PID: 21788  
CUY-77-11.11 Replace

This is an ODOT decision document. A copy has been uploaded to Environet.

Tom,

Based on our April 7, 2023 conversation where we review of the proposed work, the project area's topography and the proposed soil boring locations. We discussed how the bridge being replaced carries active rail lines over I-77 instead of I-77 being carried over the rail line. In addition, the area where the proposed boring were located is very hilly and is not accessible from the current I-77 or from the active rail line above. Because of this, it was agreed that the RMR Investigation would be replaced with a solid waste plan note.

If you have any questions or need additional information, please let me know.

Julie
