Profile: Vertical 1"= 5'

The standard specifications of the State of Ohio, Department of Highways, including changes and supplemental specifications listed in the proposal shall govern this improvement.

The right of way for this improvement will be provided by the State of Ohio.

I hereby approve these plans and declare that the making of this improvement will not require the closing of the highway to traffic and that provisions for the maintenance and safety of traffic will be as set forth on the plans and estimates.

MED-I-10.09

GENERAL NOTES

GUARD RAIL POST ANCHORS:

At locations where pier footings interfere with installation of full length guard rail posts, short posts shall be provided and shall be anchored in accordance with the detail shown elsewhere in the plans. Cost of providing and installing necessary anchors shall be included in the unit price bid per lineal foot for guard rail.

GUARD RAIL PARAPET ANCHOR:

Cost of providing and installing anchor for connecting deep steel beam guard rail to bridge parapet is included in the bridge quantities for payment. Contractor shall provide one additional guard rail post in the center of the first panel of deep steel beam guard rail where anchored to the parapet, cost of which shall be included in the unit price bid per lineal foot of guard rail.

EROSION CONTROL AT BRIDGES:

Sodded channels shall be provided at ends of bridges where required by the plans. Cost of all work necessary to complete the item shall be included in the unit price bid per square yard for "Item L-10, Sodding for Special Berm and Slope Protection."

SUBGRADE COMPACTION:

The area of compacted subgrade to be paid for includes the main pavements, paved shoulders and hard surfaced cross road pavements.

STONE UNDERDRAIN NO. 2:

No.2 Stone Underdrain has been estimated for cross road drainage at 50 feet intervals on each side where I-4 drainage is not provided. They shall be placed not over 50 feet apart and staggered. This quantity is to be used in its entirety.

EROSION CONTROL AT HEADWALLS:

An 18 inch wide strip of sod shall be placed along the back and both ends of each standard headwall, Type HW-A, B, and C, to prevent erosion. The quantity of sodding required to prevent erosion at the headwalls is included in each of the culvert estimated quantities.

REPLACEMENTS:

The Contractor shall replace at his own expense any item not specifically listed for removal that is damaged or destroyed by his operations.

PLUGGING GAS WELLS:

See Note In Proposal.

CONSTRUCTION LAYOUT STAKES:

See Note In Proposal.

ITEMS L-10 SODDING, I-10 RIP RAP AND I-14 PAVED GUTTER:

These items are provided on the plans for erosion control. The Engineer shall check and make adjustments in location and quantities for these items where indicated by field conditions during construction.

L-9 COMMERCIAL FERTILIZER:

All areas to be seeded under Item L-9 or sodded under Item L-10 shall have commercial fertilizer 12-12-12, applied at the rate of twenty (20) pounds per 1,000 square feet.

SEEDING AND PROTECTING:

Quantities provided for seeding the main facility are calculated for all soil areas between right-of-way fence lines. On cross roads or other unfenced areas, seeding has been calculated for all soil areas located between the work limits, including runarounds. Seed shall be sown at the rate of 3 pounds per 1000 square feet except as otherwise noted in the plans. Seeding formula for all seeded areas shall be in accordance with the following:

70% Kentucky 31 Fescue	5% Redtop
20% Kentucky Bluegrass	5% Alsike Clover

EXISTING DRAINAGE:

It is anticipated that some existing pipe drains other than those carrying domestic waste will be intercepted and severed by the proposed roadway and channel excavations. In any such case a section of the pipe so severed will be removed to make way for the necessary excavation. If the remaining pipe flows away from the excavation and the plans do not indicate that it is to be used as an outlet, it shall be blocked effectively at its upper end in accordance with the General Notes. If the pipe flows toward the ditch excavation the tile shall be preserved and a proper new outlet provided. New tile ordered by the Engineer shall be paid for at the unit price bid for Pipe Outlets for Roadway Drainage, Item I-3. The following quantities have been set up in the General Summary to be used for the above purpose as directed by the Engineer. The quantity and location of any additional Item I-2 or I-3 Roadway Drainage shall be recorded and submitted in Final Estimate.

I-2 8" Class "A" Storm Sewer Under Pavement & Approaches M-6.5(b), M-6.8(b)-500 Lin. Ft.
I-2 12" Class "A" Storm Sewer Under Pavement & Approaches M-6.5(b), M-6.8(b)-500 Lin. Ft.
I-3 6" Pipe For Roadway Drainage — 600 Lin. Ft.
I-3 8" Pipe For Roadway Drainage — 600 Lin. Ft.
I-3 8" Pipe Outlets For Roadway Drainage M-6.4(a)-400 Lin. Ft.
I-3 12" Pipe Outlets For Roadway Drainage M-6.4(a)-400 Lin. Ft.
I-8 No. 1 Side Ditch Inlet (Modified) — 6 Required
I-3 10" Pipe For Roadway Drainage — 400 Lin. Ft.

EXISTING FLEXIBLE PAVEMENT:

Within the limits of construction where the existing flexible pavement will have less than six (6") inches of fill placed upon it, the pavement shall be thoroughly scarified for its full depth, mixed with sufficient soil and properly recompacted to insure the elimination of any plane of separation between it and the embankment placed thereon. Outside the limits of construction the existing flexible pavement shall be thoroughly scarified, mixed with sufficient soil and shaped to fit the surrounding terrain in such a manner as to insure the growth of seed planted thereon. Payment for all the above shall be included in the unit price bid for Roadway Excavation.

CENTERLINE REFERENCE MONUMENTS:

Monuments shall be constructed of Class C Concrete, cast-in-place in a circular hole, eight inches in diameter and forty-four inches in depth. Top of concrete shall be finished at a depth of two inches below ground level and the upper six inch portion of the concrete shall be formed. A 16d nail shall be embedded in the wet concrete as directed by the engineer to mark centerline and station. Monuments shall not be placed until seeding is completed.

DRAINAGE OF SUBBASE MATERIAL:

Where the subbase material is drained by I-9 Stone Underdrain or by extensions through the shoulders to the fill slope or the ditch line, the Contractor shall finish, seed and mulch the slopes so as not to impede drainage of the subbase material. The actual area of the outcrop of the subbase material or I-9 Underdrain shall not be seeded.

LINE DATA CALCULATIONS FOR APPROACHES:

Length of Work on Approaches and Run-arounds:

Medina County Highway 121
Begin work - Station 40+75
End work — Station 58+49.96
Length of work — 1774.96 Lineal feet

Guilford Township Highway 120
Begin work - Station 39+00
End work — Station 58+00
Length of work — 1900 Lineal feet

Medina County Highway 71
Begin work - Station 44+75
End work — Station 57+50
Length of work — 1275 Lineal feet

Ohio State Route 57
Begin work - Station 39+25
End work — Station 59+86
Length of work — 2061 Lineal feet

Total Length of Work on Approaches = 7010.96

I-22 UNDER APPROACH SLABS:

The area between the bottom surface of the approach slab and the subgrade shall be back filled with item I-22 subbase.

MED-1-10.09

GENERAL NOTES

ROAD NAME: SIGN:

All County, Township, City or Village road or street name signs that will be disturbed by the construction shall be carefully removed and stored by the Contractor for disposal by their respective owners. Payment for this operation shall be included in the unit price bid for Roadway Excavation.

FIELD OFFICE:

The Contractor shall provide a suitable Field Office for the exclusive use of the State Employees, in accordance with Sec. S-0.01 (b), having a minimum of 500 square feet of floor space. The Contractor shall have a telephone installed and maintained in the Field Office during the construction of this project. Contractor shall also install wiring and outlets suitable for connecting to office equipment, and provide 110 volt alternating current during the construction of this project.

SIGHT DISTANCE:

Basis for measuring sight distance shall be 4.0 feet for height of eye and zero feet for height of object. The minimum stopping sight distance on this project is 600 feet.

UTILITIES:

The Contractor shall notify at least 48 hours before breaking ground all Public Service Corporations having wire, poles, pipe, conduits, manholes or other structures that may be affected by this operation, including all structures which are affected and shown on these plans. Any and all work required for public or private utilities will be done by and at the expense of their respective owners, unless otherwise noted on these plans.

ROUNDING OF CORNERS ON CROSS SECTIONS:

The rounded corners, as shown on Standard Dwg. R1-1, apply to all cross sections unless otherwise shown on the Typical Sections.

R/W MONUMENTS, FEDERAL PROJECT MARKERS AND SECTION MARKERS:

Existing R/W Monuments, Bench Marks, Federal Project Markers and Section Markers that will be removed by construction, shall be protected by the Contractor as per Section G-7.09 until they can be witnessed, referenced and reset by the Construction Crew.

ELEVATION DATUM:

All elevations are based on U.S.G.S. datum.

LOCATION AND SIZE OF PIPES:

The location, type, depth and size of all existing pipes are shown as near exact as the available information will permit. The State will not be responsible for any variations found during construction.

UNDERGROUND UTILITIES:

The locations of the underground utilities shown on the plans have been obtained by diligent field checks and searches of available records. It is believed that they are essentially correct, but the State of Ohio makes no guarantees as to their accuracy or completeness

REMOVAL OF TREES AND STUMPS:

The number and size of trees and stumps shown below for removal under the construction as detailed on these plans, are as nearly correct as available information permits. The State of Ohio will not be responsible for any variations found during construction. The lump sum bid for Item E-9, Removal of Trees and Stumps, shall constitute full payment for this item, and no additional compensation will be allowed. All trees and stumps within the limits of the limited access right of way on the main line and the work limits on the crossroads and channel improvement shall be removed unless otherwise directed by the Engineer.

The number and size of trees and stumps are estimated below:

12" To 18" - 937 Trees	24" To 30" - 30 Trees
18" To 24" - 222 Trees	30" To 42" - 18 Trees

FLARING GUARD RAIL AT BRIDGES:

Guard rail on cross roads shall be flared to meet the bridge railing in such a manner that the change in alignment of the guard rail shall not exceed 1:20.

I-22 SUBBASE GRADING A AND B AS PER PLAN:

Material for this item shall meet the requirements for Item I-22 grading A or B, except that for both gradings the percent passing the No. 200 sieve shall not exceed ten.

SPECIAL DITCHES:

For special ditch grades, see Cross Sections.

TILE FOR SUBGRADE DRAINAGE:

10 lin. ft. of 8" Corrugated Metal Pipe, Sec. M.6.4 (a), shall be furnished and placed by the contractor, in manholes, catch basins and inlets for each subgrade drain, where, and as directed by the Engineer. Payment for each shall be made at the price bid per lineal foot of Pipe Underdrain Outlets.

PIPE:

When bell and spigot pipe is used, any necessary pipe cut-offs will be made at the spigot end of the length of pipe adjacent to the end length. When tongue and groove pipe is used the length of pipe next to the end length shall be cut and butt joint formed with a collar 12" larger than the outside diameter and 12" in length. The cost of the joint and collar shall be included in the Contract Unit Price bid for the pertinent pipe item.

DESIGN SPEED

The geometrics for this project have been planned for a design speed of 70 miles per hour.

EXISTING WATER WELLS

Dug wells encountered within the work limits shall be filled with rock or granular material. Drilled well casing shall be removed to an elevation approximately three feet below finished grade and covered with a pre-cast concrete slab or a large rock. Prior to construction of embankment contractor shall remove any masonry surrounding a well, within three feet of finished grade. Pumps and other appurtenances shall become the property of the contractor and shall be disposed of by him. The cost of filling or capping of wells shall be included in the unit price bid per cubic yard of Roadway Excavation, Item E-101, for payment.

REMOVAL OF EXISTING HOUSE DRAINS:

The removal of all existing house connections, which includes sanitary, yard, roof, basement or other similar pipe drains within the roadway construction limits shall be classified and paid for as Roadway Excavation, unless otherwise itemized for payment in the plans.

PIPE CONNECTIONS:

Longitudinal pipe lines, where connected to pipe culverts, shall be jointed to culvert pipe specials, Item I-5. The pipe special spur and the initial eight foot length of longitudinal pipe shall be of the same kind and class of pipe as used in the pipe culvert and shall be jointed by means of 6" x 24" concrete collar or metal band. The initial eight feet of longitudinal pipe shall be manufactured as a single unit, with the exception of rigid pipes 18 inches in diameter and smaller, in which case two 4 foot lengths may be shop jointed by means of a reinforced concrete collar strong enough to resist separation of the joint because of backfill loading. All additional cost of providing the culvert pipe and collars in the initial section of the longitudinal pipe shall be included in the unit price bid for the pipe special.

PLUGGING PIPE ENDS:

The upstream ends of pipe lines or tile lines intercepted by earthwork operations shall be effectively blocked and covered. Broken pieces and portions of pipe or tile shall be removed until a whole length is encountered, which shall be blocked with concrete, flat stone or brick laid in mortar, precast clay or concrete stopper. Payment for the above work shall be included in the price bid for Road Excavation.

HEAVY EQUIPMENT:

The Contractor shall exercise care in the use of heavy equipment over finished work and will be required to remove and replace any completed work destroyed thereby. Culverts shall be backfilled to a height of four feet before loaded earth-moving equipment is permitted to cross the trench. Heavy equipment shall not be operated over any completed layer of embankment, compacted subgrade or sub-base if such operation tends to destroy the soil structure or pipe underdrains; however if such operation cannot be avoided, the Contractor will be required to reduce the size of loads to an extent that damage does not occur.

SUBGRADE COMPACTION FOR DRIVES AND MAIL BOX TURNOUTS:

The subgrade under B-119 or T-70 Material used on drives and mail box turnouts shall be compacted for a depth of six inches (6") to the density requirements of Table III in Item E-1. Payment for subgrade compaction as specified above, shall be included in the unit price bid for Roadway Excavation.

EXCAVATION FOR ITEM B-119:

Excavation for B-119 material used on Side Road Approaches, Mail Box Turnouts and Drives has been included in Earthwork Quantities when same is in "Cut." Where side approaches, mail box turnouts, and drives are in "Fill", excavation for B-119 material shall be made by the contracter at his own expense if he builds the embankment up to finish grade before placing the B-119 material.

NON-RIGID PAVEMENT REMOVAL:

Cost of removing non-rigid pavement is to be included with the price bid for Roadway Excavation.

REMOVAL OF BUILDINGS

Where the plan shows a structure to be removed under Item S-24, the entire building within and without the Right-of-Way shall be removed to ground level and the basement filled.

R.A.Cox

GENERAL NOTES

FED. RD.	STATE	PROJECT	
2	OHIO	I-1105(25)	

10
189

MED-1-10.09

MAINTAINING TRAFFIC:

Medina County Highway 121

Two way traffic shall be maintained on County Highway 121 during construction of the bridge and approaches. A temporary runaround with a traffic compacted surface course has been provided for this purpose. The runaround shall be removed in accordance with Item S-15, Temporary Runaround.

The temporary runaround will be built to the lines and grades shown on the plans.

Cost of the above, except for furnishing and placing of traffic compacted surface course and chloride, shall be included in Item S-15, Lump Sum, Temporary Runaround.

Estimated Quantities

S-15	Furnishing and Placing Aggregate for Traffic Bound Surface Course	2027 CU. YDS.
S-15	Furnishing and Placing Calcium Chloride or Calcium Magnesium Chloride	40.5 TONS
S-15	Temporary Runaround Road	

Guilford Township Highway 120

Guilford Township Highway 120 shall be closed to traffic during construction of the Bridges & Approaches. The Contractor shall build & maintain Barricades, red lights & Danger signals in accordance with Section G-7.07 of the construction & material specifications and special provisions set forth on Sheet 2.

Medina County Highway 71

Medina County Highway 71 shall be closed to traffic during construction of the Bridges & Approaches. The Contractor shall build & maintain Barricades, red lights & Danger signals in accordance with Section G-7.07 of the construction & material specifications and special provisions set forth on Sheet 2.

MAINTAINING TRAFFIC: (cont.)

Traffic on State Route 57

Two way traffic shall be maintained on State Route 57 during construction of the bridge and approaches. A temporary runaround (Class-B) has been provided for this purpose. The runaround shall be removed in accordance with Item S-15, Temporary Runaround (Class-B).

The temporary runaround will be built to the lines and grades shown on the plans.

Cost of the above shall be included in Item S-15, Lump Sum, Temporary Runaround (ClassB).

MAINTAINING LOCAL TRAFFIC:

The following quantities are included for maintaining local traffic.

T-10	Traffic Compacted Surface Course	300 CY
M-10	Calcium Chloride	6 Ton

SUB-BASE DEPTH:

The Engineer may require the contractor to construct the subbase to a thickness twelve inches greater than normal through areas of frost susceptible silt soils, if encountered in the normal subgrade. In this instance, the contractor should not excavate below normal subgrade until so directed by the Engineer.

PART WIDTH CONSTRUCTION:

Because of the necessity of building certain cross roads under traffic and constructing the pavement part at a time, extreme care shall be taken to prevent the construction of a butt joint on centerline in the base and subbase courses.

This shall be accomplished by building the base and subbase courses, placed with the first portion of the pavement built at least eighteen inches (18") beyond the centerline and by surfacing no closer than eighteen inches (18") to the edge of the above courses. When the second portion of the pavement is built, at least twelve inches (12") of these projecting courses shall be broken down and thoroughly keyed in with the newly placed corresponding courses in the second portion of the pavement. Payment for this operation shall be included in the unit prices bid for the pertinent pavement items.

DRAINING PONDS:

The following ponds shall be drained by the contractor:

Stations 695+00 to 695+60

Station 673+00 on S.R.-1 to Station 55+20 on C.H.-120

The dikes shall be opened in a manner that downstream property owners will not be damaged. After the ponds have been drained, the contractor shall level the dikes to blend with the adjacent terrains and to permit free drainage. Cost of all the above shall be included in the price bid for Item E-101, Roadway Excavation.

GENERAL NOTES

WELDED STEEL: THE STEEL FOR THE 51" GIRDER SHALL CONFORM TO A.S.T.M. DESIGNATION A-373. ALL OTHER STRUCTURAL STEEL SHALL CONFORM TO EITHER A.S.T.M. A-7 (AS PER SEC. M-74 (a) OF THE CONSTRUCTION AND MATERIAL SPECIFICATIONS) OR TO A-373

EXCAVATION QUANTITY INCLUDES THE REMOVAL OF FILL MATERIAL BETWEEN THE SURFACE OF THE PROPOSED EMBANKMENT AND THE BOTTOM OF ABUTMENT.

SLOPE FACING: ONE FOOT DEEP EXTENDING FROM FACE OF ABUTMENT TO TOE OF SLOPE SHALL BE PROVIDED AT EACH ABUTMENT FOR FULL WIDTH OF BRIDGE PLUS THREE FEET ON EACH SIDE OF BRIDGE AND PARALLEL WITH ℄ OF SUPERSTRUCTURE

ALL REINFORCING STEEL TO HAVE A 2" MIN. COVER EXCEPT WHERE OTHERWISE NOTED.

ALL PILES TO BE 12" MIN. TOP DIA. CAST IN PLACE IN CONCRETE.

SPECIAL CARE SHALL BE TAKEN IN PLACING REINFORCING STEEL IN THE CENTER PIER CAP SO THAT IT WILL NOT INTERFERE WITH THE BEARING PLATE ANCHOR BOLTS.

SPIRAL REINFORCING NOTES

FOUR STEEL CHANNEL, TEE, OR ANGLE SPACERS WEIGHING APPROXIMATELY 0.68 LB. PER LIN. FT. OF SPACER, SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE EQUALLY SPACED ALONG THE PERIPHERY OF THE COIL. THE WEIGHT OF THESE SPACERS WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY OF SPIRAL BARS.

THE LENGTH SHOWN IN SCHEDULE FOR SPIRAL BARS IS THE DISTANCE FROM THE TOP OF THE FOOTING TO BOTTOM OF PIER CAP.

THE No. OF TURNS SHOWN IN THE SCHEDULE FOR SPIRAL BARS IS THE LENGTH DIVIDED BY THE PITCH PLUS THREE TURNS (TOTAL NUMBER OF CLOSED COILS.) EXPRESSED AS THE NEAREST WHOLE NUMBER.

SPIRAL REINFORCING BARS SHALL NOT HAVE DEFORMATIONS BUT SHALL IN OTHER RESPECTS CONFORM TO ITEM S-4 (REINFORCING STEEL).

1½ CLOSED COILS SHALL BE PROVIDED AT THE END OF EACH SPIRAL UNIT.

BAR SIZE IS INDICATED IN THE BAR MARK, THE FIRST DIGIT INDICATES THE BAR SIZE NUMBER. FOR EXAMPLE: S-401 IS A No. 4 SIZE BAR.

REPLACEMENT BARS: IF REINFORCING BARS ARE FABRICATED FROM STOCK WHICH HAS PREVIOUSLY BEEN TESTED AND APPROVED BY THE OHIO HIGHWAY TESTING LABORATORY, TEST SAMPLES AS PROVIDED IN SEC. S-4.02 NEED NOT BE FURNISHED AND REPLACEMENT BARS WILL NOT BE REQUIRED.

PLAN

ELEVATION

WELDED STEEL: THE STEEL FOR THE 36" WF BEAMS SHALL CONFORM TO A.S.T.M. DESIGNATION A-373. ALL OTHER STRUCTURAL STEEL SHALL CONFORM TO EITHER A.S.T.M. A-7 (AS PER SEC. N-7.4(6)) OF THE CONSTRUCTION AND MATERIAL SPECIFICATIONS) OR TO A-373.

SLOPE FACING: ONE FOOT DEEP EXTENDING FROM FACE OF ABUTMENT TO TOE OF SLOPE SHALL BE PROVIDED AT EACH ABUTMENT FOR FULL WIDTH OF BRIDGE PLUS THREE FEET ON EACH SIDE OF BRIDGE AND PARALLEL WITH ℄ OF SUPERSTRUCTURE.

WELDING OF STRUCTURAL STEEL SHALL BE CLASS "A" EXCEPT AS OTHERWISE SHOWN. ANY WELDS SHOWN AS FIELD WELDS MAY, AT THE OPTION OF THE CONTRACTOR, BE MADE IN THE SHOP.

DESIGN SPECIFICATIONS: THIS STRUCTURE CONFORMS TO THE REQUIRMENTS OF "DESIGN SPECIFICATIONS FOR HIGHWAY STRUCTURES" OF THE STATE OF OHIO, DEPARTMENT OF HIGHWAYS, DATED 9-1-57.

REFERENCE SHALL BE MADE TO STANDARD DRAWINGS RB-1-55 DATED 3-1-55, AR-1-57 DATED 4-9-57, CSB-2-56 SHTS. 2 & 3, DATED 12-3-56 AND TO SUPPLEMENTAL SPECIFICATIONS S-114 DATED 8-30-55.
SEE SHEET 175 THIS SET FOR ADDITIONAL DETAILS.

PLAN

NOTES

ALL REINFORCING STEEL TO HAVE A 2" MIN. COVER EXCEPT WHERE OTHERWISE NOTED.

ALL PILES TO BE 12" MIN. TOP DIA. CAST-IN-PLACE CONCRETE

CARE MUST BE TAKEN IN PLACING REINFORCING STEEL IN ORDER TO CLEAR ANCHOR BOLTS WHERE THEY OCCUR.

NOTES

1. Slab Thickness Shown Includes ¾" Monolithic Wearing Surface.
2. Welding Procedure:
   Lift End Of Beam 4 At E. or W. Piers Make Welded Splice At Center Pier Then Lower Ends Of Beam Into Place At E. or W. Piers. Next Lift Ends Of Beams 1 & 2 At Abutments, Make Welded Splice At E. & W. Piers And Lower Ends Of Beams Into Place.
   Butt-Weld Beam Flanges And Web At Pier Indicated Using The Following Sequence: Make One Pass On Each Flange, Then One On The Web; Repeat Until Welds Are Completed, Weld Top & Bottom Moment Plates.
3. Welding Of Structural Steel Shall Be Class "A" Except As Otherwise Shown. Any Welds Shown As Field Welds May, At The Option Of The Contractor Be Made In The Shop.

SPIRAL REINFORCING NOTES

FOUR STEEL CHANNEL TEES OR ANGLE SPACERS, WEIGHING APPROXIMATELY 0.68 LBS. PER LIN. FT. OF SPACER SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE EQUALLY SPACED ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF THESE SPACERS BASED ON 0.68 LBS. PER LIN. FT. WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY OF SPIRAL BARS.

THE LENGTH SHOWN IN SCHEDULE FOR SPIRAL BARS IS THE DISTANCE FROM THE TOP OF THE FOOTING TO BOTTOM OF PIER CAP.

THE NO OF TURNS SHOWN IN SCHEDULE FOR SPIRAL BARS IS THE LENGTH DIVIDED BY THE PITCH PLUS THREE TURNS (TOTAL NO OF CLOSED COILS) EXPRESSED AS THE NEAREST WHOLE NO.

SPIRAL REINFORCING BARS SHALL NOT HAVE DEFORMATIONS BUT SHALL IN OTHER RESPECTS CONFORM TO ITEM S-4 (REINFORCING STEEL)

½ CLOSED COILS SHALL BE PROVIDED AT THE END OF EACH SPIRAL UNIT.

BAR SIZE IS INDICATED IN THE BAR MARK, THE FIRST DIGIT INDICATES THE BAR SIZE NUMBER.

FOR EXAMPLE P-901 IS A NO 9 SIZE BAR.

REPLACEMENT BARS: IF REINFORCING BARS ARE FABRICATED FROM STOCK WHICH HAS PREVIOUSLY BEEN TESTED AND APPROVED BY THE OHIO HIGHWAY TESTING LABORATORY, TEST SAMPLES AS PROVIDED IN SEC. S-4.02 NEED NOT BE FURNISHED AND REPLACEMENT BARS WILL NOT BE REQUIRED.

General Notes

WELDED STEEL: THE STEEL FOR THE 36"WF BEAMS SHALL CONFORM TO A.S.T.M. DESIGNATION A-373. ALL OTHER STRUCTURAL STEEL SHALL CONFORM TO EITHER A.S.T.M. A-7 (AS PER SEC. M.7.4(a) OF THE CONSTRUCTION AND MATERIAL SPECIFICATIONS) OR TO A-373

DESIGN SPECIFICATION: THIS STRUCTURE CONFORMS TO THE REQUIREMENTS OF "DESIGN SPECIFICATIONS FOR HIGHWAY STRUCTURES" OF THE STATE OF OHIO, DEPARTMENT OF HIGHWAYS DATED 9-1-57

SLOPE FACING: ONE FOOT DEEP EXTENDING FROM FACE OF ABUTMENT TO TOE OF SLOPE SHALL BE PROVIDED AT EACH ABUTMENT FOR FULL WIDTH OF BRIDGE PLUS THREE FEET ON EACH SIDE OF BRIDGE AND PARALLEL WITH ℄ OF SUPERSTRUCTURE.

EXCAVATION QUANTITIES: INCLUDES THE REMOVAL OF FILL MATERIAL BETWEEN THE SURFACE OF THE PROPOSED EMBANKMENT AND THE BOTTOM OF ABUTMENT.

ALL PILES TO BE 12" MIN. TOP DIAMETER CAST IN PLACE CONCRETE PILES DRIVEN TO A MINIMUM BEARING CAPACITY OF 40 TONS.

NOTES

1. IN ORDER TO FACILITATE WATER CURING OF THE CONCRETE OF THE DECK SLAB, THE PLACING OF CONCRETE SHALL PROGRESS UPGRADE. THE SLABS MAY BE PLACED IN SECTIONS, BETWEEN TRANSVERSE CONSTRUCTION JOINTS WHICH ARE NORMAL TO THE CENTERLINE OF BRIDGE AND ARE LOCATED NEAR THE CENTER OF ANY SPAN.
2. SLAB THICKNESS SHOWN INCLUDES ¾" MONOLITHIC WEARING SURFACE.
3. WELDING PROCEDURE: LIFT END OF BEAM 1⅛" AT E. OR W. PIERS MAKE WELDED SPLICE AT CENTER PIER THEN LOWER ENDS OF BEAMS INTO PLACE AT E. OR W. PIERS. NEXT LIFT ENDS OF BEAMS 1½" AT ABUTMENTS MAKE WELDED SPLICE AT E. & W. PIERS AND LOWER ENDS OF BEAMS INTO PLACE. BUTT WELD BEAM FLANGES AND WEB AT PIER INDICATED USING THE FOLLOWING SEQUENCE: MAKE ONE PASS ON EACH FLANGE, THEN ONE ON THE WEB. REPEAT UNTIL WELDS ARE COMPLETED. WELD TOP AND BOTTOM FLANGE MOMENT PLATES
4. WELDING OF STRUCTURAL STEEL SHALL BE CLASS "A" EXCEPT AS OTHERWISE SHOWN ANY WELDS SHOWN AS FIELD WELDS, MAY AT THE OPTION OF THE CONTRACTOR, BE MADE IN THE SHOP.

SPIRAL REINFORCING NOTES

FOUR STEEL CHANNEL, TEE OR ANGLE SPACERS WEIGHING APPROXIMATELY 0.68 LBS PER LIN. FT. OF SPACER, SHALL BE PROVIDED FOR EACH SPIRAL UNIT. THEY SHALL BE EQUALLY SPACED ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF THESE SPACERS BASED ON 0.68 LBS PER LIN. FT. WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY OF SPIRAL BARS.

THE LENGTH SHOWN IN SCHEDULE FOR SPIRAL BARS IS THE DISTANCE FROM THE TOP OF THE FOOTING TO THE BOTTOM OF THE PIER CAP.

THE NO. OF TURNS SHOWN IN SCHEDULE FOR SPIRAL BARS IS THE LENGTH DIVIDED BY THE PITCH PLUS THREE TURNS (TOTAL NO OF CLOSED COILS) EXPRESSED AS THE NEAREST WHOLE NUMBER.

SPIRAL REINFORCING BARS SHALL NOT HAVE DEFORMATIONS BUT SHALL IN OTHER RESPECTS CONFORM TO ITEM S-4 (REINFORCING STEEL)

1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH SPIRAL UNIT.

BAR SIZE IS INDICATED IN THE BAR MARK, THE FIRST DIGIT, WHERE 3 DIGITS ARE USED - INDICATES THE BAR SIZE NUMBER FOR EXAMPLE P-907 IS A No 9 SIZE BAR.

General Notes

WELDED STEEL: THE STEEL FOR THE 51' BUILT UP GIRDERS SHALL CONFORM TO A.S.T.M. DESIGNATION A-373, ALL OTHER STEEL SHALL CONFORM TO EITHER A.S.T.M. A-7 (AS PER SEC.-M-74(a) OF THE CONSTRUCTION AND MATERIAL SPECIFICATIONS) OR TO A-373.

DESIGN SPECIFICATIONS: THIS STRUCTURE CONFORMS TO THE REQUIREMENTS OF "DESIGN SPECIFICATIONS FOR HIGHWAY STRUCTURES" OF THE STATE OF OHIO, DEPARTMENT OF HIGHWAYS - DATED 10/1/57

EXCAVATION QUANTITY INCLUDES THE REMOVAL OF FILL MATERIAL BETWEEN THE SURFACE OF THE PROPOSED EMBANKMENT AND THE BOTTOM OF THE ABUTMENTS. BACKFILL BEHIND THE ABUTMENTS SHALL BE MADE WITH MATERIAL MEETING THE REQUIREMENTS OF SEC.-I-22 AND SHALL BE COMPACTED IN ACCORDANCE WITH REQUIREMENTS FOR EMBANKMENT COMPACTION. PAYMENT FOR BACKFILL SHALL BE INCLUDED WITH ITEM E-2 UNCLASSIFIED EXCAVATION.

ALL PILES TO BE 12" BP 53 STEEL PILES DRIVEN TO A MINIMUM BEARING CAPACITY OF FORTY (40) TONS.

SLOPE FACING ONE (1) FOOT IN DEPTH EXTENDING FROM FACE OF ABUTMENT FOR FULL WIDTH OF BRIDGE PLUS THREE (3) FEET ON EACH SIDE OF BRIDGE AND PARALLEL WITH ℄ OF SUPERSTRUCTURE.

REFERENCE SHALL BE MADE TO STANDARD DRAWINGS BP-1-55 DATED 3-1-55, AR-1-57 DATED 4-9-57, CSBP-2-56 SHEETS 2 & 3 DATED 12-3-56 AND TO SUPPLEMENTAL SPECIFICATIONS S-114 DATED 8-20-55.
SEE DRAWING "175 FOR STANDARD DETAILS THIS SET.

WELDING OF STRUCTURAL STEEL SHALL BE CLASS "A" EXCEPT AS OTHERWISE SHOWN. ANY WELDS SHOWN AS FIELD WELDS MAY AT THE OPTION OF THE CONTRACTOR, BE MADE IN THE SHOP.

Piles To Rock Note:

PILES SHALL BE DRIVEN TO FIRM CONTACT WITH ROCK. IF THE LENGTH OF PENETRATION IS APPROXIMATELY EQUAL TO THE DEPTH TO ROCK ACCORDING TO THE BRIDGE FOUNDATION INVESTIGATION REPORT, THE FIRM CONTACT SHALL BE CONSIDERED AS ATTAINED WHEN THE CAPACITY ACCORDING TO THE FORMULA IN SEC. S-18.05 IS NOT LESS THAN THE FOLLOWING VALUE FOR A PILE HAMMER OF THE INDICATED ENERGY RATING:

FOR ABUTMENT PILES:
45 TONS PER PILE USING A 11,000 FT. LB. HAMMER.
45 " " " " " 15,000 " " "
FOR PIER PILES:
45 TONS PER PILE USING A 11,000 FT. LB. HAMMER
45 " " " " " 15,000 " " "

THE DESIGN LOAD IS 40 TONS PER PILE FOR THE ABUTMENT PILES AND 35 TONS PER PILE FOR THE PIER PILES.

THE CONCRETE IN THE ABUTMENT BACKWALL SHALL NOT BE PLACED UNTIL AFTER THE STEEL WORK IS ERECTED, BUT SHALL BE PLACED BEFORE THE DECK SLAB CONCRETE IS PLACED

EMBANKMENT: THE EMBANKMENT SHALL BE PLACED AND COMPACTED UP TO THE FINISHED SPILL-THRU SLOPE AND TO THE LEVEL OF THE SUBGRADE FOR A DISTANCE OF 100 FT. BACK OF THE ABUTMENTS, AFTER WHICH EXCAVATION SHALL BE MADE FOR THE ABUTMENTS.

THERE SHALL BE A MINIMUM TIME LAPSE OF 5 MONTHS BETWEEN PLACING OF EMBANKMENT AND BEGINNING OF ABUTMENT CONSTRUCTION.

SPIRAL REINFORCING NOTES

FOUR STEEL CHANNEL, TEE OR ANGLE SPACERS, WEIGHING APPROXIMATELY 0.68 LBS. PER. LIN. FT. OF SPACER, SHALL BE PROVIDED FOR EACH SPIRAL UNIT THEY SHALL BE EQUALLY SPACED ALONG THE PERIPHERY OF THE COIL. THE NUMBER OF POUNDS OF THESE SPACE SPACERS BASED ON 0.68 LBS. PER LIN. FT. WILL BE PAID FOR AS REINFORCING STEEL AND IS INCLUDED IN THE TABULATED QUANTITY OF SPIRAL BARS.

THE LENGTH SHOWN IN SCHEDULE FOR SPIRAL BARS IS THE DISTANCE FROM THE TOP OF THE FOOTING TO THE BOTTOM OF PIER CAP.

THE NUMBER OF TURNS SHOWN IN THE SCHEDULE FOR SPIRAL BARS IS THE LENGTH DIVIDED BY THE PITCH PLUS THREE TURNS (TOTAL NO OF CLOSED COILS) EXPRESSED AS THE NEAREST WHOLE NUMBER.

SPIRAL REINFORCING BARS SHALL NOT HAVE DEFORMATIONS BUT SHALL IN OTHER RESPECTS CONFORM TO ITEM S-4 (REINFORCING STEEL)

1½ CLOSED COILS SHALL BE PROVIDED AT THE ENDS OF EACH SPIRAL UNIT.

BAR SIZE IS INDICATED IN THE BAR MARK. THE FIRST DIGIT, WHERE 3 DIGITS ARE USED AND THE FIRST 2 DIGITS WHERE 4 ARE USED, INDICATES THE BAR SIZE NUMBER FOR EXAMPLE: S-701 IS A NUMBER 7 SIZE BAR AND P-1101 IS A NUMBER 11 SIZE BAR.

REPLACEMENT BARS: IF REINFORCING BARS ARE FABRICATED FROM STOCK WHICH HAS PREVIOUSLY BEEN TESTED AND APPROVED BY THE OHIO HIGHWAY TESTING LABORATORY, TEST SAMPLES AS PROVIDED IN SEC. S-4.02 NEED NOT BE FURNISHED AND REPLACEMENT BARS WILL NOT BE REQUIRED.

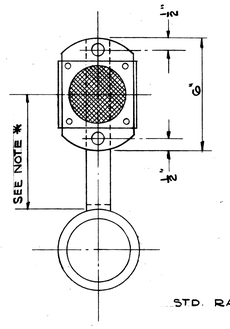
SECTION B-B

SECTION D-D
(FOR SQUARED BRIDGES)

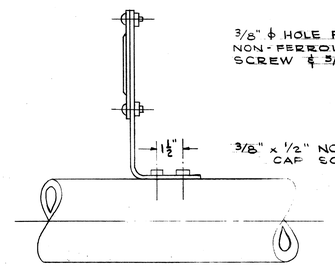
EXPANSION JT. DETAILS

NOTE *:
LENGTH OF STEEL SUPPORT SHALL BE SUCH THAT THE CENTER OF THE DELINEATOR WILL BE 45" ABOVE THE ELEVATION OF A POINT IN THE BRIDGE DECK LOCATED 12" FROM THE FACE OF THE PARAPET

1/4" x 1 1/4" STAINLESS STEEL SUPPORT



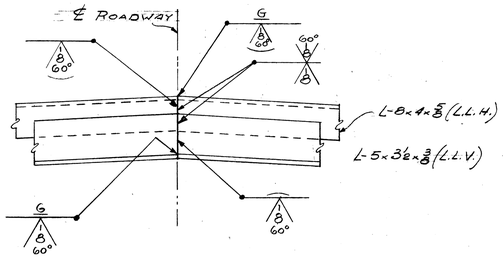
STD. RAILING



DELINEATOR AND BRIDGE RAIL BRACKET DETAIL

A Welded Butt Joint In The End Finish Along The Centerline of Roadway Will Be Required For That Portion of The End Finish Attached To The Superstructure. The Portion Attached To The Backwall Shall Be Placed In Segments Not Less Than 6'-0" In Length With One of The Joints At The Apex of The Crown. These Shall Be Closely Butted But Shall Not Be Welded.
Omit Shop Coat On All Potions of End Finish. Portions In Contact With Steel Or With Concrete Shall Not Be Painted. All Other Portions Shall Be Cleaned And Given The Shop Coat In The Field As Well As The Two Field Coats.

SECTION A-A



WELDED BUTT JOINT IN SUPERSTRUCTURE END FINISH ANGLES AT ℄ OF ROADWAY
