1963 SPECIFICATIONS

The Standard Specifications of the State of Ohio, Department of Highways, including changes and supplemental specifications listed in the proposal, shall govern this improvement.

The Right of Way for this improvement will be provided by the State of Ohio.

I hereby approve these plans and declare the making of this improvement will not require the closing of the highway to traffic and that provisions for the maintenance and safety of traffic will be as set forth on the plans and estimates.

ITEM		DESCRIPTION
(1)	I-35	1½" Asphaltic Concrete Surface Course (85-100), Type "A"
(2)	I-30	Bituminous Prime Coat using Tar, Sec. M 5.7, RT 2 or 3, applied at the rate of 0.2 Gal./S.Y.
(3)	B-19	8" Aggregate Base Course
(4)	L-9	Seeding and Protecting
(5)	I-9	Stone Underdrains, No. 2
(6)	I-15	Guard Rail, Steel Beam Standard Type (Deep)

NOTE: For other pavement thicknesses and widths, see the following sheets.

SR 150 in Rayland,	see sheet 49
SR 7 in Warrenton,	see sheet 8
SR 7 at Shannon Run,	see sheet 11
SR 7 at Rush Run,	see sheet 14
CR 17,	see sheet 19
SR 7 at Tarr's Run,	see sheet 42

NOTE: I-9 Underdrains shall be spaced alternately right and left at 25 foot intervals as directed by the Engineer. Space at 25 foot intervals on low side of superelevated sections.

NOTE: For details not shown on this drawing see Standard Construction Drawing numbers DR-1, RI-1, & T-35

GENERAL NOTES

1. For Fills 10 and Over use 2:1 Slopes
2. For Fills under 10 use 3:1 Slopes
3. For Cuts 5' and under use 3:1 backslopes
4. For Cuts over 5' use 2:1 backslopes
5. Fills are measured from edge of shoulder to existing ground. Cuts are measured from bottom of ditch to existing ground

4/70

JEFFERSON COUNTY
JEF-7-(2.85)(4.85)(5.25)(10.28)
JEF-150-12.85

FIELD OFFICE
The Contractor shall, in accordance with Sec. S-0.01(b), provide for the exclusive use of the State's employees, a suitable field office having a minimum of 300 sq. ft. of floor space within ten (10) days after starting work on this contract. The Contractor shall have a telephone installed and maintained in this field office during the construction of this project. (The Contractor shall also provide and install wiring and outlets suitable for connecting electric lights and office equipment in the field office and provide 110-volt alternating current to the office during the entire period of construction of this project).
The location of the field office shall be determined by the Engineer.

UNDERGROUND UTILITIES
The locations of the underground utilities shown on the plans have been obtained by diligent field checks and searches of available records. It is believed that they are essentially correct, but the State of Ohio makes no guarantees as to their accuracy or completeness.

UTILITY ADJUSTMENT
Any or all work required for Public or Private Utilities will be done by and at the expense of their respective owners, unless otherwise noted on these plans.

NON-RIGID PAVEMENT REMOVAL
Removal and disposal of existing non-rigid pavement, unless otherwise indicated on these plans, shall be measured and paid for as Item E-1, Roadway Excavation.

REMOVAL OF EXISTING PIPE
The removal of all existing pipe drains within the limits of proposed excavation items shall be included for payment in the unit prices bid for the respective excavation items, unless otherwise itemized in the plans.

UTILITY OWNERSHIP
Ohio Power Company, Canton, Ohio
Ohio Bell Telephone Co., Columbus, Ohio
Wheeling Steel Corporation (Gas Line), Steubenville, Ohio
Manufacturers Light & Heat Co., Steubenville, Ohio

PART WIDTH CONSTRUCTION
Because of the necessity of building this project under traffic and constructing the pavement part at a time, extreme care shall be taken to prevent the construction of a butt joint on centerline in the B-19 course. This shall be accomplished by building the B-19 course placed with the first portion of the pavement built, at least eighteen (18) inches beyond the centerline and by surfacing no closer than eighteen (18) inches to this edge of the above courses. When the second portion of the pavement is built, at least twelve (12) inches of the *B-19 course* shall be broken down and thoroughly keyed in with the newly placed corresponding course in the second portion of the pavement built. Payment for this operation shall be included in the unit price bid for *Item B-19.*

ROUNDING OF CORNERS SHOWN ON CROSS SECTIONS
The rounded corners shown on Standard Drawing RI-1, as modified by the typical sections, apply to all cross sections, even though otherwise shown on these plans.

CONSTRUCTION LAYOUT STAKES
See note in proposal describing the work included in this lump sum pay item.

SEEDING
Quantities for seeding are calculated for the soil areas between the work limits, as shown on the cross sections.

SPECIAL SEEDING PREPARATION AREAS
The references in the first paragraph of Sec. L-9.11 to preparation of the seed bed in front of residences, etc., shall, on this project, be considered to be particularly applicable in the following areas:

Station 1+20 to 1+75 Left Old Co. Rd. 17

SCARIFICATION OF EXISTING FLEXIBLE PAVEMENT
Within the limits of construction where the existing flexible pavement will have less than six (6) inches of fill placed upon it, the pavement shall be thoroughly scarified for its full depth, mixed with sufficient soil and properly recompacted to insure the elimination of any planes of separation between it and the embankment placed thereon. Payment for scarification as described above shall be included in the unit price bid for Item E-1, Roadway Excavation.

SHOULDER DRESSING
Between stations 225+75 and 227+00 and between 149+75 and 151+00, the shoulders and slopes shall be graded and seeded and left in a neat condition. Payment for grading, even though specific quantities have not been indicated, shall be included in the price bid per cubic yard for Item E-1, as per plan. Quantities for Item L-9 Seeding have been provided.

DESIGNED THICKNESS
The pavement course thicknesses of T-35 and B-35 shown on the plan are "designed" thicknesses as described in sections T-35.01 and B-35.01.

ITEM I-5 FLAP GATES
The 24" Flap gate is to be wall mounted, Armco Model 10-C, Brown and Brown Type M-5 Class I, or an approved equal. The gate shall be fitted with brass bolts, nuts, and bushings.
Payment for item I-5, Flap Gate, shall include furnishing and placing of bolts, nuts, bushings, hinge bars and gate, complete in place on the proposed wall.

REMOVAL OF TREES AND STUMPS
All trees and stumps lying within the construction limits of this project shall be removed under the lump sum price bid for Item E-9, Removal of Trees and Stumps, except that those trees for which protection and preservation work is indicated elsewhere in these plans shall not be removed.

The following is an approximate estimate of the number of trees and stumps to be removed:

Sizes	No. Trees	No. Stumps
12" - 18"	32	1
18" - 24"	2	0
24" - 30"	8	0
30" - 36"	0	0
36" - 42"	0	0
42" - 48"	0	0
Over 48"	0	0

The above estimate is approximate and the State of Ohio reserves the right to order the removal of additional trees or stumps outside of the limits of construction but within the right-of-way and/or easement lines. Payment for the removal of these additional trees or stumps shall be included in the lump sum price bid for Item E-9, Removal of Trees and Stumps.

PLUGGING PIPE
The upstream ends of all pipe or tile lines intercepted by earthwork operations (and, where indicated, the ends of pipe lines to be abandoned in place) shall be effectively blocked and covered. Broken pieces and portions of pipe or tile shall be removed until a whole length is encountered which shall be blocked with concrete, flat stone or brick laid in mortar, or a precast clay or concrete stopper. Payment for the above work shall be included in the unit price bid for Item E-1, Roadway Excavation.

DRAINAGE OF BASE MATERIAL
Where the base material is drained by I-9 Stone Underdrains through the shoulders to the fill slope or the ditch line, the Contractor shall finish, seed, and mulch the slopes so as not to impede drainage of the base material. The actual area of the outcrop or the I-9 Underdrains shall not be seeded.

T-10 MODIFIED
This item shall consist of furnishing No. 3 or No. 34 Aggregate, when directed by the Engineer, in lieu of the grading specified under Item T-10. All other provisions of Item T-10 shall apply. The weights to be used in calculating the yardage to be paid for under this item shall be the same as those indicated in the Construction and Materials Specifications for crusher run or bank run materials.

120" & 126" BITUMINOUS COATED CORRUGATED METAL STRUCTURES
The metal plates that are incorporated into the lower ¼ of these sectional plate structures shall be shop coated in accordance with Sec. M-6.4 (c). The remainder of the plates need not be coated. After installation of the structures, damaged or worn spots in the bituminous coating of the structures shall be re-coated using materials and methods recommended by the manufacturer and as directed by the Engineer.
Payment for all of the above shall be included in the unit price bid for the Item I-1 Structures.

GENERAL NOTES

FED. RD. DIVISION	STATE	PROJECT		5
2	OHIO			70

JEFFERSON COUNTY
JEF-7-(2.85)(4.85)(5.25)(10.28)
JEF-150-12.85

CONNECTIONS TO EXISTING PIPE
At places where the plans provide for proposed drainage pipe to be connected to existing pipes, it shall be the responsibility of the Contractor to locate the existing pipe both as to line and grade before he starts to lay the proposed pipe. The cost of this operation shall be included in the unit price bid for the pertinent pipe item.

ITEM I-1 TUNNEL LINER PLATE STRUCTURE, AS PER PLAN
In lieu of the provisions of Section I-1.02 under Class A Number 3, material furnished for the liner plate structure *shall be as manufactured by Armco Drainage & Metal Products, Inc, or Republic Steel Corp, or* an approved equal. Base metal composition, depth and span of the corrugations, and size and spacing of bolts, *bolt holes, & grouting plugs* shall be in accordance with the details of the manufacturer and installation of the structure shall be in accordance with his recommendations. However, gage and section modulus of material furnished shall not be less than that indicated on the structure details. Galvanizing shall be in accordance with Paragraph 6 of Section M-6.4(a) and shall be done after corrugating, forming, and punching the plates. Granular bedding will not be required. The completed structure shall conform to the requirements of Paragraph 10 of Section M-6.4(a). Bituminous coating shall meet the requirements of Section M-6.4(c).

EROSION CONTROL
Items I-10, I-14, and L-10 are provided in these plans for erosion control. Rock of a stable nature will not be removed in order to place any of these items. The Engineer shall check and non-perform quantities or adjust locations and quantities for these items where indicated by field conditions during construction.

SEALING OF PIPE JOINTS
Where connections are made between rigid and flexible pipe sections or between pipe sections of different kind or type of end fabrication, whether required by the plans, arising from permissible use of optional materials, or encountered in connection to existing facilities, the joint shall be sealed, if sealing is required by the specifications, by means of a Class "E" concrete collar having a minimum thickness of 6 inches and a minimum length of 12 inches. Payment for sealing as described above shall be included in the unit price bid for the pertinent pipe item.

SOD AROUND CATCH BASINS
An 18" strip of sod shall be placed along all sides of each catch basin, except where paved gutter is adjacent to the catch basin. Payment shall be under Item L-10.

2-3 CATCH BASIN MODIFIED
The modification consists of the elimination of the *steel bars in the side inlet.*

GUARD RAIL POST ANCHORS
At Sta. 17+50 Lt & Rt County Road No. 17, anchorage shall be provided for the existing guard rail. The anchorage shall be in accordance with that shown on Standard Construction Drawing I-15 No. 2. Cost of all materials and labor necessary to construct the anchorage and to provide proper tension in the existing guard rail, to be left in place, shall be included in the price bid for I-15 Guard Rail *Removed and Disposed of, as per plan.*

SPECIAL DITCHES
For special ditch grades, see Cross Sections.

ITEM SPECIAL - FILL AND PLUG EXISTING PIPE CULVERT
This item shall consist of the construction of bulkheads in the existing pipe culvert and filling the area thus sealed off with sand or other granular material approved by the Engineer.

Bulkheads shall be located at the limits of the area to be filled as indicated on the plans. The bulkheads shall consist of brick or concrete masonry with a minimum thickness of 12 inches.

The fill material shall be pumped into place or placed by some other means approved by the Engineer, so that, after settlement, at least 90 percent of the cross-sectional area of the culvert for its entire length shall be filled. The footage of filled and plugged culvert to be paid for shall be the actual number of linear feet (measured along the centerline of the culvert from outer face to outer face of bulkheads) filled and plugged as described above. The footage, measured as provided above, shall be paid for at the contract unit price bid per linear foot for "Item Special, Fill and Plug Existing Pipe Culvert", which price and payment shall constitute full compensation for furnishing, hauling, and placing all the necessary materials, and for all labor, equipment, tools, and incidentals necessary to complete this item.

ITEM SPECIAL - MIXING CALCIUM CHLORIDE AND AGGREGATE
See note in Proposal.

TEMPORARY RUNAROUND ROAD USING CLASS "A" PAVEMENT AND RESTORATION OF EMBANKMENT IN ACCORDANCE WITH E-1.08, AS PER PLAN
Reference is made to the temporary runaround road between Stations 272+80 and 280+77, S.R. 7.

1. The excavation quantities established in the plan pertain to the excavation within the bridge limits only. The excavation quantities outside of the bridge limits are included with the temporary runaround road for payment.

2. Restoration of all embankment within the above limits shall be in accordance with Sec. E-1.08.

STRUCTURE NO. JEF-7-0525 (RUSH RUN) CONSTRUCTION SEQUENCE

1. Construct the temporary runaround road.

2. Place traffic on the temporary runaround and construct the east half of the structure complete.

3. Place traffic on the east half of the structure and remove the temporary runaround.

4. Construct the west half of the structure.

TIME OF COMPLETION
WARRENTON
Ninety (90) continuous calendar days shall be allowed to complete all work at this site on S.R. 7 and County Road No. 16.

SHANNON RUN
Sixty (60) continuous calendar days shall be allowed to complete all work at this site.

MAINTENANCE OF TRAFFIC
S.R. 7 - Sta. 147+63 to Sta. 155+44
A Class "A" Temporary Runaround shall be provided as shown on the plans and two-way traffic shall be maintained at all times.

S.R. 7 - Sta. 223+00 to Sta. 229+00
A Class "A" Temporary Runaround shall be provided as shown on the plans and two-way traffic shall be maintained at all times.

S.R. 7 - Sta. 272+80 to Sta. 280+77
A Class "A" Temporary Runaround shall be provided as shown on the Plans and two-way traffic shall be maintained at all times.

County Road No. 16
Two-way traffic shall be maintained at all times by use of either the existing pavement, the proposed Class "A" Temporary Pavement, to be left in place, the Temporary Connection, or temporary roadways surfaced with T-10 aggregate and stabilized with *I-4* Calcium Chloride. Traffic shall be maintained on a minimum surface width of 16 feet.

County Road No. 17 and Old County Road No. 17
Two-way traffic shall be maintained at all times by use of either the existing pavement, the proposed pavement or temporary roadways surfaced with T-10 aggregate and stabilized with *I-4* Calcium Chloride. Traffic shall be maintained on a minimum surface width of 16 feet.
S.R. 150 - One-way traffic shall be maintained at all times.

CONTRACTOR'S MAINTENANCE RESPONSIBILITY
On this project, the Contractor's responsibility for maintenance of the existing pavement per Sec. G-7.07 shall be limited to those portions of the existing pavement lying within the proposed work limits.

TEMPORARY CONNECTIONS AND MAINTENANCE OF LOCAL TRAFFIC
525 C.Y. of T-10 Aggregate, 525 C.Y. of T-10 Aggregate Modified and 21.0 Tons of *I-4* Calcium Chloride are to be used at the direction of the Engineer for temporary connections not shown on the plans. Payment for construction, maintenance and subsequent removal and restoration to original lines of temporary connections, except for furnishing and placing items T-10, T-10 Modified and *I-4* for maintaining traffic, shall be included for payment in the lump sum bid for "Maintaining Traffic."

PAYMENT FOR TEMPORARY ROADWAYS
Payment for construction, maintenance and subsequent removal, wherever required, of temporary roadways not separately itemized under S-15, except for furnishing and placing of Items *I-4, T-10 and T-10 Modified, shall be included in the lump sum price bid for Maintaining Traffic.*

ALTERNATE METHODS
If the Contractor so elects, he may submit alternate methods for the maintenance of traffic provided the intent of the above provisions is followed and no additional inconvenience to the traveling public results therefrom. No alternate plan shall be placed into effect until approval has been granted, in writing, by the Director.

TARRS RUN - OLD S.R. 7
One-way traffic shall be maintained at all times.

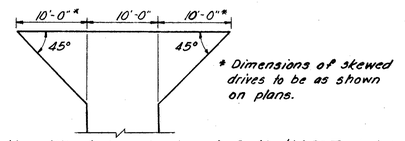
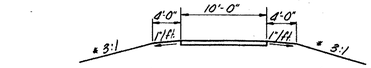
INTERSECTION DETAIL - C.R. 17 ℄ Old C.R. 17



* Dimensions of skewed drives to be as shown on plans.

Use shoulder widths & slopes as shown in Residential Dr. Typ. below.

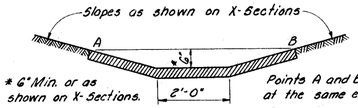
FIELD & RESIDENTIAL DRIVE DETAIL



* Unless otherwise shown. Type pavement as shown on plans.

TYPICAL SECTION RESIDENTIAL DRIVE

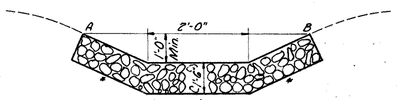
Note: See Sheet N° 20 for Quantities.



* 6" Min. or as shown on X-Sections.

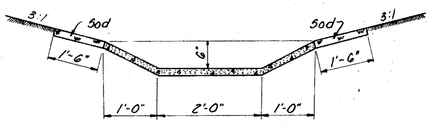
Points A and B are to be at the same elevation.

ROADWAY DITCH SOD DETAIL



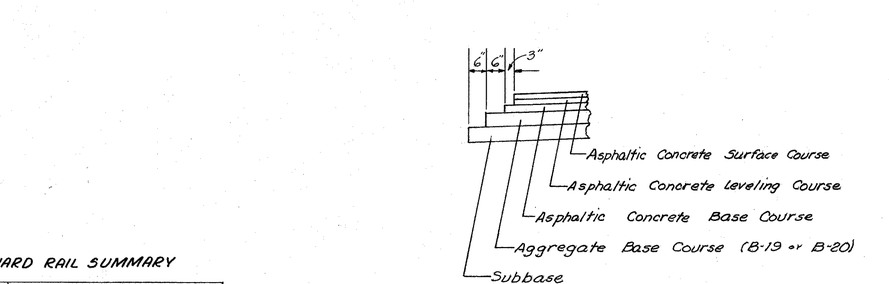
* See X-Sections for Slopes.
Points A and B are to be at the same elevation.

ROADSIDE DITCH DUMPED ROCK DETAIL



Note: Sod is to be paid for under "Item L-10 Sodding."

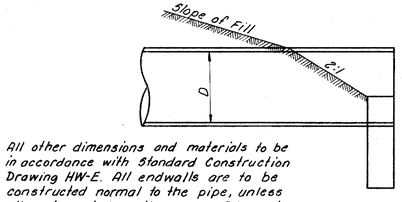
SOD DETAIL FOR TYPE I PAVED GUTTER



NOTE: The abandoned gas well casing shall be cut off at least 4½ ft. below the finished grade. Cost of this operation shall be included in the unit price bid for Masonry, Item I-2.
Pipe specials shall be included in the unit price bid for the Vent pipe, Item I-1, Sec M-6.9 Std. Wt, Galvanized, with Type 4 Backfill, As Per Plan.

ABANDONED GAS WELL VENT DETAIL

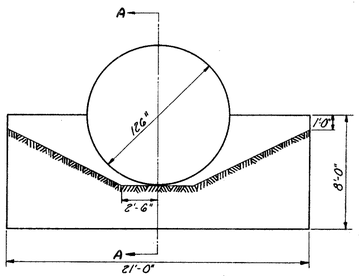
STA. 14+91 53' RT.
(SEE SHEETS 19, 20 & 22)



All other dimensions and materials to be in accordance with Standard Construction Drawing HW-E. All endwalls are to be constructed normal to the pipe, unless otherwise noted on the plans. Dimensions shown on the plans are to the outside face of endwalls.

HW-E ENDWALL

EDGE COURSE DETAIL (See Sh. 8 & 11)



TUNNEL LINER PLATE PIPE CULVERT END WALL DETAILS 543+05, 148.90' Rt. ℄ S.R. 7

Totals to General Summary

GENERAL NOTES

Foundation design and foundation quantities are based on a study of rod soundings and soil sampling soundings made at the site. This sounding information may be inspected in the office of the Bureau of Bridges in Columbus or in an abridged form in the Division office, but the State assumes no responsibility for the accuracy thereof.

These structures conform to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with revisions thereof, dated 2-21-58.

Traffic Maintenance: For traffic maintenance details see Roadway Plans.

Granular Borrow: The material for this Item shall meet the requirements of I-22.02 and shall be compacted according to Item E-1.08.

Excavation Quantity: Excavation quantity for Structure No JEF-7-0485 includes the removal of material to the bottom of the Granular Borrow.

Porous Backfill: Excavation in excess of that required for the construction of the culverts, due to porous backfill, shall be considered as paid for in the price per cubic yard paid for porous backfill.

Existing Structures: The existing structures shall remain in place.

REPLACEMENT BARS
IF REINFORCING BARS ARE FABRICATED FROM STOCK WHICH HAS PREVIOUSLY BEEN TESTED AND APPROVED BY THE OHIO HIGHWAY TESTING LABORATORY, TEST SAMPLES AS PROVIDED IN SEC. S-4.02 NEED NOT BE FURNISHED AND REPLACEMENT BARS WILL NOT BE REQUIRED.

GENERAL NOTES

Foundation design and foundation quantities are based on a study of rod soundings and soil sampling soundings made at the site. This sounding information may be inspected in the office of the Bureau of Bridges in Columbus or in an abridged form in the Division office, but the State assumes no responsibility for the accuracy thereof.

This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with revisions thereof dated 2-21-58 & 1-1-62.

Porous Backfill: Excavation in excess of that required for the construction of the culverts, due to porous backfill, shall be considered as paid for in the bid price per cubic yard paid for porous backfill.

* MANHOLE REINFORCING
THESE BARS ARE INCLUDED WITH THE MANHOLE FOR PAYMENT

REPLACEMENT BARS
IF REINFORCING BARS ARE FABRICATED FROM STOCK WHICH HAS PREVIOUSLY BEEN TESTED AND APPROVED BY THE OHIO HIGHWAY TESTING LABORATORY, TEST SAMPLES AS PROVIDED IN SEC. S-4.02 NEED NOT BE FURNISHED AND REPLACEMENT BARS WILL NOT BE REQUIRED.

NOTES

POROUS BACKFILL: Porous backfill shall extend upward to the I-22 and to the surface of the earth shoulders and outward to the surface of the embankment slopes. Excavation, therefore, in excess of that required for the construction of the abutment, shall be considered as paid for in the price per cubic yard paid for porous backfill.

CONTRACTION and EXPANSION JOINTS: Contraction and expansion joints shall be waterproofed by installing a premolded sealing strip in a 13"x 3/8" recess extending from the top of the footing to the approach slab seat. A joint shall be provided in the abutment portion of the end dam at each joint.

Reqd camber	0	0	0	0	0	0	0	0	0

NOTES

Place intermediate crossframes perpendicular to beams in each span.

Place bearing devices normal to end span beams at abutments and normal to beams in Span 2 of Piers

For bearing plate details see C.S.B-2-56

Abutment ends of beams shall be cut to maintain 3" clear between ends of beams & face of backwall

BEAM SPLICE WELDING PROCEDURE

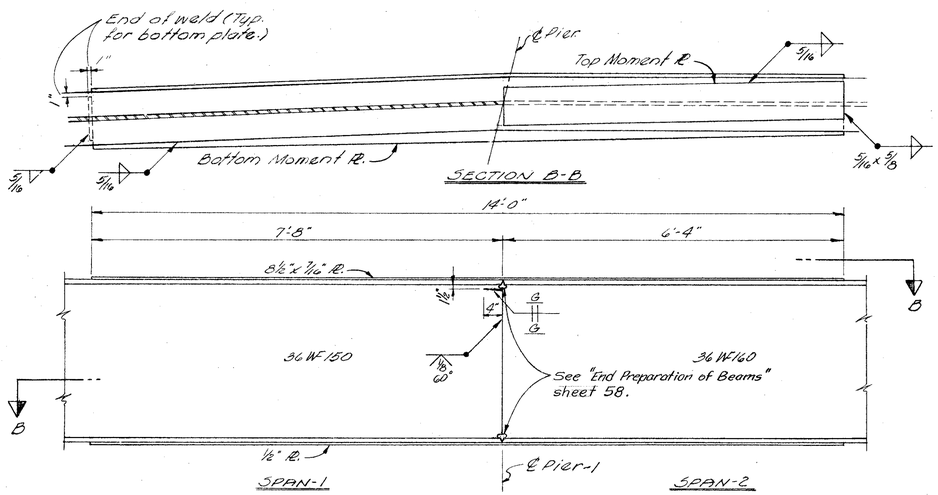
1- Raise the beam ends 3/16" at the South Abutment

2. Butt-weld the beam flanges and web at the piers using the following sequence: make one pass on each flange, then two on the web, repeat, using one pass of each location, until welds are completed.

3. Weld the bottom and top moment plates at piers

4- Weld crossframes indicated by double lines on the framing plan.

5- Lower beam ends to final position.



"G" indicates grinding

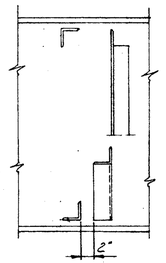
TRANSVERSE SECTION



SECTION A-A

* These are nominal dimensions. The quantity of deck concrete to be paid for shall be based on these dimensions, even though deviation from them may be necessary because the top flange of the beam may not have the exact camber or conformation required to place it parallel to the finished grade

** The haunch in the deck slab adjacent to the steel beams, which is shown as 9" wide may vary from this dimension with a minimum of 6" and a maximum of 12". Maximum slope of haunch shall be one vertical to four horizontal. Payment for deck slab shall be based on a 9" width.

NOTE:
Transverse slab bars shall be placed parallel to the ℄ of bearing and be spaced at 9" ℅ along the reference chord.

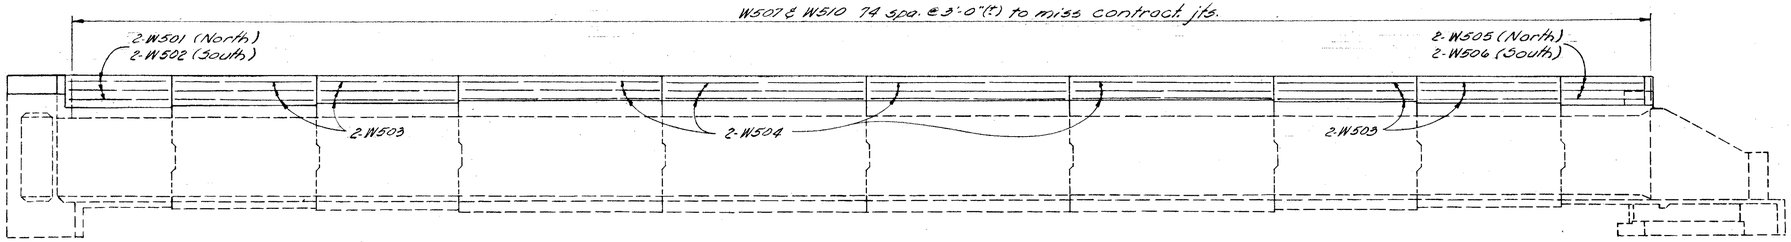
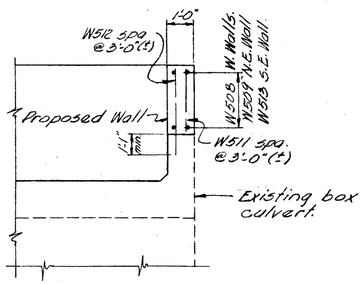
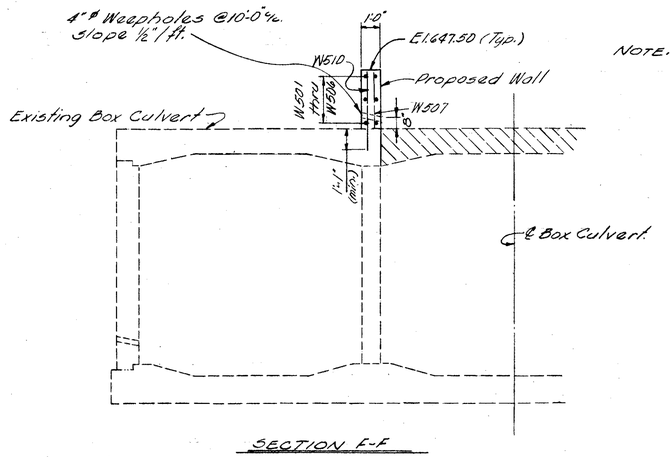
W507 & W510 74 spa. @ 3'-0"(±) to miss contract jts.



SECTION THRU ℄ OF CULVERT



SECTION E-E



SECTION F-F

NOTE: W507, W510, W511 & W512 shall be cut to proper length in field. Cost is included in Item 5-4.

NOTES:

Cross-hatched section shall be removed in accordance with Item 5-22 and shall be disposed of in accordance with Item 524.

The reinforcing steel in the top slab shall be removed to approximately 2 inches from the surface of the proposed wall. All depressions shall be filled with grout and the surface shall be neatly finished in accordance with Item 5-1.22. Cost shall be included with Item 5-22.

Vertical reinforcing bars on the back side of the proposed wall shall be placed in holes drilled in the existing box culvert.

Dowel holes shall conform to Item 5-23.

Railing Details Type A	- AR-1-57, Revised *4-2-62*
Bearing Plate Details	- CSB-2-56, Sheet 3 Revised 2-2-59
Approach Slab Details	- AS-1-54, Revised *7-5-62*

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with revisions thereof dated 2-21-58 & *5-1-62*

FOUNDATION SOUNDINGS: Foundation design and foundation quantities are based on a study of soil sampling soundings made at the site. This sounding information may be inspected in the office of the Bureau of Bridges in Columbus or in an abridged form in the Division office, but the State assumes no responsibility for the accuracy thereof.

WELDING of structural steel shall be Class "A" except as otherwise shown. Any welds shown as field welds may be, at the option of the contractor, made in the shop. Class "B" welding shown thus:

B)——↘

TRAFFIC MAINTENANCE: For maintenance of traffic and construction sequence, see Roadway Plans.

REMOVAL OF PORTIONS OF EXISTING STRUCTURE: When no longer needed to maintain traffic and after driving the pier piles, the existing box culvert shall be altered as indicated on the plans.

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete in the deck slab, the placing of concrete shall progress up grade. The slab may be placed in sections between transverse construction joints which are parallel to the transverse slab bars and are located near the center of any span.

DESIGN DATA

DESIGN LOADING - CF 400(57)

CONCRETE CLASS C - Basic unit stress 1,333 p.s.i.
CONCRETE CLASS E - Basic unit stress 1,133 p.s.i.

STRUCTURAL STEEL - ASTM A36 - basic unit stress 20,000 p.s.i.
(except piling) (ASTM A7 and A373 steel not permitted)

REINFORCING STEEL - ASTM A15, A16, A160, Deformed, Intermediate or Hard Grade. Basic unit stress 20,000 p.s.i.

MACHINE FINISH: The top of the bridge deck slab shall be machine finished in accordance with Item S-1.23.

CRUSHED AGGREGATE SLOPE PROTECTION shall be provided under the structure as indicated on the General Plan.

PILES shall be driven to firm contact with rock. If the length of penetration is approximately equal to the depth of rock according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in Sec. S-18.05 is not less than the following value for a pile hammer of the indicated energy rating:

For abutment piles:

45 tons per pile using a 15000 ft. lb. hammer.

For pier piles:

45 tons per pile using an 11000 ft. lb. hammer.
40 tons per pile using a 15000 ft. lb. hammer.

If the energy rating of the hammer is between the ratings as shown above, the required formula capacity shall be determined by interpolation. The design load is 40 tons per pile for the abutment piles and 35 tons per pile for the pier piles.

DUMPED ROCK FILTER MATERIAL: The filter material placed under the Dumped Rock Channel Protection shall be placed and paid for under Item E-4. The material shall conform to Item I-22.02.

SHOP PAINTING STEEL: The surface preparation of all steel requiring shop painting as per the Plans and Specifications shall be accomplished by blast cleaning or power tool cleaning, except as noted in the Specifications regarding the use of chromate primers.

CONTINUOUS BEAM SHOP ASSEMBLY: Reference paragraph 4, Sec. S-7.12 of the Construction and Materials Specifications, if rolled beams are field spliced only at supports, for the purpose of checking the fit-up of weld joint preparation, only two adjacent beams need be shop assembled at a time in their correct, unloaded positions. All beams shall be assembled and match marked.

GAS LINE NOTES

GENERAL
Contractor shall be responsible for all excavation, relocating of existing line as required, connections to existing line, and repairs to tape coat covering as required so as to provide complete and satisfactory pipe covering.

Contractor shall by backhoe or other means excavate cover over that portion of existing line at connection points. Extreme care shall be exercised as not to rupture or damage the line in any way.

Contractor shall excavate trench or make fill along lines and grades as shown on the plans.

Contractor shall be responsible for purging the line. The existing line shall be cut cold, relocated and connected back to the line with Dresser Couplings Style No. 38, or an approved equal.

Surfaces for welding shall be thoroughly cleaned before welding and completed welds shall be thoroughly cleaned before pipe coating is applied.

Before welding the pipe, ends shall be carefully aligned with respect to each other and shall be tack welded to preserve alignment during welding, the completed weld shall have a reinforcement extending above the exterior surface of the pipe one-sixteenth (1/16") of an inch.

The Contractor shall use only competent and skilled workmen on welding. No welding shall be done except by welders who have qualified on test welds and hold cards from a utility company testifying as to their competency.

The Contractor shall make all pipe bends in the field to conform to the profile of the grade and to the plan of the pipe line.

Where it is necessary to cut the pipe in the field, bevels must be torched out and cleaned for welding.

The Contractor shall supply all welding equipment and welding supplies, such as oxygen, acetylene, carbide and welding rods.

In order that the pipe line be laid to accurate grade, the Contractor shall furnish 4" x 4" wood blocks which are to be firmly embedded in the trench at 25 feet intervals, their upper surfaces to conform to the grades shown on the plan. After blocks are set to grade, the bottom of the trench is to be backfilled with fine loose earth to an elevation slightly above the top surface of the blocks so that the barrel of the pipe will embed itself to a bearing between the blocks.

After the line is laid, the Contractor shall furnish the labor and necessary equipment for conducting air pressure tests and dead weight leakage test at 100 pounds per sq. in. in pressure, and to repair or replace faulty or defective material or work of an inferior character. After leakage tests are satisfactorily completed, the line shall be tied into the existing line. A minimum cover of 2 feet shall be placed over the pipe,and immediately and thoroughly tamped.

The open ends of the pipe shall be securely closed at the end of each day's work to prevent entrance of small animals or the introduction of foreign matter of any nature.

At night, or when work ceases for any appreciable length of time, lighted yellow lanterns or highway flare torches spaced no more than 50 feet apart will be maintained along all open trenches.

The Contractor shall place gas line and drip identification markers after final fill has been made.

All work performed by the Contractor shall be subject to inspection by an authorized representative of the Wheeling Steel Corporation in addition to the inspection provided by the State Highway Department. Any work found defective shall be corrected at the Contractor's expense.

STEEL PIPE
Steel pipe shall be as specified for Schedule 40, Grade A, black, seamless pipe in the American Society for Testing Materials Standards A-53, A-106 or as specified for Schedule 40 Grade A, black, electric resistance welded pipe in ASTM Standard A-135. The Contractor shall have the option of furnishing pipe conforming to the requirements of any one of the above specifications.

PROTECTIVE COVERING
All straight pipe to be placed underground shall be given a protective covering mechanically applied in a factory or field plant especially equipped for that purpose. Specials and fittings which cannot be coated and wrapped mechanically, shall have the protective covering applied by hand. After the pipe has satisfactorily passed the air pressure tests, all joints shall be coated and wrapped by hand. All hand coating and wrapping shall be done in a manner and with materials which will produce a covering equal in effectiveness to that of the mechanically applied covering. All pipe to receive protective covering shall be thoroughly cleaned of all rust, scale, oil, grease and other matter which would interfere with the proper adhesion of the primer coat before any protective wrapping is applied.

The exterior protection of all underground pipe and fittings shall consist of the following coatings and coverings applied in the order of their listing below:

1. Coal-tar primer
2. Coal-tar enamel (3/32 in., +1/32 in., thick)
3. Fibrous glass mat.
4. Coal-tar enamel (1/32 in. minimum)
5. Bonded asbestos felt
6. Kraft paper

All such materials and applications shall be in accordance with AWWA Specifications C203, together with Section A1.4 of the Appendix of the Specification.

Special precautions shall be observed in handling of the pipe to prevent damage to the wrapping. Slings of belting or other suitable material shall be used.

Malleable iron fittings shall be covered with protective covering as specified for steel pipe.

SCHEDULING
The Contractor shall perform his operations in such a manner that the connections to the existing gas line may be made simultaneously at the Warrenton, Shannon Run and Tarrs Run sites. The existing gas line may be out of service for a period of time not to exceed twelve (12) consecutive hours.

NOTIFICATION
The Contractor shall notify the Wheeling Steel Corporation at least four days in advance of the time he anticipates making connections between the relocated line and the existing line.

OPERATION OF VALVES
The Contractor shall not operate existing valves. All existing valves shall be operated by representatives of the Wheeling Steel Corporation.

CASING PIPE
The casing pipe shall have a smooth shell with an outside diameter of 14 inches and a wall thickness of 1/4" and meet requirements of ASTM Specification A-139. The casing pipe shall be coated on the outside only with a bituminous material meeting the requirements of M-6.4(c). The adjoining pipe ends shall be butt welded around the entire pipe periphery. A leaded joint shall be provided between the 14" casing pipe and the 10" carrier pipe. The price bid per foot for Item I-1, 14" Steel Casing Pipe, as per plan, shall constitute full compensation for all labor, materials and equipment, all as required for excavation, installation and backfilling at locations shown on the drawings. The carrier pipe which is to be installed in the casing pipe shall be paid for separately.
If the casing pipe is placed by open trench method the backfill shall be Type I as described in Sec. I-1.07.

MALLEABLE IRON FITTINGS
Malleable iron fittings shall be as specified in the American Society for Testing Materials Standards A-47.

DRIP LEG VALVE
The drip leg valves shall be Homestead Semi-Steel Plug Valves, Not Lubricated, Fig. 601, or an approved equal.

PAYMENT
The footage of pipe to be paid for shall be the actual number of lineal feet of 10" gas line measured along the centerline of the gas line relocations and shall be paid for at the contract price bid per lineal foot for Item Special - 10" Gas Line, as per plan, which price and payment shall constitute full compensation for excavating and for furnishing, hauling and placing all material including backfill, both granular and earth, the removal of all surplus excavation and discarded material, furnishing and constructing joints and connections to existing pipes, purging, testing, wrapping and any other items necessary to perform the work as outlined above or in the plans including all materials and work necessary to construct the 10" gas line, the gas line markers, the Drip Leg complete, and the drip identification post and signs.

COVER
Where the proposed gas line is to be placed within the Temporary Connection at the Warrenton site, a minimum cover of three (3) feet shall be left over the gas line when the area is restored to it's original condition after the Temporary Connection is no longer needed for Traffic Maintenance.
