1963 SPECIFICATIONS

The standard specifications of the State of Ohio, Department of Highways, including changes and supplemental specifications listed in the proposal shall govern this improvement.

The right of way for this improvement will be provided by the State of Ohio.

I hereby approve these plans and declare that the making of this improvement will not require the closing to traffic of the highway and that provisions for the maintenance and safety of traffic will be as set forth on these plans and estimates.

GENERAL NOTES (CONT'D)

SPECIAL SEEDING PREPARATION AREAS

The references in the first paragraph of Sec. L-9-11 to preparation of the seed bed in front of residences, etc.; shall on this project, be considered particularly applicable in the following areas.

Sta. 807+95.5 to Sta. 811+50 Left & Right.

CROWN AT RAILROAD CROSSING

The crown shall be worked out of the pavement beginning 50 feet from the crossing by raising the edge of the pavement to meet the rail elevation.

GUARD RAIL ADJACENT TO BRIDGE

One (1) additional guard rail post shall be provided in the center of each panel of guard rail adjacent to the bridge, payment for which shall be included in the unit price bid for Item I-15, Guard Rail.

NOTES AND COMPUTATIONS

ALL ELEVATIONS BASED ON USGS DATUM

ROUNDING OF CORNERS SHOWN ON CROSS SECTIONS

The rounded corners shown on Standard Drawing RI-1, as modified by the typical section, applies to all cross sections, even though otherwise shown on these plans.

UTILITY ADJUSTMENT

Any or all work required for Public or Private Utilities will be done by and at the expense of their respective owners, unless otherwise noted on these plans.

UNDERGROUND UTILITIES

The locations of the underground utilities shown on the plans have been obtained by diligent field checks and searches of available records. It is believed that they are essentially correct, but the State of Ohio makes no guarantees as to their accuracy or completeness.

PRIVATE SEWER TAPS

This plan makes no provision for connecting, nor shall the Engineer or Contractor connect, any existing or new private drainage to the new highway drainage system when such private drains carry effluent or drainage from leaching bed outlets, cellar drains, or sink drains, or polluted water of any kind. Connections may be made to the existing or new highway drainage system when the water carried to the project drainage system does not come within the category outlined above. Acceptable water includes flow from roof drains, field drains and enclosed natural drainage sources which would reach the road through natural channels if such water was not conducted artifically. Existing sewer taps which do not carry acceptable water as defined above shall be plugged at the right-of-way line. Plugging specified shall be by means of Class "E" Concrete and payment therefor shall be included in the unit price bid for Item E-1, Roadway Excavation.

FIELD OFFICE

The contractor shall, in accordance with Sec. S-0.01(b), provide, for the exclusive use of the State's employees, a suitable field office having a minimum of 150 sq. ft. of floor space. The Contractor shall have a telephone installed and maintained in this field office during the construction of this project. The Contractor shall also provide and install wiring and outlets suitable for connecting electric lights and office equipment in the field office and provide 110-volt alternating current to the office during the entire period of construction of this project. This office shall be provided within 10 days after work is started on the project.

DESIGN SPEED

The geometrics for this project have been planned for a design speed of 50 miles per hour.

SEEDING

Quantities for seeding are calculated for the soil areas between the work limits, as shown on the cross sections.

SCARIFICATION OF EXISTING FLEXIBLE PAVEMENT

Within the limits of construction where the existing flexible pavement will have less than six (6) inches of fill placed upon it, the pavement shall be throughly scarified for its full depth, mixed with sufficent soil and properly recompacted to insure the elimination of any planes of separation between it and the embankment placed thereon. Payment for scarification as described above shall be included in the unit price bid for Item E-1, Roadway Excavation.

REMOVAL OF TREES AND STUMPS

All trees and stumps lying within the construction limits of this project shall be removed under the lump sum price bid for Item E-9, Removal of Trees and Stumps, except that those trees and stumps for which protection and preservation work is indicated elsewhere in these plans shall not be removed.

The following is an estimate of the number of trees and stumps to be removed.

Sizes	12"-18"	18"-24"	24"-30"	30"-36"	
Trees	6	6	1		
Stumps					

The above estimate is approximate and the State of Ohio reserves the right to order the removal of additional trees or stumps outside of the limits of construction but within the right-of-way and/or easement lines. Payment for the removal of these additional trees or stumps shall be included in the lump sum price bid for Item E-9, Removal of Trees and Stumps.

FOR ADDITIONAL NOTES SEE SHEET NO. 2.

ESTIMATED QUANTITIES

Specific location and usage of estimated quantities set up on this plan to be used "as directed by the Engineer" shall be made a matter of record by incorporation into the final change order governing completion of this project.

NON-RIGID PAVEMENT REMOVAL

Removal and disposal of existing non-rigid pavement, unless otherwise indicated on these plans, shall be measured and paid for as Item E-1, Roadway Excavation.

DRAINAGE OF BASE MATERIAL

Where the base material is drained by I-9 Stone Underdrains, the Contractor shall finish, seed, and mulch the slopes so as not to impede drainage of the base material. The actual area of the outcrop of the I-9 Stone Underdrain shall not be seeded.

PART WIDTH CONSTRUCTION

Because of the necessity of building this project under traffic and constructing the pavement part at a time, extreme care shall be taken to prevent the construction of a butt joint on centerline in the B-19 and I-22 courses.

This shall be accomplished by building the B-19 and I-22 courses, placed with the first portion of the pavement built, at least eighteen (18) inches beyond the centerline and by surfacing no closer than eighteen (18) inches to this edge of the above courses. When the second portion of the pavement is built, at least twelve (12) inches of these projecting courses shall be broken down and thoroughly keyed in with the newly placed corresponding courses in the second portion of the pavement built. Payment for this operation shall be included in the unit price bid for the pertinent pavement items.

EXCAVATION & EMBANKMENT SUMMARY

Station From	Station To	Exc. Cu. Yds.	Emb. Cu. Yds.	Emb. + 15% Cu. Yds.	L-9 SEEDING
807+29	815+45	601	3452	3970	4845 Sq. Yds.
Totals		601	3452	3970	4845 Sq. Yds.

E-11 WATER

Embankment using 5 Gals. per Cu. Yd. = 3452 Cu. Yds. × 5 ÷ 1000 = 17.26 M. Gals.
B-19 Base using 5 Gals. per Cu. Yd. = 406* Cu. Yds. × 5 ÷ 1000 = 2.04 M. Gals.
I-22 Subbase using 5 Gals. per Cu. Yd. = 388* Cu. Yds. × 5 ÷ 1000 = 1.95 M. Gals.
* From Sheet No 4
Total E-11 Water = 21.25 M. Gals.
Use 21 M. Gals.

L-9 Seeding and Protecting = 4845 Sq. Yds.
L-9 Commercial Fertilizer (12-12-12) = Pay rate 20 lbs/1000 Sq. Ft. = 4845 × 9 × 20 ÷ 1000 ÷ 2000 = 0.43 Tons
L-9 Agricultural Liming Material = Pay rate 100 lbs/1000 Sq. Ft. = 4845 × 9 × 100 ÷ 1000 ÷ 2000 = 2.17 Tons

TRAFFIC NOTES

The contractor shall maintain traffic at all times in accordance with the requirements of Item I-3. The length of one way traffic zones shall be kept to a minimum consistent with the requirements of the work. Maximum use shall be made of the existing pavement for traffic maintenance, holding the length and duration of use of temporary traffic lanes to a minimum.

Temporary traffic lanes shall be surfaced with T-10 material, treated with calcium chloride and the surface maintained daily in a manner satisfactory to the Engineer. Two way traffic lanes shall be surfaced with aggregate at least 20 feet wide and one way traffic lanes shall have the surfacing aggregate not less than 12 feet wide.

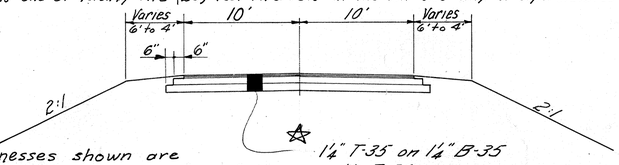
Payment for constructing, maintaining and removing traffic lanes and for all other items required for the maintenance of traffic, except furnishing and placing calcium chloride, traffic compacted surface course and temporary runaround bridge and approaches, shall be included in the lump sum bid for Maintaining Traffic, Item I-3.

T-10 MODIFIED

This item shall consist of furnishing № 3 or № 34 aggregate, when directed by the Engineer, in lieu of the grading specified under Item T-10. All other provisions of Item T-10 shall apply. The weights to be used in calculating the yardage to be paid for under this item shall be the same as those indicated in the Construction and Material Specifications for crusher run or bank run materials.

ITEM I-9 STONE UNDERDRAIN, NO. 2.

Stone Underdrains shall be placed at fifty (50) foot intervals on each side of normal crowned sections and at twenty-five (25) foot intervals on the low side only of superelevated sections.



★ Thicknesses shown are designed thicknesses as described in Sec. T-35.01 or B-35.01

1¼" T-35 on 1¼" B-35 with T-30 prime on 6" B-19 and 6" I-22

TYPICAL SECTION MAIN ST.

FEDERAL AID CONSTRUCTION IDENTIFICATION SIGNS

The Contractor shall furnish, erect, maintain and subsequently remove Federal Aid Construction Identification Signs at each of the following locations:

1. Sta. 807+60 Rt.
2. Sta. 815+50 Lt.

Sign details shall be as specified on Standard Drawing F.A.C.I. 1, "Code N-54(1)-96(2)" The signs shall be erected in accordance with Standard Drawing F.A.C.I. 2. Additional requirements shall be in accordance with notes in the Proposal.

CONSTRUCTION LAYOUT STAKES

See note in proposal describing the work included in this lump sum pay item.

SUPERSTRUCTURE NOTES

SUPERSTRUCTURE CONCRETE shall be Class C.
SLAB THICKNESS is 8¼" which includes 1" for monolithic wearing surface.
DECK SLAB HAUNCH: The haunch in the superelevated deck slab adjacent to the top of steel beams which is shown as 9" wide, may vary from this dimension between the limits of 6" and 12" on the low side and between 9" and 12" on the high side. Except on the high, the maximum slope shall not exceed 3 inches per foot. Payment for deck slab concrete shall be based on the 9" width.
DECK SLAB DEPTH: The distance shown from top of deck deck slab to top of steel beam is the nominal dimension. The quantity of deck concrete to be paid for shall be based on this dimension, even though deviation from it may be necessary because the top flange of the beam may not have the exact camber or conformation required to place it parallel to the finished grade

GENERAL NOTES

REFERENCE shall be made to following Standard Drawing CSB-1-55 Sheet 1, 2 & 8 of 8 Dated 3-1-55 Revised 2-2-59, ... Revised 2-2-59, FSB-1-62 Dated 4-19-62 Revised 1-15-63, and Supplemental Specification S-101 Dated 7-12-62, and S-307 dated 8-23-60.

DESIGN SPECIFICATIONS: This structure conforms to the requirements of "Design Specifications for Highway Structures" of the State of Ohio, Department of Highways, dated 9-1-57, together with current revisions thereof.

TEMPORARY RUN-AROUND, BRIDGE, APPROACH EMBANKMENT AND PAVEMENT: Load frequency for bridge, CF=30 with unit stresses increased 25% as per the provisions for temporary bridges in the "Design Specifications for Highway Structures". Bridge width, 22'-0". Approach width, out-to-out of shoulders, 28'-0". Approach pavement shall be Class "B", 22'-0" wide.

REMOVAL OF EXISTING STRUCTURE: When no longer needed to maintain traffic the existing structure shall be removed.

EXCAVATION QUANTITY for the abutments, in addition to that outlined in Section E-2.09 includes the removal of material bounded by the front vertical plane described in E-2.09 and by the finished slope of the cut.

PILES shall be driven to firm contact with rock. If the length of penetration is approximately equal to the depth to rock, according to the bridge foundation investigation report, the firm contact shall be considered as attained when the capacity according to the formula in Sec. S-18.05 is not less than the following value for a pile hammer of the indicated energy rating:

For the abutment piles.
- 40 tons per pile using a 7,000 ft. lb. hammer.
- 35 tons per pile using a 11,000 ft. lb. hammer.
- 30 tons per pile using a 15,000 ft. lb. or greater hammer.

For the pier piles.
- 55 tons per pile using a 7,000 ft. lb. hammer.
- 50 tons per pile using a 11,000 ft. lb. hammer.
- 45 tons per pile using a 15,000 ft. lb. or greater hammer.

If the energy rating of the hammer is between the ratings shown above, the required formula capacity shall be determined by interpolation. The design load is 22 tons per pile for the abutment piles and 31 ton per pile for the pier piles.

WELDING of structural steel shall be Class A except as otherwise shown. Welds shown as field welds may, at the option of the Contractor, be made in the shop.

REINFORCING STEEL CLEARANCE: Unless otherwise noted the clearance of reinforcing steel to the face of concrete is 2".

CONCRETE DECK PLACING: In order to facilitate water curing of the concrete of the deck slab, the placing of the concrete shall progress upgrade. The slab may be placed in sections, between transverse construction joints which are parallel to transverse reinforcing steel and are located near the center of any span.

MACHINE FINISH: At the Contractor's option, the concrete deck may be finished by use of a finishing machine.

UTILITY LINES: All expense involved in relocating the affected utility lines shall be borne by the owners. The Contractor and owners are requested to cooperate by arranging their work in such a manner that inconvenience to either will be held to minimum.

CONTINUOUS BEAM SPLICE: See Beam Splice Detail, sheet 15, for welding beams having depths differing by more than ⅛".

CONTINUOUS BEAM SHOP ASSEMBLY: Reference paragraph 4, Sec. S-7.12 of the Construction and Material Specifications, if rolled beams are field spliced only at supports, for the purpose of checking the fit-up of weld joint preparation, only two adjacent beams need be shop assembled at a time in their correct, unloaded positions. All beams shall be assembled and match marked.

Design Data

Design Loading - CF * (57). (* = 130,400 or 2000)
Concrete Class C - basic unit stress 1,333 psi.
Concrete Class E - basic unit stress 1,133 psi.
Structural Steel (Except Piling) - ASTM A36 - basic unit stress 20,000 psi. (ASTM A7 and A373 steel not permitted)
Reinforcing Steel - ASTM A15, A16, A160, Deformed, Intermediate or Hard Grade. Basic unit stress 20,000 psi. Except, spiral reinforcement may be plain, Structural Grade with basic unit stress of 18,000 psi.

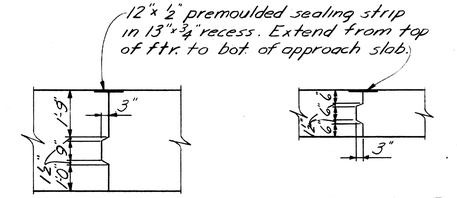
* Cut web, drill 3/8" hole at end of cut, and raise flange to match depth of adjacent beam. Prepare edges of cut and completely butt weld. Grind and radiograph weld.



CONTRACTION JOINT DETAILS

NOTES:
GENERAL NOTES see sheet # 14.
CONCRETE shall be Class E.
POROUS BACKFILL shall extend upward to the approach slab and to the surface of the earth shoulders, and outward to the surface of the embankment slopes. Excavation therefor, in excess of that required for construction of the abutment, shall be considered as paid for in the bid price per cu. yd. paid for porous backfill.
BRIDGE SEAT REINFORCING: Special care shall be taken in placing reinforcing steel in the vicinity of the bridge seat so as to avoid interference with the drilling of anchor bar holes.
SECTIONS A-A, B-B and C-C. See sheet # 16.

GENERAL NOTES: See Sheet # 14.
REFERENCE shall be made to Std. Dwg. FSB-1-62 for bearing details.
REFERENCE shall be made to Standard Dwg. CSB-1-55 for details not shown such as crossframes, end finish, welds, etc.

BEAM SPLICE WELDING PROCEDURE:
1. Raise the abutment ends of the beams ⅜".
2. Butt-weld the beam flanges and web, using the following sequence: make one pass on each flange, then two on the web; repeat, using one pass at each location, until welds are completed
3. Weld the bottom and top moment plates.
4. Lower beam ends to final position.

For BEAM SPLICE DETAIL, see sheet #15.
