JEFFERSON TOWNSHIP, GREENE COUNTY.
JASPER TOWNSHIP, FAYETTE COUNTY.

LIMITED ACCESS–This improvement is especially designed for through traffic and has been declared a limited access highway or freeway by action of the Director of Highways in accordance with the provisions of Section 5511.02 of the Revised Code of Ohio.

The Standard Specifications of the State of Ohio, Department of Highways, including changes and supplemental specifications listed in the proposal, shall govern this improvement.

The Right of Way for this improvement will be provided by the State of Ohio.

I hereby approve these plans and declare that the making of this improvement will not require the closing of the highway to traffic and that provisions for the maintenance and safety of traffic will be as set forth on the plans and estimates.

CHANGE ORDER NO. 1

WORK REQUIRED

Grade changes in the ditch on right side, will require additional excavation between Sta. 69+00 and Sta. 92+36. The additon of a drainage ditch at Sta. 69+93 Rt will require additional dump rock, sod and excavation. Powers Road drainage outlet at Sta. 84+00 will require change of grade between Sta. 22+00 Powers Road and mainline ditch. Sod will be required for ditch protection on the new grade and the relocation of the proposed guard rail at Powers Road will also be required, but no additional quantities of guard rail are needed.

ESTIMATED QUANTITIES

GENERAL NOTES

DESIGN SPEED

The geometrics for this project have been planned for a design speed of 70 miles per hour.

FIELD OFFICE

The Contractor shall, in accordance with Sec. S-0.01 (b), provide for the exclusive use of the State's employees, a suitable field office having a mimimum of 500 sq. ft. of floor space. The Contractor shall have a telephone installed and maintained in this field office during the construction of this project. The Contractor shall also provide and install wiring and outlets suitable for connecting electric lights and office equipment in the field office and provide 110 volt alternating current to the office during the entire period of construction of this project.

UTILITY ADJUSTMENT

Any or all work required for public or private utilities will be done by and at the expense of their respective owners, unless otherwise noted on these plans. The Contractor shall notify, at least five days before breaking ground, all public service corporations having wires, poles, conduits, manholes, or other structures that may be affected by his operations, including all structures which are affected and not shown on these plans. The Contractor shall cooperate with the public service corporations or their agencies in carrying on their respective operations during the construction of this project.

PERMITS, LAWS AND REGULATIONS

The Contractor shall secure at his own expense all necessary permits from the municipal or other public authorities, shall give all notices required by law or municipal ordinances, and shall pay all fees and charges incident to the due and lawful prosecution of the work covered by this contract.

UTILITY OWNERSHIP

The Ohio Bell Telephone Company, Dayton, Ohio (Mr. H. F. Gear, 3233 Woodman Dr., Room 224)

The Dayton Power and Light Co., Dayton, Ohio

The County Engineer, Greene County, Xenia, Ohio (Mr. Frederick R. Lemcke)

The County Engineer, Fayette County, Washington Court House, Ohio (Mr. Charlie P. Wagner)

ELEVATION DATUM

All elevations are based on USGS datum.

REPLACEMENT

The Contractor shall replace at his own expense any item not specifically listed for removal that is damaged or destroyed by his operation.

CONSTRUCTION LAYOUT STAKES

See note in proposal describing the work included in this lump sum pay item.

ESTIMATED QUANTITIES

Specific locations and usage of estimated quantities set up on this plan to be used "as directed by the Engineer" shall be made a matter of record by incorporation into the final change order governing completion of this project.

FERTILIZER, SEEDING AND SODDING

Commercial fertilizer (12-12-12 Mix) applied at the rate of twenty (20) pounds per 1,000 square feet is to be used on all seeded and sodded areas. Sod is to be used around catch basins, structures, and ditches where necessary to prevent erosion as indicated in the plans and as directed by the Engineer.

SUBGRADE COMPACTION

The subgrade under the paved shoulders shall be compacted to a depth of 12" and is included in the quantities shown for Item E-1, "Compacted Subgrade".

SCARIFICATION OF EXISTING FLEXIBLE PAVEMENT

Within the limits of construction where the existing flexible pavement will have less than 6 inches of fill placed upon it, the pavement shall be thoroughly scarified for its full depth, mixed with sufficient soil and properly recompacted to insure the elimination of any planes of separation between it and the embankment placed thereon. Payment for scarification as described above shall be included in the unit price bid for Item E-1, Roadway Excavation.

MAILBOX TURNOUTS

The following quantities are included in the plans for construction of mailbox turnouts on Orchard Grove and Smith Roads. Where feasible mailbox turnouts will be combined with drives and the quantities adjusted by the Engineer.

Item T-35 Asphaltic Concrete Surface Course, Type B or C (85-100) 6 C.Y.

Item B-19 Aggregate Base Course 13 C.Y.

For details see Standard Drawing DR-1. Quantities to Sheet 10

REMOVAL OF TREES AND STUMPS

All trees and stumps lying within the construction limits of this project shall be removed under the lump sum price bid for Item E-9, Removal of Trees and Stumps.

The following is an approximate estimate of the number of trees and stumps to be removed:

Sizes	No. of Trees and Stumps
12" - 18"	48
18" - 24"	33
24" - 30"	32
30" - 36"	18
36" - 42"	11
42" - 48"	7
Over 48"	3

The above estimate is approximate and the State of Ohio reserves the right to order the removal of additional trees and stumps outside of the limits of construction but within the right-of-way and/or easement lines. Payment for the removal of these additional trees or stumps shall be included in the lump sum price bid for Item E-9, Removal of Trees and Stumps.

ROUNDED CORNERS ON CROSS SECTIONS

The rounded corners shown on Standard Drawing R1-1, as modified by the typical sections, apply to all cross sections, even though otherwise shown on these plans.

GENERAL NOTES

COMPACTION USING HEAVY PNEUMATIC TIRED ROLLER

An estimated quantity for this item has been included in the General Summary, for use as directed by the Engineer, in proof rolling of all subgrade, except for areas where rock or shale is encountered. The pneumatic tired roller shall be operated at 50 ton gross load for the final proof rolling. Quantities to Sheet *10*.

Item S.S. CE-101.04 Compaction Using Heavy Pneumatic Tired Roller 120 Hours

DUST CONTROL

A quantity of calcium chloride and water is provided for use for dust control as directed by the Engineer. Quantities to Sheet *10*.

Item M-10 Calcium Chloride for Dust Control 25 ton

Item E-11 Water for Dust Control 200 M Gal.

MAINTENANCE OF TRAFFIC ITEMS

The following estimated quantities have been included in the General Summary for use in maintaining ingress and egress, and local traffic as directed by the Engineer. Quantities to Sheet *10*.

Item M-10 Calcium Chloride for Maintaining Traffic 10 ton

Item T-10 Traffic Compacted Surface Course 500 c.y.

Item T-35 Asphaltic Concrete Surface Course or Bit. Pre-mixed Surface for Maintaining Traffic 25 c.y.

FEDERAL AID CONSTRUCTION IDENTIFICATION SIGNS

The Contractor shall furnish, erect, maintain, and subsequently remove Federal Aid Construction Identification Signs at each of the following locations::

1,000 feet right and left of SR 1 centerline on Orchard Grove Road

400 feet right and left of SR 1 centerline on Marchant-Luttrell Road

Sign details shall be as specified on Standard Drawing FAC1-1 Code N-43(2)144 and the signs shall be erected in accordance with Standard Drawing FAC1-2. Additional requirements shall be in accordance with notes in the Proposal.

ITEM T-30 TACK COAT

Although this item has been estimated for use on the entire existing bituminous pavement area to be resurfaced, it shall be used only on dry or checked pavement areas where specifically directed by the Engineer.

Pay quantities for this item shall be determined by final measurement.

PAVEMENT REMOVAL AND DISPOSAL

Removal and disposal of existing non-rigid pavement unless otherwise indicated on the plans shall be measured and paid for as Item E-1, Roadway Excavation.

COOPERATION NOTE

The Contractor shall note that there is to be work performed by others on and adjacent to this project which is not a part of this plan. The Contractor shall give them and their representative his fullest cooperation in connection with this construction.

SEEDING AND PROTECTING

Quantities for seeding are calculated for the soil areas between the right-of-way fence lines as shown on the Right of Way plans, between the right-of-way lines in unfenced areas, and within the work limits for areas outside the fence line or right-of-way line covered by temporary, drainage or channel easements.

ITEM I-22 SUB-BASE, GRADING "A" OR "B", AS PER PLAN

The material furnished for this item shall meet the requirements of Grading "A" or "B" of Sec. I-22.02 except that, for either grading, no more that 10 percent of the material shall pass a No. 200 sieve after all operations of placement and compaction have been completed.

DRIVEWAYS AND MAILBOX TURNOUTS

Residence drive aprons and mailbox turnouts shall be paved with two 1" courses of T-35 type "C" asphaltic concrete on 5" of B-19. Residence driveway pavement beyond the apron shall consist of 8" of B-19. Field drives shall be paved with 6" of B-19. All driveways shall be Type 2 as shown on Standard Construction Drawing DR-1.

ITEM L-3 PLACING STOCKPILED TOPSOIL, AS PER PLAN

On this project, the method of measurement for this item shall be in cubic yards compacted in place in lieu of square yards as specified in Sec. L-3.10. Furnishing and placing of commercial fertilizer in conjunction with this item shall be in accordance with Item L-9 and payment therefor shall be at the unit price bid for Item L-9, Commercial Fertilizer. Except as noted above, all other requirements of this item shall be in accordance with Item L-3.

ITEM L-1, TOPSOIL STOCKPILED

The material to be stockpiled for placement under L-3 on this project shall be obtained under Item L-1 from areas within the limits of the proposed right-of-way as tabulated on sheet *13*. No borrow item is anticipated for this purpose .

Provision of this separate L-1 item shall, in no way, be construed as a waiver of the provisions of Sec. E-1.03 (a) and sod and incidental topsoil removed elsewhere on this project shall be salvaged and used as described in Item E-1 with payment therefor included in the unit price bid for Roadway Excavation.

UNDERGROUND UTILITIES

The location of the underground utilities shown on the plans have been obtained by diligent field checks and searches of available records. It is believed that they are essentially correct, but the State of Ohio makes no guarantees as to their accuracy or completeness.

REMOVAL OF EXISTING PIPE

The removal of all existing pipe drains within the limits of proposed excavation items shall be included for payment in the unit prices bid for the respective excavation items, unless otherwise itemized in the plans.

PLUGGING PIPE

The upstream ends of all pipe or tile lines intercepted by earthwork operations and, where indicated, the ends of pipe lines to be abandoned in place, shall be effectively blocked and covered. Broken pieces and portions of pipe or tile shall be removed until a whole length is encountered which shall be blocked with concrete, flat stone or brick laid in mortar, or a precast clay or concrete stopper. Payment for the above work shall be included in the unit price bid for Item E-1, Roadway Excavation.

GENERAL NOTES

CONNECTIONS TO EXISTING PIPE

At places where the plans provide for proposed drainage pipe to be connected to existing pipes, it shall be the responsibility of the Contractor to locate the existing pipe both as to line and grade before he starts to lay the proposed pipe. The cost of this operation shall be included in the unit price bid for the pertinent pipe item.

FIELD DRAINS

All farm tiles which are encountered during construction shall be provided with unobstructed outlets under the direction of the Engineer. Existing collectors which are located below the roadway ditch elevations and which cross the roadway shall be replaced within the right-of-way limits by Item I-1, Class A-1 Pipe.

Existing collectors and isolated farm tiles which are encountered above the elevation of the roadway ditches shall be outletted into the roadway ditch. The optimum outlet elevation shall be, if possible, one foot above the flowline elevation of the ditch. Lateral tile fields which cross the roadway shall be intercepted by Item I-1, Class H-2 Pipe and carried in a longitudinal direction to an adequate outlet or roadway crossing.

The location, type, size and grade of required replacements shall be determined by the Engineer during construction and payment shall be made on final measurements.

The following estimated quantities have been included in the General Summary sheet for the work noted above:

I-1	6" Pipe, Class A-1, Sec. M-6.6 (b) or M-6.8 (b)	500 l.f.
I-1	8" Pipe, Class A-1, Sec. M-6.6 (b) or M-6.8 (b)	500 l.f.

I-10	Dumped Rock Channel Protection	50 c.y.

PRIVATE SEWER TAPS

This plan makes no provision for connecting, nor shall the Engineer or Contractor connect, any existing or new private drainage to the new highway drainage system when such private drains carry effluent or drainage from leaching bed outlets, cellar drains, or sink drains, or polluted water of any kind. Connections may be made to the existing or new highway drainage system when the water carried to the project drainage system does not come within the category outlined above. Acceptable water includes flow from roof drains, field drains, and enclosed natural drainage sources which would reach the road through natural channels if such water was not conducted artificially. Existing sewer taps which do not carry acceptable water as defined above shall be plugged at the right-of-way line with class "E" concrete and payment included in the unit price bid for "Item E-1, Roadway Excavation."

ITEM I-9 STONE UNDERDRAINS

Stone underdrains shall be placed at fifty (50) foot intervals (25 ft. alternate spacing) on each side of centerline, on the cross-road reconstruction.

In the final finishing of slopes and ditches, care shall be exercised to assure that the ends of I-9 underdrains will be left free of earth cover which would impede free drainage. The actual area of the outcrop of the I-9 Underdrains shall not be seeded.

SPECIAL DITCHES

For special ditch grades, see cross sections.

REINFORCED PIPE ENDS

Reinforced ends will be required for the exposed ends of all corrugated metal Class F-1 Pipe (Helical Pipe is not permitted) used for all Driveways and Underdrain Outlets if the exposed pipe ends are unprotected by Headwalls, Catch Basins or Manholes.

CATCH BASINS

It shall be the Contractor's responsibility to construct the catch basins so that they are oriented correctly and conform in elevation with the ditches they are intended to serve.

Stationing and distance right or left is to the center of the catch basin.

All 2-2-B catch basins shown of these plans shall be modified using a 3/8" solid steel plate in place of the grate.

EROSION CONTROL

Items I-10 and L-10 are provided in these plans for erosion control. Rock of a stable nature will not be removed in order to place any of these items. The Engineer shall check and non-perform quantities or adjust locations and quantities for these items where indicated by field conditions during construction.

MAINTENANCE OF SEWER FLOW

The Contractor shall conduct his operations so as to maintain at all times sewer flows through existing facilities to remain in place and through existing facilities to be replaced until new facilities are completed and placed in use.

Payment for any additional costs involved in maintaining these flows by pumping or by any other means approved by the Engineer shall be included in the unit price for the respective pipe items.

ITEM SPECIAL, DRILLED WELL ABANDONED

The existing concrete or stone slab well cover shall be removed and disposed of. The pump and all other salvageable parts shall be carefully removed and stored on the abutting property. The casing shall be cut off at least two feet below the proposed finished grade outside proposed pavement areas or at least two feet below the proposed subgrade elevation inside proposed pavement areas and capped with Class "E" Concrete or a standard threaded pipe cap.

The unit price bid for each "Drilled Well Abandoned" shall include payment for all labor, tools, materials and incidentals necessary to complete this item.

GENERAL NOTES

CENTERLINE REFERENCE MONUMENTS, AS PER PLAN

Where monuments are located outside the pavement area, they shall be constructed of Class "C" concrete, cast-in-place in a circular hole eight (8) inches in diameter and forty-four (44) inches in depth. Top of concrete shall be finished at a depth of two (2) inches below ground level and the upper six (6) inch portion of the concrete shall be formed. A reference pin will be furnished to the Contractor to be embedded in the wet concrete as directed by the Engineer to mark the centerline and station.

Where the monuments are located within the pavement areas, they should be standard monument assemblies as per Standard Drawing RI-1.

SEEDING FORMULA

The following seed mixture shall, in lieu of the mixture listed in Section L-9.11, be used throughout the limits of this project.

60% Kentucky 31 Fescue
20% Kentucky Bluegrass
15% Creeping Red Fescue
5% Red Top

GUARD RAIL FLARES

Where proposed guard rail flares are constructed of rail elements which have not been fabricated exactly to fit the curvature shown on the plans, the two end posts of each flared section shall be encased in a minimum 4 inch thickness of Class "E" concrete for the full depth of post below the ground line. Payment for encasement, if required, shall be included in the unit price bid for the guard rail.

SEQUENCE OF CONSTRUCTION OPERATIONS:

Deep underdrains shall be installed and backfilled to subgrade elevation, immediately prior to construction of the subbase, except that, where subsurface conditions are such that improvement of an unstable subgrade can be accomplished through the drying action of deep underdrains, the project Engineer may authorize or require the contractor to delay the construction of the subbase as necessary.

The subbase then shall be constructed under the concrete pavement area and extended out to cover the porous backfill for the deep underdrain.

Pavement shall then be constructed.

After the subbase in the shoulder area is in place and compacted as specified, and immediately prior to placing the porous base course, the material located above and within the underdrain trench shall be removed to the depth necessary to expose clean Class 3 backfill. The trench so excavated shall be backfilled with new Class 3 backfill material, or if the contractor so elects, he may substitute material meeting the requirements of Item B-112, Porous Base Course. If, after testing the subbase material for composition in the shoulder area, it is found that removal of contaminated material from the surface is necessary, such material shall be replaced with material meeting the requirements of Item B-112, Porous Base Course at the expense of the Contractor.

Porous base course shall then be constructed and construction of the waterproofed aggregate course shall follow immediately.

TRAFFIC NOTES

ORCHARD GROVE ROAD

Two way traffic shall be maintained at all times by using S-15 Temporary Run-around Road, using traffic compacted surface course, or the existing or proposed pavement.

POWERS ROAD

This road shall remain open to traffic across the proposed expressway until the Smith Road grade separation is completed and opened to traffic, then Powers Road may be closed. The cul-de-sacs shall be constructed after the reopening of Smith Road.

SMITH ROAD

Smith Road may be closed to traffic for a maximum period of 9 consecutive months, during the construction of the grade separation over SR 1. During this time traffic will be detoured across the freeway at Powers Road.

MARCHANT-LUTTRELL ROAD

Two way traffic shall be maintained on this road during construction of the grade separation carrying SR 1 over this cross road.

After the completion of the grade separation, the plans require the resurfacing of Marchant-Luttrell Road within certain limits. During this operation one-way traffic will be permitted for minimum periods of time consistent with the requirements of the specifications for protection of completed asphaltic concrete courses.

JENKS ROAD

Jenks Road may be closed to through traffic within the limits of construction when necessary for the construction of the grade separation and when directed by the Engineer. The road shall not be closed to traffic for a period exceeding 9 consecutive months.

PROTECTION OF TRAFFIC

The contractor shall safeguard the traveling public on Marchant-Luttrell Road by providing platforms, nets, or other suitable protection above the traveled lanes. Payment for this protection shall be included in the lump sum price bid for "Maintaining Traffic."

PAYMENT FOR TEMPORARY ROADWAYS

Payment for construction, maintenance, and subsequent removal, whereever required, of temporary roadways not separately itemized under the S-15 items, except for furnishing and placing of Items M-10, S-15, and "T-35 for Maintaining Traffic", shall be included in the lump sum price bid for "Maintaining Traffic".

GRADE FOR ITEM S-15 RUN-AROUND ROAD

Unless otherwise shown on the plan and profile sheets, the grade of Item S-15 Run-around Roads shall generally be the same as that of the existing pavement.

EROSION CONTROL AT BRIDGES

Sod gutters shall be provided at ends of bridges as per detail on sheet No 63 where called for on the plans.

EROSION CONTROL AT END WALLS AND CATCH BASINS

A strip of sod 18" wide shall be placed along the back and both ends of each endwall and each standard No 8 catch basin to prevent erosion. Sodding thus used shall be included for payment in the unit price bid for "Item L-10, Sodding."

FLARED APPROACH SLABS

Place additional A-bars in flared areas by maintaining the standard spacing along the wide end of the slab and fanning the bars in toward the bridge as directed by the Engineer.

GENERAL NOTES

LIST OF RUN-AROUND ROADS

Item S-15 Run-around Road - Orchard Grove Road - Station 7+50 to Station 30+50.

LIGHTS, SIGNS AND BARRICADES

The contractor shall, in addition to the general requirements of Sec. G-7.07, on this project perform the following:

(a) Provide, erect, and maintain moveable gates on intersecting roads closed to traffic at all points where local traffic movement terminates.

(b) Provide, erect, and maintain lights, signs, and barricades at the work limits on all intersecting roads which remain open to traffic.

(c) Provide, erect and maintain standard 40" x 24" size "Road Closed" signs, sign supports and lights at the following locations during periods in which the affected roads are closed to traffic:

1. Smith Road just northwest of the Zimmerman Road intersection.
2. Smith Road just southeast of the Hargrove Road intersection.
3. Jenks Road just northwest of the Pearson-Octa Road.
4. Jenks Road just southeast of Edgefield Road.

Lights, barricades, and danger and warning signs shall be provided at locations shown above in accordance with Sec. G-7.07. Barricades and gates shall be as detailed on Standard Construction Drawing No. G-7.07. Sign supports and lights for "Road Closed" signs shall be as detailed in the "Ohio Manual of Uniform Traffic Control Devices."

Payment for providing, erecting, maintaining and removing barricades gates, lights, signs, and sign supports shall be included in the lump sum price bid for "Maintaining Traffic."

RESTORING RUN-AROUND AREAS

When temporary run-around roads are no longer needed, the areas occupied by such roads shall be restored substantially to their original condition, as governed by the cross-sections, and as directed by the Engineer. However, if some alternate method of rehabilitating such areas is agreed upon between the property owner and the contractor, such agreement shall be submitted in writing to the Engineer for approval before it becomes effective.

TEMPORARY CULVERTS

Payment for construction, maintenance, and subsequent removal of temporary extensions of existing or proposed culverts and sewers required for construction of the Item S-15 Run-around shall be included in the lump sum price bid for the run-around.

A total of 2 sq yds of sod required at each endwall. 2 x no. of endwalls (38) = 76 sq yds of L-10 Sodding to General Summary.

DETAIL OF SOD COLLAR ON END WALLS

A total of 5½ sq yds of sod required at each No. 8 Catch Basin. 5½ x 67 basins = 368 sq yds. of L-10 Sodding.
A total of 125 sq yds. of jute matting required at the upstream side of each No. 8 Catch Basin.
125 x 67 basins = 8375 sq yds. of L-120 jute matting.
Quantities to General Summary.

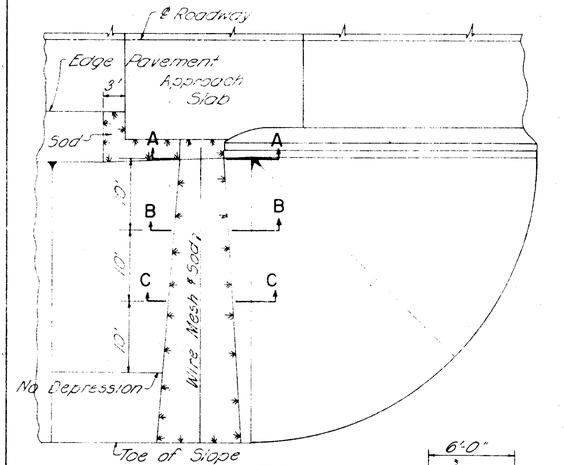
SECTION B-B



EROSION CONTROL DETAIL
BRIDGES ON SECONDARY ROADS

SPECIAL BERM AND SLOPE PROTECTION

Prior to placement of sod in the berm and slope, galvanized poultry fence shall be placed on the finished grade in strands which shall be at right angles to the directions of flow. Each strand shall be staked securely on top and bottom with stakes spaced at four foot intervals and alternated in rows four feet apart.

Stakes shall be 1"x 1"x 8" wood stakes and shall be perpendicular to the ground and flush with the finished grade.

The fence shall be straight line poultry fence or equivalent with strand width of four feet having a two inch mesh and all wires No 20 gage.

The strands of fencing shall be fastened together at twelve inch intervals by means of hog rings.

The fencing shall be secured to the wood stakes by metal staples.

Sod shall be laid in accordance with the Construction and Material Specifications Section L-10.07.

Payment for all of the above shall be included in the unit price bid for "Item L-10, Sodding for Special Berm and Slope Protection".

GREENE & FAYETTE COUNTIES

GRE. I-1.08 FAY. I-0.00

DESIGN SPECIFICATIONS: This structure conforms to the requirements of Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with revisions thereof.

REFERENCE: Reference shall be made to Standard Drawings
RB-1-55 rev. 2-2-59
AR-1-57 rev. 4-2-62
CSB-2-56 rev. 2-2-59 sheet 2, and 3

UTILITIES: The Contractor shall provide and maintain adequate protection to prevent damage to existing utilities. Any utility facilities encountered at the site of the work which will interfere with portions of the finished expressway or structures will be removed or relocated by others, unless otherwise shown. The Contractor shall coordinate his operations with the work of the utility owners or others who may be making the relocations and shall notify the owners of the utilities of his schedule sufficiently in advance to permit them to make the necessary alterations.

FOUNDATIONS SOUNDINGS: Foundation design and foundation quantities are based on a study of rod soundings and soil samplings made at the site. This sounding information may be inspected at the office of the Bureau of Bridges in Columbus, or in the Division office; but the State assumes no responsibility for the accuracy thereof.

BAR SIZE: Bar size is indicated in the bar mark. The first digit where three digits are used, and the first two where four are used, indicate the bar size number.

DECK PLACING PROCEDURE: In placing the deck concrete, construction joints will be permitted, parallel to the transverse reinforcing steel and near the middle of any span. Because of the flow of curing water from the surface of previously-placed deck concrete, the sequence of pours shall be upgrade, starting at the lowest end (or ends) on the inclined grade or on the vertical curve.

POROUS BACKFILL: 2 ft. thick, full length of abutment and wings, shall extend up to the underside of the approach slab.

WELDING of structural steel shall be class "A" except as otherwise shown. Welds shown as field welds may, at the option of the Contractor, be made in the shop. Class "B" welds are shown thus B

BEAM WEB WELDS: Butt welds in webs of beams may have convex reinforcement in accordance with Sect. S-7.22. Finishing flush by grinding is not required.

APPROACH SLAB DETAILS: See page 107.

EMBANKMENT PROCEDURE: The embankment shall be placed and compacted up to the finished spill thru slope and to the level of the subgrade for a distance of 200 feet back of the abutments, after a waiting period of 3 months, the excavation shall be made for the abutments.

EXCAVATION QUANTITY includes the removal of fill material between the top of the earth slope and the bottom of the abutment crossbeam.

CONTINUOUS BEAM SPLICES: If beams having depths differing by more than 1/8" are to be spliced by butt welding, the depth of the smaller-depth beam shall be increased by splitting the web longitudinally at a distance of 1 1/2" below the bottom of the top flange and for a distance sufficient to allow the flange to be bent up at a slope of not more than 3/8" per foot, after which the split in the web shall be completely welded with full depth penetration and ground flush.

SURFACE FINISH OF CONCRETE: The requirements of Sec. S-1.22, Rubbed Finish, shall apply to the following exposed concrete surfaces:
a. The entire superstructure except the top and bottom surfaces of sidewalks and roadways.
b. The entire surface of piers and abutments except bridge seats, backwalls and the face of spill-through abutments between outside beams.

MACHINE FINISH The concrete bridge deck shall be finished by the use of a finishing machine

SHEET LEAD shall conform to the requirements of ASTM Designation B 29 without restriction to the Common Desilverized type.

LEGEND: n.f. = near face
f.f. = far face
e.f. = each face

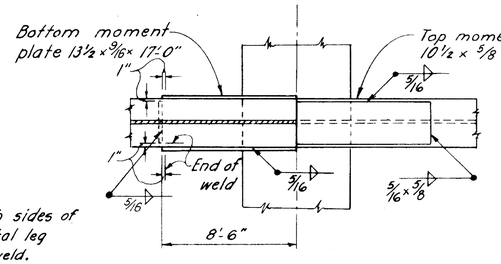
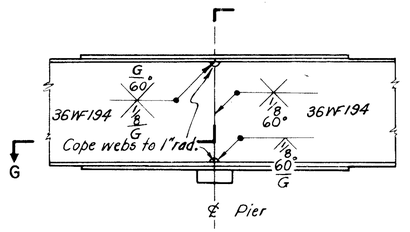
NOTE: All longitudinal bars 5602 except as otherwise shown. Lap 5602 bars 1'-11" minimum. 10 bars in a row.

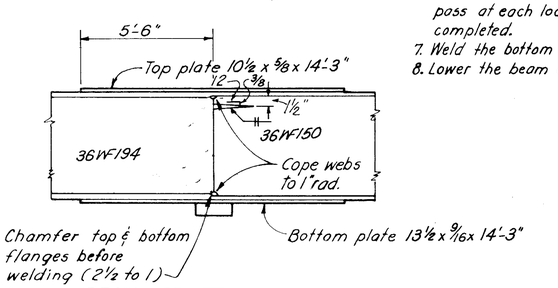
SHOP PAINTING STEEL: The surface preparation of all steel, requiring shop painting as per the PLANS and SPECIFICATIONS, shall be accomplished by blast cleaning or power tool cleaning, except as noted in the specifications regarding the use of Chromate Primers.



SECTION G



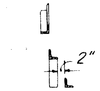
BEAM SPLICE DETAILS
PIER NO. 2



BEAM SPLITTING DETAILS
PIER NO. 1 & 3
(All welding same as shown on Beam Splice Details)

BEAM SPLICE WELDING PROCEDURE:

1. Raise ends of beams at Pier #1 or #3, 3½".
2. Butt-weld the beams at Pier #2, using the following sequence: make one pass on each flange, then two on the web; repeat using one pass at each location until welds are completed.
3. Weld the bottom and top moment plates at Pier #2.
4. Lower ends of beams.
5. Raise ends of beams 5/8" at each abutment.
6. Butt-weld the beams, using the following sequence: make two passes on each flange then two on the web: repeat, using one pass at each location until welds are completed.
7. Weld the bottom and top moment plates.
8. Lower the beam ends to final position.



SECTION H

* This dimension is the nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension, even though deviation from it may be necessary because the top flange of the beam may not have the exact camber or conformation required to place it parallel to the finished grade.

DECK SLAB HAUNCH: The haunch in the deck slab adjacent to the top of the steel beams, which is shown as 9" wide may vary from this dimension with a minimum of 6" and a maximum of 12". Maximum slope of haunch shall be one vertical to four horizontal. Payment for deck slab concrete shall be based on the 9" width.

* See proposal. ⊕From Sheet No. 13 & 105. ⊗ From Sheet No. 13.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures of the State of Ohio Department of Highways, dated 9-1-57, together with revisions thereof.

REFERENCE: Reference shall be made to Standard Drawings.
AS-1-54 rev. 7-5-62, A-1-54 rev. 12-1-54
AR-1-57 rev. 4-2-62, P-1-54 rev. 2-2-59
CS-2-54 sheets 1&2 rev. 2-2-59

UTILITIES: The Contractor shall provide and maintain adequate protection to prevent damage to existing utilities. Any utility facilities encountered at the site of the work which will intefere with portions of the finished expressway or structures will be removed or relocated by others, unless otherwise shown. The Contractor shall coordinate his operations with the work of the utility owners or others who may be making the relocations and shall notify the owners of the utilities of his schedule sufficiently in advance to permit them to make the necessary alterations

FOUNDATION SOUNDINGS: Foundation design and foundation quantities are based on a study of rod soundings and soil samplings made of the site. This sounding information may be inspected at the office of the Bureau of Bridges in Columbus, or in the Division office; but the State assumes no responsibility for the accuracy thereof.

BAR SIZE: Bar size is indicated in the bar mark. The first digit where three digit are used, and the first two where four are used, indicate the bar size.

CONSTRUCTION JOINTS: One construction jt. in the bridge slab shall be placed on the transverse centerline of the middle span or 1-0" off the transverse centerline if necessary to miss railing posts and transverse reinforcing bars. One longitudinal joint, on the centerline of roadway, will be permitted.

SURFACE FINISH OF CONCRETE: The requirements of Sec. 5-1.22, Rubbed Finish, shall apply to the exposed surfaces of the entire superstructure except the top and bottom surfaces of sidewalks and roadways.

CAMBER: Camber of 1/800 of the span shall be provided in each span to allow for dead load deflection. This is the amount of camber required before falsework is released. To obtain this, proper allowance shall be made for the deflection of falsework members.

CURBS: Shall be placed after the shoring under the slab has been released sufficiently to permit the slab spans to obtain full dead load deflection.

MACHINE FINISH: The concrete bridge deck shall be finished by the use of a finishing machine.

EXCAVATION QUANTITY: Includes the removal of fill material required for construction of the abutments and the removal of fill material above the level of the earth bench.

SECTION B

CAPPED PILE ABUTMENTS

NOTE: For additional details, see Std Drwg. A-1-54 : rev. 12-1-54

Abutment piles, 12 BP 53 shall be driven to a minimum bearing capacity of 23 tons per pile.

POROUS BACKFILL shall extend upward to the approach slab and to the surface of the earth shoulders, and outward to the surface of the embankment slopes. Excavation therefor, in excess of that required for construction of the footing, shall be considered as paid for in the bid price per cu.yd. paid for porous backfill.

EMBANKMENT PROCEDURE: The embankment shall be placed and compacted up to the finished spill-thru slope and to the level of the earth bench after which excavation shall be made for the abutment, and piles driven.

PIER PILE ENCASEMENT as shown on Std. Dwg. P-1-54 is not required. The painting of the piles shall extend to low water elevation or, if the proposed surface of the ground is above low water, it shall extend to at least one foot below the proposed surface of the ground.

CAPPED PILE PIERS

NOTE: For additional details, see Std. Drwg. P-1-54, rev. 2-2-59.

Pier Piles, 12 BP 53 shall be driven to a minimum bearing capacity of 30 tons per pile.

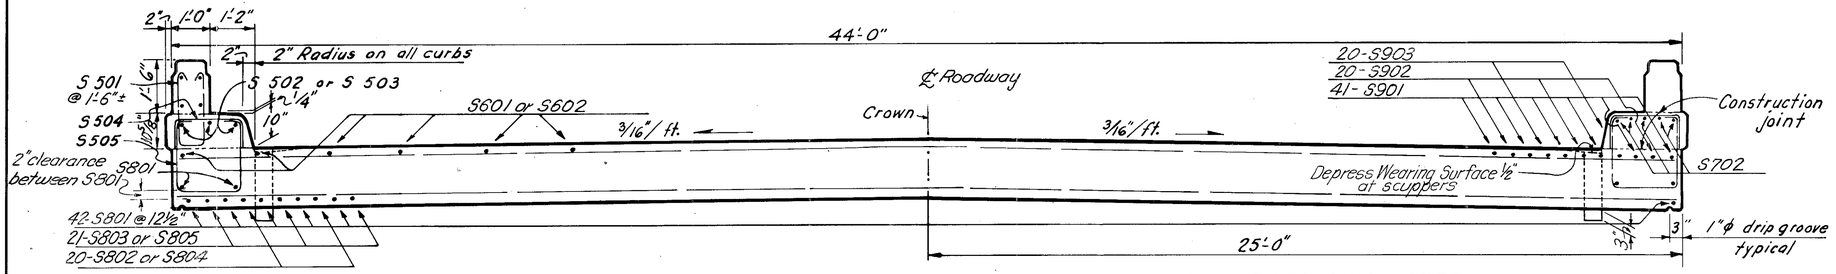
LONGITUDINAL SECTION ALONG BASE LINE

TYPICAL REINFORCING STEEL AT CENTER LINE OF SPAN



TYPICAL REINFORCING STEEL OVER PIER

(Looking in the direction of traffic)

Notes:
1. Place longitudinal steel approximately parallel to Base Line of Roadway.
2. Place transverse steel parallel to ℄ of pier & abutment.
3. Reinforcing Steel clearance: where two bars of different size are lapped, the clearance requirement for the larger bar shall also apply to the smaller bar. Reinforcing steel clearance from face of concrete shall be 1½" for #11 bars, 1¼" for #9 and #10 bars and 1" for all smaller bars. The above clearances do not include monolithic wearing surface.
4. S603 and S701 bars may be furnished in one length as shown or in pairs of equal length, lapped thirty diameters at the centerline of the roadway, or they may be furnished in pairs of different length in order to place the lap beyond a longitudinal construction joint at the centerline of roadway at the option of the contractor. Determination of the pay quanity will be according to the number and lengths shown on the plans.

GREENE & FAYETTE COUNTIES

GRE.1-1.08 FAY.1-0.00

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with revisions thereof.

REFERENCE: Reference shall be made to Standard Drawings

AR-1-57 rev. 4-2-62
CSB-2-56 rev. 2-2-59, sheet 2 and 3
RB-1-55 rev. 2-2-59

UTILITIES: The Contractor shall provide and maintain adequate protection to prevent damage to existing utilities. Any utility facilities encountered at the site of the work which will interfere with portions of the finished expressway or structures will be removed or relocated by others, unless otherwise shown. The Contractor shall coordinate his operations with the work of the utility owners or others who may be making the relocations and shall notify the owners of the utilities of his schedule sufficiently in advance to permit them to make the necessary alterations.

FOUNDATIONS SOUNDINGS: Foundation design and foundation quantities are based on a study of rod soundings and soil samplings made at the site. This sounding information may be inspected at the office of the Bureau of Bridges in Columbus, or in the Division office; but the State assumes no responsibility for the accuracy thereof.

BAR SIZE: Bar size is indicated in the bar mark. The first digit where three digits are used, and the first two where four are used, indicate the bar size number.

DECK PLACING PROCEDURE: In placing the deck concrete, construction joints will be permitted, parallel to the transverse reinforcing steel and near the middle of any span. Because of the flow of curing water from the surface of previously-placed deck concrete, the sequence of pours shall be upgrade, starting at the lowest end (or ends) on the inclined grade or on the vertical curve.

POROUS BACKFILL: 2 ft. thick, full length of abutment and wings, shall extend up to the underside of the approach slab

WELDING of structural steel shall be class "A" except as otherwise shown. Welds shown as field welds may, at the option of the Contractor, be made in the shop. Class "B" welds are shown thus B

BEAM WEB WELDS: Butt welds in webs of beams may have convex reinforcement in accordance with Sect. S-7.22. Finishing flush by grinding is not required.

APPROACH SLAB DETAILS: See page 107.

EMBANKMENT PROCEDURE: The embankment shall be placed and compacted up to the finished spill thru slope and to the level of the subgrade for a distance of 200 feet back of the abutments, after a waiting period of 60 days, the excavation shall be made for the abutments.

EXCAVATION QUANTITY includes the removal of fill material between the top of the earth slopes and the bottom of the abutment crossbeam.

CONTINUOUS BEAM SPLICES: If beams having depths differing by more than ⅛" are to be spliced by butt-welding, the depth of the smaller-depth beam shall be increased by splitting the web longitudinally at a distance of 1½" below the bottom of the top flange and for a distance sufficient to allow the flange to be bent up at a slope of not more than ⅜" per foot, after which the split in the web shall be completely welded with full depth penetration and ground flush.

SURFACE FINISH OF CONCRETE: The requirements of Sec. S-1.22, Rubbed Finish, shall apply to the following exposed concrete surfaces:
a. The entire superstructure except the top and bottom surfaces of sidewalks and roadways.
b. The entire surface of piers and abutments except bridge seats, backwalls and the face of spill-through abutments between outside beams.

MACHINE FINISH: The concrete bridge deck shall be finished by the use of a finishing machine.

SHEET LEAD shall conform to the requirements of ASTM Designation B 29 without restriction to the Common Desilverized type.

LEGEND: [illegible]

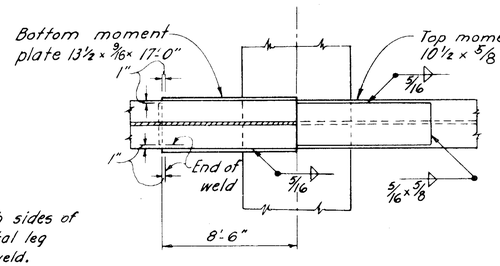
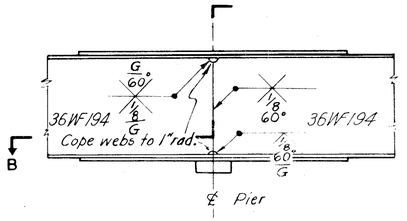
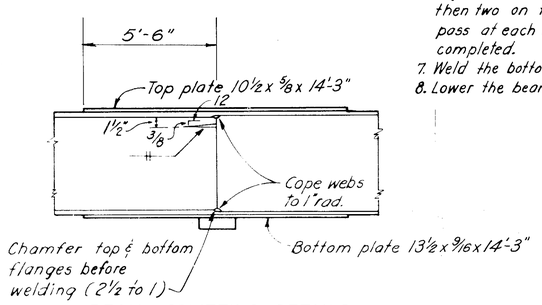
SHOP PAINTING STEEL: The surface preparation of all steel, requiring shop painting as per the PLANS and SPECIFICATIONS, shall be accomplished by blast cleaning or power tool cleaning, except as noted in the specifications regarding the use of chromate primers



SECTION B



BEAM SPLICE DETAILS
PIER NO. 2



BEAM SPLITTING DETAILS
PIER NO. 1 & 3

BEAM SPLICE WELDING PROCEDURE:

1. Raise ends of beams at Pier #1 or #3 3¼"
2. Butt-weld the beams at Pier #2, using the following sequence: make one pass on each flange, then two on the web; repeat using one pass at each location until welds are completed.
3. Weld the bottom and top moment plates at Pier #2.
4. Lower ends of beams.
5. Raise ends of beams ⅝" at each abutment.
6. Butt-weld the beams, using the following sequence: make two passes on each flange then two on the web: repeat, using one pass at each location until welds are completed.
7. Weld the bottom and top moment plates.
8. Lower the beam ends to final position.

SECTION A

* This dimension is the nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension, even though deviation from it may be necessary because the top flange of the beam may not have the exact camber or conformation required to place it parallel to the finished grade.

DECK SLAB HAUNCH: The haunch in the deck slab adjacent to the top of the steel beams, which is shown as 9" wide may vary from this dimension with a minimum of 6" and a maximum of 12". Maximum slope of haunch shall be one vertical to four horizontal. Payment for deck slab concrete shall be based on the 9" width.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures of the State of Ohio Department of Highways, dated 9-1-57, together with revisions thereof.

REFERENCE: Reference shall be made to Standard Drawings. AS-1-54 rev. 7-5-62, A-1-54 rev. 12-1-54 AR-1-57 rev. 4-2-62, P-1-54 rev. 2-2-59. CS-2-54 sheets 1 & 2 rev. 2-2-59

UTILITIES: The Contractor shall provide and maintain adequate protection to prevent damage to existing utilities. Any utility facilities encountered at the site of the work which will interfere with portions of the finished expressway or structures will be removed or relocated by others, unless otherwise shown. The Contractor shall coordinate his operations with the work of the utility owners or others who may be making the relocations and shall notify the owners of the utilities of his schedule sufficiently in advance to permit them to make the necessary alterations

FOUNDATION SOUNDINGS: Foundation design and foundation quantities are based on a study of rod soundings and soil samplings made at the site. This sounding information may be inspected at the office of the Bureau of Bridges in Columbus, or in the Division office; but the State assumes no responsibility for the accuracy thereof.

BAR SIZE: Bar size is indicated in the bar mark. The first digit where three digit are used, and the first two where four are used, indicate the bar size.

EXCAVATION QUANTITY: Includes the removal of fill material required for construction of the abutments and the removal of fill material above the level of the earth bench.

CONSTRUCTION JOINTS: One construction jt. in the bridge slab shall be placed on the transverse centerline of the middle span or 1'-0" off the transverse centerline if necessary to miss railing posts and transverse reinforcing bars. One longitudinal joint, on the centerline of roadway, will be permitted.

SURFACE FINISH OF CONCRETE: The requirements of Sec. 3-1.22, Rubbed Finish, shall apply to the exposed surfaces of the entire superstructure except the top and bottom surfaces of sidewalks and roadways.

CAMBER: Camber of 1/800 of the span shall be provided in each span to allow for dead load deflection. This is the amount of camber required before falsework is released. To obtain this, proper allowance shall be made for the deflection of falsework members.

MACHINE FINISH: The concrete bridge deck shall be finished by the use of a finishing machine.

CURBS: Shall be placed after the shoring under the slab has been released sufficiently to permit the slab spans to obtain full dead load deflection.

SECTION A

CAPPED PILE ABUTMENTS

NOTE: For additional details, see Std. Drwg. A-1-54, rev. 12-1-54.

Abutment piles (14 inch cast-in-place concrete piles) shall be driven to a minimum bearing capacity of 24 tons per pile.

POROUS BACKFILL shall extend upward to the approach slab and to the surface of the earth shoulders, and outward to the surface of the embankment slopes. Excavation therefor, in excess of that required for construction of the footing, shall be considered as paid for in the bid price per cu. yd. paid for porous backfill.

EMBANKMENT PROCEDURE: The embankment shall be placed and compacted up to the finished spill-thru slope and to the level of the earth bench after which excavation shall be made for the abutment and piles driven.

PIER PILE ENCASEMENT as shown on Std. Drwg. Nº P-1-54 may be omitted provided that the tapered portion, if any of all piers piles does not extend above the stream bed or the proposed surface of the ground. If the tapered portion of any pile extends above these limitations, the encasement will be required for all the pier piles. If the encasement is omitted the pile casings shall have a thickness of metal not less than Nº 7 gauge, and the painting of the piles shall extend to low water elevation or, if the proposed surface of the ground is above low water, the painting shall extend to at least one foot below the proposed surface of the ground.

NOTE: Shear keys may be formed with 12" length of 3"x 10" plank.

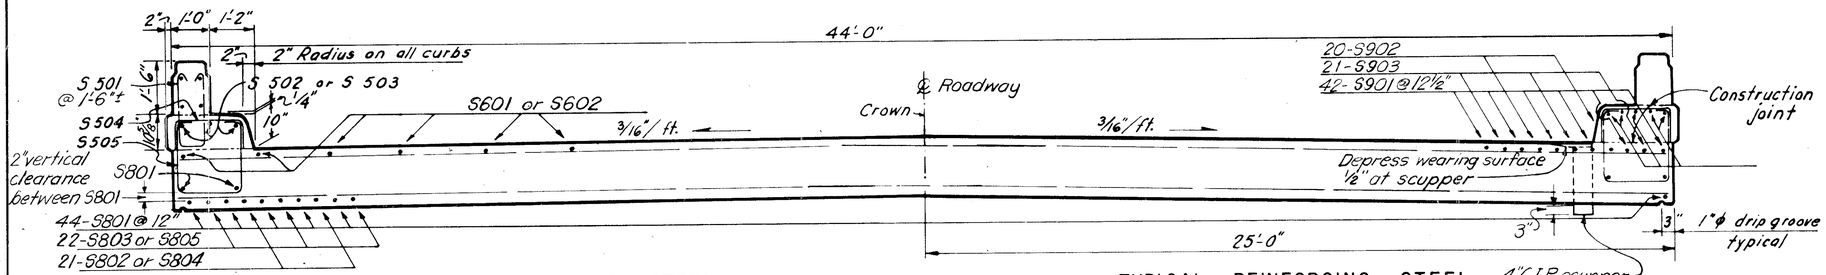
LONGITUDINAL SECTION ALONG BASE LINE



TYPICAL REINFORCING STEEL AT CENTER LINE OF SPAN

(Looking in the direction of traffic)

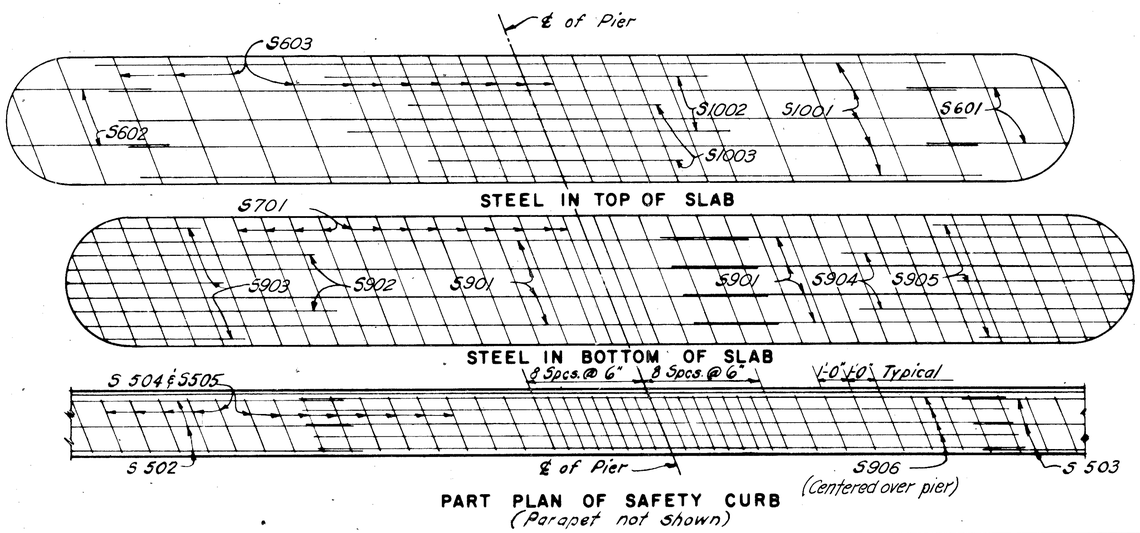
TYPICAL REINFORCING STEEL OVER PIER

Notes:
1. Place longitudinal steel approximately parallel to Base Line of Roadway.
2. Place transverse steel parallel to ℄ of pier ℄ abutment.
3. Reinforcing steel clearance: where two bars of different size are lapped, the clearance requirement for the larger bar shall also apply to the smaller bar. Reinforcing steel clearance from face of concrete shall be 1½" for #11 bars, 1¼" for #9 and #10 bars and 1" for all smaller bars. The above clearances do not include monolithic wearing surface.
4. S601 & S701 bars may be furnished in one length as shown or in pairs of equal length, lapped thirty diameters at the centerline of roadway, or they may be furnished in pairs of different length in order to place the lap beyond a longitudinal construction joint at the centerline of roadway, at the option of the contractor. Determination of the pay quantity will be according to the number and length of bars as shown on the project plans.



PART PLAN OF SAFETY CURB

GREENE & FAYETTE COUNTIES

GRE.1-1.08 FAY.1-0.00

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with revisions thereof.

REFERENCE: Reference shall be made to Standard Drawings

AR-1-57 rev. 4-2-62
RB-1-55 rev. 2-2-59
CSB-2-56 rev. 2-2-59, sh. 2&3

UTILITIES: The Contractor shall provide and maintain adequate protection to prevent damage to existing utilities. Any utility facilities encountered at the site of the work which will interfere with portions of the finished expressway or structures will be removed or relocated by others, unless otherwise shown. The Contractor shall coordinate his operations with the work of the utility owners or others who may be making the relocations and shall notify the owners of the utilities of his schedule sufficiently in advance to permit them to make the necessary alterations.

FOUNDATIONS SOUNDINGS: Foundation design and foundation quantities are based on a study of rod soundings and soil samplings made at the site. This sounding information may be inspected at the office of the Bureau of Bridges in Columbus, or in the Division office; but the State assumes no responsibility for the accuracy thereof.

BAR SIZE: Bar size is indicated in the bar mark. The first digit where three digits are used, and the first two where four are used, indicate the bar size number.

EMBANKMENT PROCEDURE: The embankment shall be placed and compacted up to the finished spill thru slope and to the level of the subgrade for a distance of 200 feet back of the abutments after a waiting period of 30 days, the excavation shall be made for the abutment.

EXCAVATION QUANTITY includes the removal of fill material between the top of the earth slope and the bottom of the abutment crossbeam.

SURFACE FINISH OF CONCRETE: The requirements of Sec. 5-1.22, Rubbed Finish, shall apply to the exposed surfaces of the entire superstructure except the top and bottom surfaces of sidewalks and roadways.

MACHINE FINISH The concrete bridge deck shall be finished by the use of a finishing machine.

SHEET LEAD shall conform to the requirements of ASTM Designation B 29 without restriction to the Common Desilverized type.

APPROACH SLAB DETAILS: See page 107.

DECK PLACING PROCEDURE: In placing the deck concrete, construction joints will be permitted, parallel to the transverse reinforcing steel and near the middle of any span. Because of the flow of curing water from the surface of previously-placed deck concrete, the sequence of pours shall be upgrade, starting at the lowest end (or ends) on the inclined grade or on the vertical curve.

POROUS BACKFILL: 2 ft. thick, full length of abutment and wings, shall extend up to the underside of the approach slab.

WELDING of structural steel shall be class "A" except as otherwise shown. Welds shown as field welds may, at the option of the Contractor, be made in the shop. Class "B" welds are shown thus B

BEAM WEB WELDS: Butt welds in webs of beams may have convex reinforcement in accordance with Sect. 5-7.22. Finishing flush by grinding is not required.

CONTINUOUS BEAM SPLICES: If beams having depths differing by more than 1/8" are to be spliced by butt welding, the depth of the smaller-depth beam shall be increased by splitting the web longitudinally at a distance of 1 1/2" below the bottom of the top flange and for a distance of 1 1/2" below the bottom of the top flange and for a distance sufficient to allow the flange to be bent up at a slope of not more than 3/8" per foot, after which the split in the web shall be completely welded with full depth penetration and ground flush.

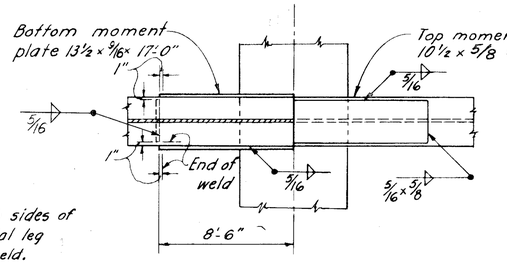
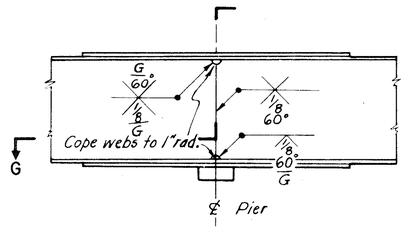
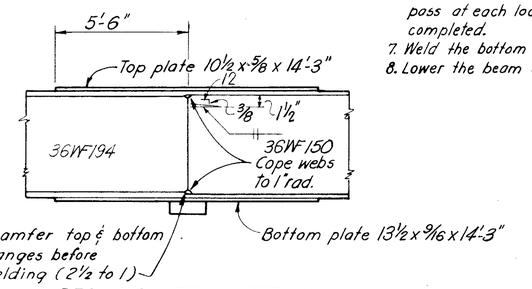
SHOP PAINTING STEEL: The surface preparation of all steel, requiring shop painting as per the PLANS and SPECIFICATIONS, shall be accomplished by blast cleaning or power tool cleaning, except as noted in the specifications regarding the use of chromate primers



SECTION G



BEAM SPLICE DETAILS
PIER NO. 2



BEAM SPLITTING DETAILS
PIER NO. 1 & 3

NOTE: All welding same as shown on Beam Splice Details.

SECTION H

BEAM SPLICE WELDING PROCEDURE:

1. Raise ends of beams at Pier #1 or #3, 3½"
2. Butt-weld the beams at Pier #2, using the following sequence: make one pass on each flange, then two on the web; repeat using one pass at each location until welds are completed.
3. Weld the bottom and top moment plates at Pier #2.
4. Lower ends of beams.
5. Raise ends of beams 5/8" at each abutment.
6. Butt-weld the beams, using the following sequence: make two passes on each flange then two on the web: repeat, using one pass at each location until welds are completed.
7. Weld the bottom and top moment plates.
8. Lower the beam ends to final position.

* This dimension is the nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension, even though deviation from it may be necessary because the top flange of the beam may not have the exact camber or conformation required to place it parallel to the finished grade.

DECK SLAB HAUNCH: The haunch in the deck slab adjacent to the top of the steel beams, which is shown as 9" wide may vary from this dimension with a minimum of 6" and a maximum of 12". Maximum slope of haunch shall be one vertical to four horizontal. Payment for deck slab concrete shall be based on the 9" width.

GENERAL INFORMATION

INTRODUCTION

The project consists of the proposed construction of 5.5 miles of SR 1 (IR 71), beginning approximately 1 mile south of Bowersville, extending northeastward, terminating 1200 feet east of Jenks Road (Twp. Rd. 83). Also included in this report are the profiles of five intersecting roads - Orchard Grove Road, Powers Road, Smith Road, County Road 13, and Jenks Road (Twp. Rd. 83).

The proposed grades indicate the following:

Mainline (SR 1) - cuts, ranging between 0 and 4 feet in depth, and fill embankments, ranging between 0 and 14 feet in height.

Orchard Grove Road - fill embankments, ranging between 0 and 23 feet in height.

Smith Road - fill embankment, ranging between 0 and 18 feet in height.

County Road 13 - fill embankment, ranging between 0 and 22 feet in height.

Jenks Road - fill embankment, ranging between 0 and 24 feet in height.

GEOLOGY OF THE PROJECT

The project is located on the glaciated till plain region, where glacial-derived soils, in excess of 20 feet thick, overlie shale and limestone bedrock, of Silurian age.

EXPLORATION

Exploratory borings were made by means of truck-mounted mechanical earth auger and hand auger (in areas of difficult access), between March 26 and April 3, 1962.

INVESTIGATIONAL DISCLOSURES

Mainline (SR 1) and Intersecting Roads

Materials occurring immediately below proposed grade and in the embankment foundation areas are comprised of sandy silts, silts, silt clays, and clays, in the A-4, A-6 and A-7-6 classifications, generally having moisture contents in the lower portion of the plastic range.

Frost susceptible silts were encountered within three feet of grade at station 5+50, Mainline; and station 30+00, County Road 13.

Sod and/or Topsoil=X'=Approximate depth.

Rem material.

Auger boring - plan view.

Auger boring plotted to vertical scale only.

Water content nearly equal to or greater than liquid limit.

Indicates a non-plastic material with high water content.

Free water.

NOTE: Figures beside borings indicate water content in percent. e.g. 15
