.T.M. 139.

Joints for steel pipe shall be field welded.

Steel pipe 16" diameter shall have metal thickness of not less than 1/4" and 36" diameter pipe shall have metal thickness of 9/16".

Valves all sizes shall be in accordance with AWWA Standard Specification C 500-52 T for gate valves for Ordinary Water Work Service. Valves shall be for 150 p.s.i. working pressure, cast iron body, bronze mounted, parallel seat, double disc non-rising stem, nut operated. All valves to have a thread arrangement to open valve when turned clockwise. Valve shall have mechanical joint ends. The 16" valves shall be provided with bevel gears to allow horizontal installation and a nut operated by-pass valve.

Corporation cocks for water service connections shall be 3/4" size with 90° elbow and fitted for flared copper connections. Corporation cock shall be Mueller or equal.

Curb stops shall be 3/4" size for water and 1 1/4" for gas and fitted for flared copper connections for water and threaded pipe for gas. Curb stops shall be Mueller or equal.

Curb boxes shall be 2 1/2" diameter and adjustable height between 30" and 42". Cover shall have in raised letters the word "WATER" or "GAS" for the required water or gas service. Curb box shall be Clow - National F-4600 No. 92D or equal.

Valve boxes shall be 5 1/4" diameter and adjustable height between 30" and 42". Base shall be suitable for the size of valve. Cover shall be of "Stay Put" type with the word "WATER" in raised letters. The valve boxes shall be Clow - National F2450 with F2494 cover.

Laying Of Pipe.

(1) Care shall be taken not to damage the tar coatings. Pipe shall be laid upon an undisturbed foundation giving uniform bearing with the holes dug for the joints. All trench excavation below subgrade shall be refilled to subgrade with concrete. If trench bottom is soft and unsuitable to carry the pipe a concrete bed shall be provided. Ends of pipes in trenches shall be closed when pipe is not being layed. (2) Joints for mechanical joint pipe and flanged pipe shall be made up in accordance with the recommendation of the manufacturer. (3) Backfilling shall be done in accordance with AWWA Standard Specification for laying cast iron pipe except that 6" layer of earth may be used and earth shall be free from rocks. (4) Care of Other Services. All underground sewers, water, gas, electric, or telephone services which are encountered shall be carred for and maintained as part of this work. If any such services are injured or disturbed this contractor shall arrange for their restoration by the respective owner company at no additional cost to the contract. All known underground services and structures are shown for the convenience of the contractor. No assurance can be given as to the completness or correctness of such underground features. (5) Fire hydrants and curb stops shall be blocked and suitably supported. (6) The installation of all water mains shall be carried into service with the minimum of interruption to the normal service. All water mains shall be installed, tested, chlorinated and filled with potable water before service taps are made. The contractor shall work with the City of Hamilton Director of Utilities in placing the mains and service connections into normal service.

Testing

The water mains shall be tested under a pressure of 150 p.s.i., in accordance with the AWWA Standard Specification for laying cast iron pipe modified for mechanical joint pipe. The testing of gas mains shall be made at 50 p.s.i., with air pressure. The pipe lines shall satisfactorily pass the pressure tests before service connections are made.

Chlorination

After satisfactory installation and testing of the water mains they shall be chlorinated in accordance with the AWWA Specification.

Backfilled trenches shall have the surface restored as soon as possible. The restoration of the surface shall be such as to match the surrounding surfaces.

Clean up of work area shall consist of the removal of surplus material in order to leave the entire site free and clear and in good condition.

Approved_____

Date:_____ Director of Utilities - City of Hamilton.
