1975 SPECIFICATIONS

The standard specifications of the State of Ohio, Department of Transportation, including changes and supplemental specifications listed in the proposal shall govern this improvement.

The right of way for this improvement will be provided by the State of Ohio.

I hereby approve these plans and declare that the making of this improvement will require the closing to traffic of the highway and that detours will be provided as indicated on the plans.

GENERAL NOTES

PUBLIC SAFETY

No hazard shall be left unprotected except for the actual time necessary to remove, grade and reinstall guard rail in a continous operation. the removal of all guard rail shall at all times be as directed by the Engineer. No guard shall be removed untel the replacement material is on the site, ready for installation. Failure to comply with this requirment shall be deemed sufficient to order work suspended on this project untel such time that the Engineer is assured of said compliance.

GUARDRAIL AND BARRIER RAIL REMOVED

Guardrail and Barrier rail designated for removal on this project shall be carefully dismantled and the rail elements stored for either re-use elsewhere on the project or removal by state forces. All posts, blocks, and bolts, and miscellaneous hardware shall be disposed of by the Contractor. All post holes shall be carefully filled and tamped and the site cleaned and restored.

The restoration will include grading of the shoulder in the area of the guardrail removal to provide proper drainage and traversable shoulder slopes where traffic or weather may have built a ridge of earth and debris under the guardrail. The graded or disturbed area shall be reseeded, except where new guardrail 3' wide, measured from one foot in front of the rail (or centered under guardrail, Barrier Design) shall not be seeded.

Payment for all of the above shall be at the unit price bid for 202 Guard-Rail Removed For Re-Use Or Storage or 202 Barrier Rail Removed For Re-Use Or Storage, measured by the Linear foot center to center or terminal posts or center of bridge connection splices.

GUARDRAIL, TYPE 5, AS PER PLAN

Rail elements salvaged under 202 GuardRail Removed For Re-Use Or Storage on this project may be used in lieu furnishing new rail elements for 606 Guard Rail, Type 5, As Per Plan or 606 Guard Rail, Type 5, Barrier Design, As Per Plan. If salvaged rail is used, it must be renovated prior to installation and new splice bolts furnished.

Painted rail elements shall be dismantled and all paint, rust, dirt, and other foreign material detrimental to galvanizing shall be removed from rails before galvanizing. Slotted holes for intermediate post bolts shall be punched where required for Type 5, installations. The rail shall then be galvanized in accordance with 710.06. Prior to the award of the contract, the successful bidder will be required to submit an outline of the plant operations for performing the galvanizing, which shall include information on the plant capacity and storage facilities for the articles as delivered for galvanizing and storage facilities for the articles after the work is completed. This outline, when approved by the Department, will become a part of the contract.

The Contractor shall notify the Engineer at least 72 hours in advance of galvanizing any lot of articles in order that arrangements may be made to have the department inspector at the plant when the work is in progress. The inspector shall have free entry, at all times while work on the contract is being performed, to all parts of the plant that concern the cleaning and galvanizing of the articles. The Contractor shall afford the inspector all reasonable facilities without charge. To satisfy him that the work is being performed in accordance with these specifications.

Existing galvanized rail elements shall be cleaned of rust, dirt, or other foreign materials. Intermediate post bolt slots (¾"x2½") shall be field punched or drilled. Areas on which the shelter coating has been damaged and intermediate holes shall be regalvanized in accordance with AASHO M36-73I Section 23 or they may be repaired under the direction of the Engineer with stick-form galvanizing repair compound meeting the requirements of FS50-G-93.

Payment for all of the above shall be included in the unit price bid for 606 Guard Rail, Type 5, As Per Plan or 606 Guard Rail, Type 5, Barrier Design, As Per Plan.

LOCATIONS OF GUARDRAIL

The locations of guardrail runs as shown in these plans are subject to adjustment to assure that the planned installations will afford maximum protection for traffic.

GUARD RAIL OVER CULVERTS

When sufficient post depth is not available due to a culvert, the guardrail posts directly over the culvert shall not be driven but set in holes. If the distance between the ground line and the top of the culvert is less than 3 ft., the post shall be encased in a minimum of 4" thickness of Class "C" concrete for the full depth of the post. Payment for the above shall be included in the unit price bid for Item 606, Guard Rail Type 5.

TRENCH FOR WIDENING

Trench excavation for base widening shall be performed only on one side of the pavement at a time. The open trench shall be adequately maintained and protected with drums, or barricades at all times. Placement of proposed subbase and base material shall follow as closely as possible behind the excavation operations. The length of widening trench which is open at any one time shall be held to a minimum and shall at all times be subject to approval of the Engineer.

UNDERGROUND UTILITIES

The locations of the underground utilities shown on the plans have been obtained by diligent field checks and searches of available records. It is believed that they are essentially correct, but the State of Ohio does not guarantee their accuracy or completeness.

FIELD OFFICE

The Contractor shall provide a suitable field office having a minimum of 400 sq. ft. of floor space and in addition to the requirements of Item 619, he shall provide and maintain sanitory provisions as per 107.06. All the above is included in the lump sum price bid for Item 619, Field Office.

ROUNDING OF CORNERS SHOWN ON THE CROSS SECTIONS

The rounded corners shown on the typical sections, apply to all cross sections even though otherwise shown on these plans.

ESTIMATED QUANTITIES

Specific locations and usage of estimated quantities set up on this plan to be used "as directed by the Engineer" shall be made a matter of record by incorporation into the final change order governing completion of this project. Estimated quantities of materials shall not be ordered for delivery to the project unless authorized by the Engineer.

MAINTRAINING TRAFFIC

The following quantities have been provided for the maintenance of traffic as directed by the Engineer:

		URBAN	INTERSTATE	
Item 410	Traffic Compacted Surface Type "A" or "B"	816	3490	~Cu.Yd.
Item 616	Calcium Chloride	17	70	~Tons
Item 404	Asphalt Concrete or an Approved Bituminous Premixed Surface Course For Maintaining Traffic.	10	40	~Cu.Yd.
Item 616	Water	17	70	M Gal.

PROFILE

The profile of the proposed Asphalt Concrete course shall be approximately 1¼ inches above that of the existing pavement.

SEEDING

Along the mainline S.R-41, I.R-75 & Interchange ramps, quantities for seeding are calculated for the soil areas between lines ten (10) feet outside the work limits, as shown on the cross-sections, or to the right-of-way line if such line is less than ten (10) feet from the work limits.

Along the intersecting approach roads and streets, quantities for seeding are calculated for the soil areas between the work limits, as shown on the cross-sections.

EROSION CONTROL

Item 601 and 660 are provided in these plans for erosion control. Rock or turf of a stable nature will not be removed in order to place any of these items. The Engineer may check and non-perform any quantities or adjust locations and quantities for these Items where indicated by field conditions during construction.

REMOVAL OF TREES AND STUMPS

All trees and stumps specifically marked for removal within the construction limits of this project shall be removed under the lump sum price bid for Item 201 Clearing and Grubbing, except that those trees for which protection and preservation work is indicated elsewhere in these plans shall not be removed.

The following is an approximate estimate of the number of trees and stumps to be removed.

I-75-4(26)74

SIZES	NO. TREES	NO. STUMPS
18"	17	1
30"	3	–
48"	1	–
60"	–	–

The above estimate is approximate and the State of Ohio reserves the right to order the removal of additional trees or stumps outside of the limits of construction but within the right-of-way and/or easement lines. Payment for the removal of these additional trees or stumps shall be included in the lump sum price bid for Item 201 Clearing and Grubbing.

REMOVAL OF EXISTING PIPE

The removal of existing pipe drains which would normally be removed in various excavation items shall be included for payment in the unit price bid for the respective excavation items, unless otherwise itemized in the plans.

CONNECTIONS TO EXISTING PIPE

Where the plans provide for proposed conduit to be connected to, or to cross either over or under an existing sewer, it shall be the responsibility of the Contractor to locate the existing pipe both as to line and grade before he starts to lay the proposed conduit.

Payment for all operations described above shall be included in the unit price bid for the pertinent 603 Conduit Items.

WATER POLLUTION, SOIL EROSION, AND SILTATION CONTROL

Where erosion is likely to be a problem, the Engineer will limit the area of excavation and embankment operations in progress commensurate with Contractors capability and progress in keeping the finish grading, mulching, seeding, and others such permanent control measures current in accordance with the accepted schedule-- should seasonal limitations make such coordination unrealistic temporary erosion control measures shall be taken immediately as directed by the Engineer to the extent feasible and justified. Cost of all the above shall be included in the unit price bid for 203 Excavation Not Including Embankment Construction.

The following estimated quantities are to be used as directed by the Engineer for erosion and siltation control measures:

		URBAN	INTERSTATE
207	Temporary Seeding and Mulching	6795 ~ Sq.Yd.	37052 ~ Sq.Yd.
207	Water	15 ~ M.Gal.	80 ~ M.Gal.
207	Temporary Slope Drains	100 ~ Lin. Ft.	100 ~ Lin. Ft.
207	Temporary Benches, Dams, and Sediment Basins	32 ~ Cu.Yd.	134 ~ Cu.Yd.
207	Mowing	76 ~ M.Sq.Ft.	417 ~ M.Sq.Ft.
659	Commercial Fertilizer (12-12-12)	145 ~ Ton.	792 ~ Ton
659	Repair Seeding and Mulching	1699 ~ Sq.Yd.	9263 ~ Sq.Yd.

605 AGGREGATE DRAINS

Aggregate drains shall be placed at fifty (50) foot intervals on each side of normal crowned sections and at twenty-five (25) foot intervals on the low side only of superelevated sections, except where Item 605 Pipe Underdrains have been provided.

Aggregate drains adjacent to reinforced Portland Cement concrete pavement shall be placed at each transverse joint on the outside edge of normal sections and on the low side of superelevated sections.

An aggregate drain shall be placed at the low point of each sag vertical curve.

MIA.-75-(9.17-9.35)
MIA.-41-(11.16-11.38)

GENERAL NOTES

PIPE CONNECTIONS TO CORRUGATED STEEL STRUCTURES

Connections of proposed longitudinal drainage to corrugated steel structures shall be by means of a shop fabricated or field welded stub on the structure. The stub shall meet the requirements of 707 and have a minimum length of two feet and a minimum thickness of 0.064 inches.

Location and elevation of the stub are to be considered approximate and may be adjusted by the Engineer to avoid cutting through joints in the structure.

The field welded joint, if used, shall be painted on the inside and outside with two coats of red lead paint, 708.06 and two coats of graphite paint, 708.13. Welding shall meet the requirements of 513.17.

A concrete collar as per Standard Drawing MC-4 will be required to connect the longitudinal drainage to the stub when pipe other than corrugated steel is provided for the longitudinal drainage.

Payment for cutting into the structure and providing the connection described shall be included in the unit price bid for Item 603.

MAINTENANCE OF SEWER FLOWS

The Contractor shall conduct his operations as to maintain at all times sewer flows through existing facilities to remain in place and through existing facilities to be replaced untill new facilities are completed and placed in use.

Payment for any additional costs involved in maintaining these flows by pumping or by any other means approved by the Engineer shall be included in the unit price bid for the respective items of 603 conduit.

203 PROOF ROLLING

An estimated quantity for this item has been provided in the general summary for use in proof rolling of subgrade for the ramp pavement, and for paved shoulders.

ANIMAL GUARD FOR PIPE OUTLETS

Animal guards shall be provided at the outlet end of all pipe underdrains and farm drains except when they outlet into a drainage structure. The animal guard shall comply with the detail shown on Sheet No. 22 .

Payment for all material, labor and installation shall be included in the unit price bid per each for Item 604 Animal Guard for Pipe Outlet.

MATERIAL AND EQUIPMENT STORAGE

No materials, equipment or private vehicles shall be stored or parked within the median or within thirty feet (30') of the outside edge of the existing pavement of I.R.-75. The field offices and the Contractors main storage areas shall not be located within the Limited Access (4A) Fence.

UNDERDRAIN OUTLET

An estimated quanity of Item 603-6" Conduit Type "F" has been included in these plans to be used if and as directed by the Engineer, to outlet pipe underdrain which might not have been in plan details. 6" Conduit Type "F" 100 -Lin. Ft. Interstate

The existing 6" underdrain outlets shall be connected to the proposed 6" Conduit, Type "F", with corrugated metal connecting bands. The cost of these bands shall be included in the unit price bid for the new conduit.

BERM CONSTRUCTION

The Contractor shall provide a shield to prevent the spraying or drifting of liquid bituminous material onto the edge of the pavement or edgelines. The attention of the Contractor is directed to 107.12 of the specifications.

PRESERVATION OF SIGNS

The Contractor shall be responsible for all damage to signs, delineators, or mileage markers within the construction area.

The Contractor shall restore at his own expense such property to a condition similar or equal to that existing before such damage.

MONUMENTS

Monuments shall be constructed in accordance with details shown on Standard Drawing MC-1 for locations, See Sheet Nº 22 .

REVIEW OF DRAINAGE FACILITIES

Before any work is started on the project, and again before final acceptance by representatives of the State and the Contractor along with local representatives shall make an inspection of the existing sewers within the work limits which are to remain in service and which may be affected by the work. The condition of the existing conduits and their appurtenances shall be determined from field observations. Records of the inspections shall be kept in writing by the State.

All new conduits, inlets, catch basins, and manholes constructed as a part of the project shall be free of all foreign matter and in a clean condition before the project will be accepted by the State.

All existing sewers inspected initially by the above-mentioned parties shall be maintained and left in a condition reasonably comparable to that determined by the original inspection. Any change in the condition resulting from the Contractors operations shall be corrected by the Contractor to the satisfaction of the Engineer.

Payment for all operations described above shall be included in the unit price bid for the pertinent 603 conduit items of the contract.

ITEM 403 LEVELING MATERIAL

Item 403 Asphalt Concrete is provided for use as directed by the Engineer, at the rate of 75 Cu.Yds. per mile of 24 foot wide pavement, including berms, to correct minor depressions and correction of pavement crown. A total of 300 Cu.Yds. of Item 403 carried to the General Summary. 250-Cu.Yd. Interstate; 50-Cu.Yd. Urban

ITEM 617 COMPACTED AGGREGATE; AS PER PLAN

The aggregate shall be crushed limestone and shall meet the requirements of 617.03. It shall also meet the following grading requirements:

SIEVE SIZE	TOTAL PERCENT PASSING
1"	100%
No. 4	25-60%
No. 40	7-30%
No. 200	0-15%

ITEM SPECIAL: BRIDGE DECK SURFACE REPAIR

This item shall consist of repairing deteriorated concrete bridge deck surfaces prior to application of Bridge Deck Waterproofing in accordance with the proposal note. The following estimated quantities have been included in these plans to be used if and as directed by the Engineer.

Item Special: Concrete Bridge Deck Repair 3 Sq. Yd. Quan. to page 136

ITEM SPECIAL: BRIDGE DECK WATERPROOFING

All bridges within the limits of resurfacing shall be waterproofed prior to resurfacing in accordance with the proposal note.

ROCK CHANNEL PROTECTION

It is not necessary to remove any existing Rock Ditch Protection to place proposed Rock Channel Protection. Place the proposed Rock Channel Protection over any existing Rock Ditch Protection or in proposed ditches so that a total minimum depth of 18" is obtained by the Engineer.

EXCAVATION

Item 203 Excavation should be constructed to be Excavation Not Including Embankment Construction throughout this set of plans unless specifically noted otherwise.

SPECIAL: DRILLED WELL ABANDONED

The existing concrete or stone slab well cover and pumping equipment shall be removed and disposed of. The casing shall be cut off at least one foot below the proposed finished grade outside proposed pavement areas or at least one foot below the proposed sub-grade elevation inside proposed pavement areas. The well shall be filled from bottom to top with clean puddled clay or concrete.

The unit price bid per each for Item Special Drilled Well Abandoned shall include payment for all labor, tools, materials, and incidentals necessary to complete this item.

RESTRICTED SPEED ZONES

The State may at its discretion journalize speed zones where construction operations have changed road conditions, such as, reduced number of lanes, reduced lane width, open trenches, temporary roadways, etc. Where journalized speed zones are used, all existing Prima Facie Speed Limit Signs within the the zone shall be covered. The prima facie speed limit should not be altered unless the changed road conditions are expected to exist for extended periods of time. During short periods of hazard adequate warning signs with advisory speed signs, and flagman shall be utilized in accordance with the latest edition of the "Ohio Manual Of Uniform Traffic Control Devices" as directed by the engineer.

Prior to using such traffic control devices a traffic control plan shall be approved by the District Traffic Engineer in writing. The minimum length for either journalized or advisory speed zones shall be ½ mile. All signs used within the construction area shall be furnished and placed by the Contractor.

Any signing required beyond the contract limits shall be furnished and placed by The Department Of Transportation. The cost of all the above shall be included in the lump sum bid for Item 614, Maintaining Traffic.

MEDIAN CONSTRUCTION EQUIPMENT CROSSING

Construction equipment shall cross the median only at the existing and proposed U-Turn Crossovers and at other additional designated locations as directed by the Engineer. The total number of Equipment Crossings shall be limited to one (1) per mile.

The Contractor shall be responsible for the restoration of the additional Equipment Crossings to a condition at least equal to that existing prior to work operations. All restoration work shall be done in accordance to the Pertinent Specification Items and as directed by the Engineer.

When Median Crossovers are used by construction equipment, these crossovers shall be treated as a work area on both northbound and southbound lanes at each location, and traffic control shall be provided in accordance with the drawing on Sheet No. 9A .

When the Median Crossovers are being used in the area of one lane traffic operation, the Contractor shall provide the services of a special duty Highway Patrolman to control traffic flow. The cost of all of the above shall be included under Item 614.

FARM DRAINS

All farm drains which are encountered during construction shall be provided with unobstructed outlets under the direction of the Engineer. Existing collectors which are located below the roadway ditch elevations and which cross the roadway shall be replaced within the construction limited by Item 603 Conduit, Type "B" one commercial size larger than the existing conduit.

Existing collectors and isolated farm drains which are encountered above the elevation of the roadway ditches shall be outletted into the roadway ditch by 603 Type "F" Conduit. The optimum outlet elevation shall be, if possible, one foot above the flowline elevation of the ditch. Lateral tile fields which cross the roadway shall be intercepted by 603 Type "E" Conduit and carried in a longitudinal direction to an adequate outlet or roadway crossing.

The location, type, size, and grade of required replacements shall be determined by the Engineer during construction and payment shall be made on final measurements.

The following estimated quantities have been included in the General Summary for the work noted above:

	URBAN	INTERSTATE
Item 603 8" Conduit; Type "B"	25 -Lin. Ft.	75 -Lin. Ft.
Item 603 6" Conduit; Type "E"	25 -Lin. Ft.	75 -Lin. Ft.
Item 603 6" Conduit; Type "F"	25 -Lin. Ft.	75 -Lin. Ft.
Item 601 Rock Channel Protection Type "B" 18" thick Bed	15 -Cu. Yd.	15 -Cu. Yd.

Necessary bends or branches shall be included for payment in the pertinent conduit item. None of the above materials shall be ordered by the Contractor until requested by the Engineer.

TRAFFIC MAINTENANCE NOTES

FHWA REGION	STATE	PROJECT	
5	OHIO		

9
174

MIAMI COUNTY
MIA.-75-(9.17 - 9.35)
MIA.-41-(11.16-11.38)

I R 75

In addition to the requirements for maintaining Traffic as indicated in the "Ohio Manual of Uniform Traffic Control for Streets and Highways", current edition, latest revision, and pertinent items of the specifications, the following requirements shall apply:

One lane of directional traffic will only be permitted for the following operations: Pavement Removal, Base Replacement, placement of overhead structural steel on S.R.-41 and actual resurfacing operations between the hours of sunrise and sunset. Traffic shall not be crossed over the median at any time.
*- See below. See Sheet 9-A for detail of "Closing One Lane"

The Contractor shall submit in writing a schedule of operations to the Director of Highways and receive approval before work is started on the project.

No work on I.R.-75 pavement, ramps, or berms shall be performed by the Contractor from 2:00 P.M. Friday, to 6:00 A.M. Monday. No work on I.R.-75 pavements or ramps shall be performed by the Contractor 24 Hrs. preceding or succeeding and including a National Holiday. No work on I.R.-75 pavements, ramps, or berms shall be performed between the hours of sunset and sunrise. During the above "No Work Period" uninterrupted two-lane traffic in each direction shall be maintained.

The Contractor shall furnish and place reflectorized drums, barricades or cones 50' % on center-line pavements in work areas where and only during the time one-lane traffic is being maintained, unless otherwise shown in the plans or as directed by the Engineer. The Contractor shall require a workman to patrol and maintain the reflectorized cones at all times, during periods when traffic is being maintained along said cones, as directed by the Engineer.

Temporary pavement marking shall consist of a 6"x18" rectangle of reflective white paint or white reflective pressure sensitive pavement marking tape and shall not be less than 9 mils or more than 16 mils and shall be readily visible when viewed with automobile headlights at night. These rectangles shall be placed longitudinally on the pavement at a maximum of 30-foot intervals 5 inches left of centerline of pavement and on the right edge of the main-line pavement. This temporary marking shall be placed before the end of each working day. Cost of the above to be included in the Item 614 Maintaining Traffic.

All work on ramps, including resurfacing, shall be completed during the detour period of S.R.-41.

If the Contractor so elects, he may submit alternate methods for the maintenance of traffic provided the intent of the above provisions is followed and no additional inconvenience to the traveling public results therefrom. No alternate plan shall be placed into effect until approval has been granted, in writing by the Director.

During the placing of structural steel for the S.R.-41
*- bridge and the overhead sign support at Sta. 526+50, traffic on I.R.-75 may be halted momentarily to swing one beam member into place and to install the minimun number of splice bolts to support the member. After the placing of one beam, all halted traffic shall be allowed to proceed, before again closing the lanes to traffic for beam placement.

At the close of one calendar week of production of the final pavement resurfacing, permanent pavement marking shall be initiated and completed. This shall include, but is not limited to, lane lines, edge lines and the entrance and exit terminals of the accelleration and deceleration lanes of the interchanges.

In lieu of the provisions of the second paragraph of sub-paragraph (C) Item 614.03 the following provisions shall apply to the project.

1. Existing speed limit signs shall be covered when the signs face a single directional lane of traffic, or within work limits.

2. All barricades, cones, markers, signs, etc., required for the maintenance of traffic throughout the project shall be furnished, erected, and maintained in a clear legible and good working condition, at all times and subsequently removed by the Contractor.

Payment for providing, erecting, covering, maintaining, and removing barricades, cones, markers, and other traffic control devices, furnishing State Highway Patrolmen as specified, as well as other requirements listed above shall be included in the Lump Sum Bid for Item 614 Maintaining Traffic.

S.R.-41: Two-way traffic shall be maintained at all times on existing and/or proposed S.R.-41, except that for a period not to exceed 120 consecutive calendar days, traffic may be detoured as shown. One-way traffic will be permitted for minimum periods of time consistent with the requirements of the specifications for protection of completed Asphalt Concrete Courses.

The Contractor shall, in addition to the general requirements of Item 614, provide erect and maintain standard 48"x 36" size, (ROAD CLOSED) signs, sign supports and lights at the following locations.

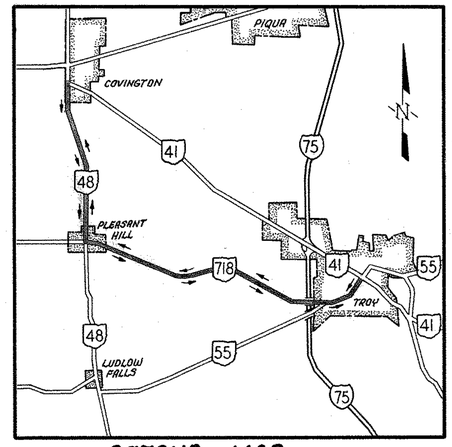
1. Experiment Farm Road at Eldean Road

2. Stanfield Road at Washington Road

Sign supports and lights for (ROAD CLOSED) signs shall be as detailed in the "Ohio Manual of Uniform Traffic Control Devices of Streets and Highways", current addition, latest revision.

Payment for providing, erecting, maintaining and removing lights, signs, and sign supports shall be included in the lump sum price bid for Item 614 Maintaining Traffic.

If the Contractor so elects he may submit alternate methods for the maintenance of traffic provided the intent of the above provisions are followed and no additional inconvenience to the traveling public results there from. No alternate plan shall be placed into effect until approval has been granted in writing by the Director.



DETOUR MAP

ITEM SPECIAL -PAVEMENT PATCHING

This Item of work shall consist of removing all loose and unsound pavement concrete as directed by the Engineer and replacement with Item 402 material in the following:

1. At the intersection of Transverse and Longitudinal Joints.
2. At both edges of the concrete pavement.
3. Along Longitudinal Joints.

The estimated average depth of concrete to be removed is 3 inches. It is not intended to remove sound concrete except where necessary to even up irregular areas adjacent to unsound concrete areas.

Unless otherwise permitted by the Engineer, this work shall be accomplished during the same period of time a lane closure is in effect for other contract work, such as full depth joint repairs and bridge deck repairs. Unless a lane must remain closed overnight for other contract work, the "D" crack repairs shall be scheduled so as to avoid overnight lane closures.

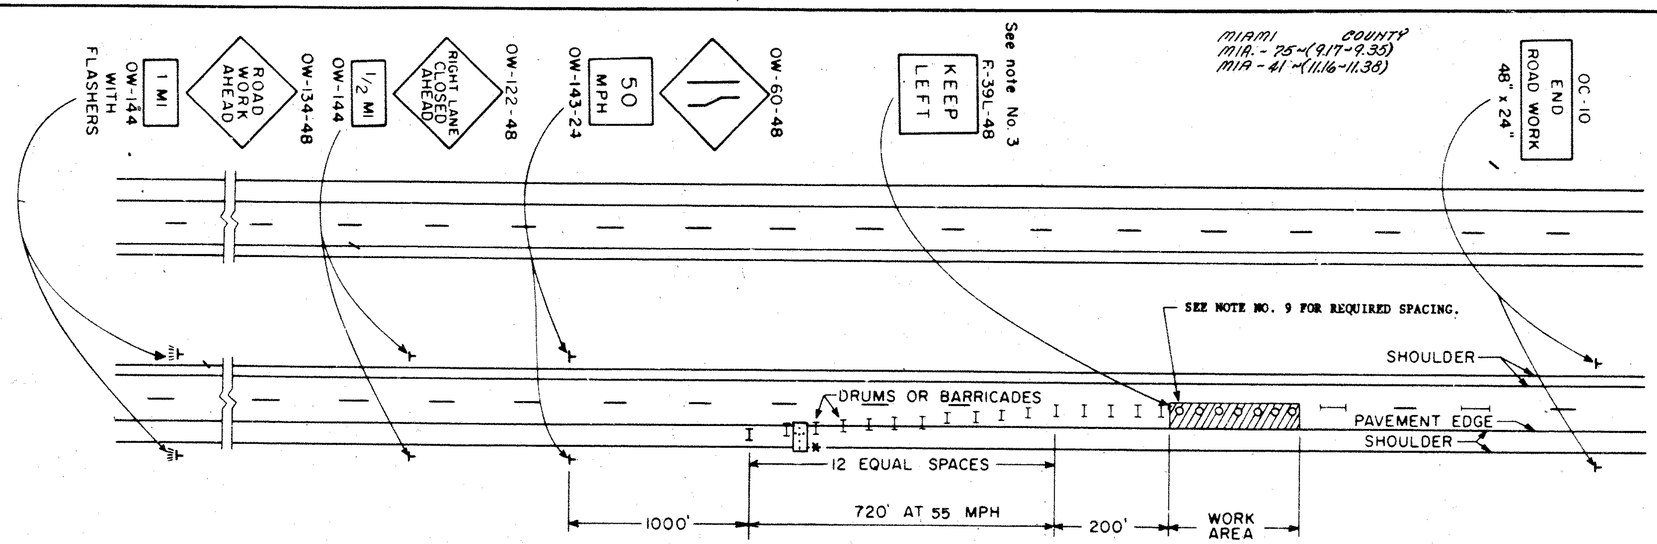
After the unsound concrete is removed, the exposed areas of concrete shall be thoroughly cleaned using compressed air or water under pressure as directed by the Engineer. With the exposed concrete in a clean and dry condition, a tack coat, using any one of the materials specified elsewhere in the plans for Item 407 Tack Coat, shall be applied at the rate of approximately 0.10 gallon per square yard. Item 402 material shall then be placed in the removed area and throughly compacted as directed by the Engineer. The units to be paid for shall be the actual number of square feet patched, as measured at the pavement surface. An estimated quantity of 528 sq. ft. has been provided in the plans. Payment for Item Special-Pavement Patching shall include all labor, equipment and materials necessary to complete the work and including the 407 Tack Coat and 402 Asphalt Concrete.

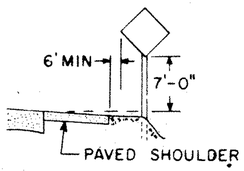
PROTECTION OF GENERAL PUBLIC

If the Contractor, at any time, fails to comply with the provisions set forth in the plans, Proposal, Specifications and the Ohio Revised Code that refer to the protection of the General Public within the limits of the Project, the Engineer upon such notification shall immediately inform the Contractor of noncompliance and upon failure of the Contractor to initiate corrective action, the Contractor shall be required to cease all construction operations and the Director may take actions as deemed necessary for compliance and the cost of such services will be deducted from any money which may be due or becomes due the Contractor.

TRAFFIC MAINTENANCE NOTES

MIAMI COUNTY
MIA.-75-(9.17-9.35)
MIA-41-(11.16-11.38)



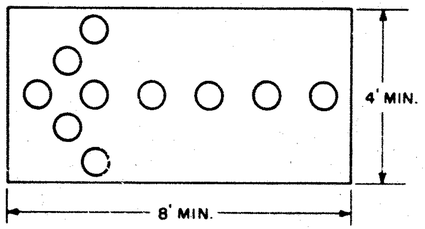


* (A) A PORTABLE ELECTRIC FLASHING ARROW AS SPECIFIED HEREIN SHALL BE PLACED AT THIS LOCATION WHEN THE WORK AREA IS:

1. ON ANY FREEWAY OR EXPRESSWAY OR
2. ON ANY ROADWAY HAVING A SPEED LIMIT 55 MPH

(B) A SIGN, OW-138-36 MAY BE USED IN LIEU OF THE ELECTRIC ARROW ON ALL ROADWAYS NOT COVERED IN PART A.

PORTABLE ELECTRIC ARROW



ERECT WITH BOTTOM OF PANEL 8' MINIMUM ABOVE PAVEMENT. LIGHTS SHALL BE 12 VOLT, TYPE 4434-A PAR 36 AMBER LENS OR EQUIVALENT WITH FLAT BLACK STEEL VISORS. LIGHTS SHALL FLASH AT A RATE OF 25 TO 35 CYCLES PER MINUTE WITH A 50 PERCENT DWELL TIME. LIGHTS SHALL FLASH SIMULTANEOUSLY OR SEQUENTIALLY TO INDICATE DIRECTION OF VEHICLE MOVEMENT REQUIRED. AN AUTOMATIC DIMMER SHALL BE USED TO DIM LIGHTS AT NIGHT. THE PANEL SHALL BE PAINTED FLAT BLACK.

GENERAL NOTES

1. TRAFFIC CONTROL SHALL BE AS REQUIRED IN THE PROPOSAL AND AS DESCRIBED BELOW.
2. ONE LANE TRAFFIC AREAS SHALL BE CONTROLLED WITH TEMPORARY TRAFFIC CONTROL DEVICES ARRANGED AS INDICATED.
3. PLACE SIGN R-39L AT BEGINNING OF WORK AREA AND AT ONE HALF MILE INTERVALS.
4. ALL SIGNS THAT ARE TO CONVEY THEIR MESSAGES DURING HOURS OF DARKNESS SHALL BE REFLECTORIZED OR ILLUMINATED.
5. THE CONTRACTOR SHALL ARRANGE TRAFFIC CONTROL DEVICES SO THAT ALL INTERCHANGE RAMPS ARE OPEN TO TRAFFIC AT ALL TIMES AS DIRECTED BY THE ENGINEER.
6. LANE TAPER-TYPE I OR TYPE II BARRICADES OR 55 GALLON STEEL DRUMS SHALL BE USED FOR LANE TAPER.
7. CENTER LINE - THE CONTRACTOR SHALL USE 55 GALLON STEEL DRUMS. THE PREDOMINANT COLOR ON DRUMS SHALL BE ORANGE WITH AT LEAST TWO HORIZONTAL, CIRCUMFERENTIAL WHITE REFLECTORIZED STRIPES 4 TO 6 INCHES WIDE.
8. CONES MAY BE SUBSTITUTED FOR BARRICADES OR STEEL DRUMS ON THE TAPER OR FOR THE DRUMS ON THE CENTERLINE DURING DAYLIGHT OPERATIONS.
9. CONES, DRUMS, OR BARRICADES SHALL BE SPACED AT 50' CENTERS
10. WHEN WORK IS BEING PERFORMED IN THE LANE ADJACENT TO THE MEDIAN ON A DIVIDED HIGHWAY, LEFT LANE CLOSED SIGNS SHALL BE SUBSTITUTED FOR RIGHT LANE CLOSED SIGNS. ALSO KEEP RIGHT SIGNS SHALL BE SUBSTITUTED FOR KEEP LEFT SIGNS.
11. ALL TRAFFIC CONTROL DEVICES SHALL BE KEPT IN PROPER POSITION, CLEAN, LEGIBLE AND IN GOOD WORKING CONDITION AT ALL TIMES.
12. ALL VEHICLES, EQUIPMENT, MEN AND THEIR ACTIVITIES ARE RESTRICTED AT ALL TIMES TO ONE SIDE OF THE PAVEMENT UNLESS OTHERWISE AUTHORIZED BY THE ENGINEER.
13. THE CONTRACTOR SHALL PROVIDE THE SERVICES OF ONE (1) SPECIAL DUTY STATE HIGHWAY PATROLMAN FOR THE EXCLUSIVE PURPOSE OF CONTROLLING ONE LANE THROUGH TRAFFIC FOR EACH ONE WAY TRAFFIC ZONE, EXCEPT THAT A PATROLMAN WILL NOT BE REQUIRED IN AREA OF PAVEMENT REMOVAL AND REPLACEMENT WHEN THE CONTRACTOR IS NOT PERFORMING WORK AND OR TRAFFIC CONTROL ITEMS. THE PATROLMAN SHALL BE UTILIZED AS DIRECTED BY THE ENGINEER. INFORMATION REGARDING ARRANGEMENTS AND PAYMENTS BY THE CONTRACTOR FOR SPECIAL DUTY PATROL SERVICES MAY BE OBTAINED BY CONTACTING OHIO HIGHWAY PATROL, 660 EAST MAIN STREET, COLUMBUS, OHIO TELEPHONE 466-2660.
14. PAYMENT FOR PROVIDING, ERECTING, MAINTAINING AND REMOVING SIGNS, BARRICADES, CONES, MARKERS, ETC., SHALL BE INCLUDED IN THE LUMP SUM BID FOR ITEM 614 - MAINTAINING TRAFFIC.

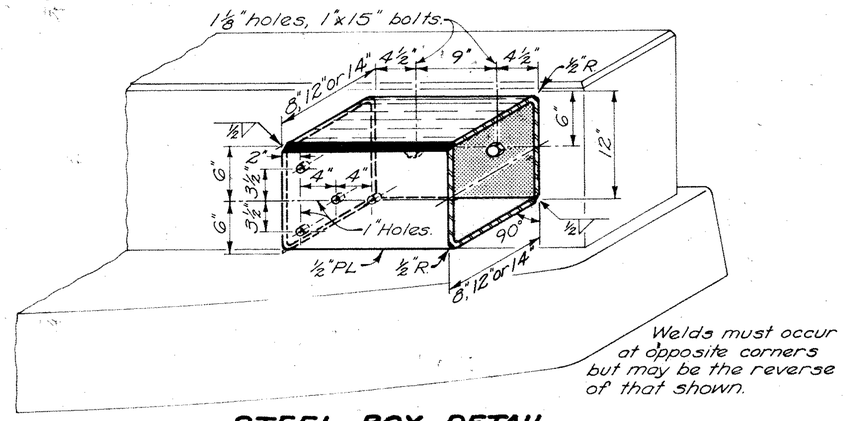
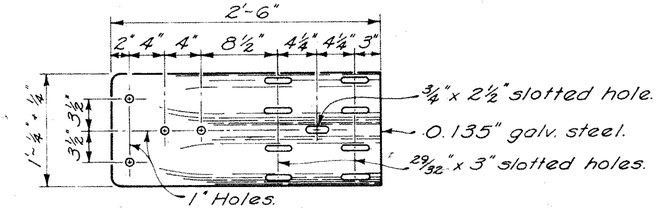
SECTION A-A



STEEL BOX DETAIL

A galv. steel box of the appropriate size (see connection type) shall be used on all approaches.



SPECIAL END SHOE

NOTES

GENERAL: This drawing shall govern where a conflict arises. For details not shown, see Standard Drawings GR-2B & GR-4.

All steel parts shall be galvanized in accordance with 710.06 or 710.10, whichever may apply.

ANCHORS: Self-drilling anchors (of the appropriate size) may be substituted for the 1" and ⅞" hexhead bolts shown in the parapets. Anchors may be of the snap-off chuck-end type or of the flush-end type conforming to Federal Specification No. FF-S-325, Group III, Type 1(a) or (c), or Type 2.

Bolts for use with the self-drilling anchors shall be ⅞"x1½" or 1"x2" as required.

***POSTS:** Place one additional encased post halfway between adjacent posts, or post and parapet, when panel length exceeds 12'-6".

All posts shall be 6"x8" wood or W6x15.5 steel.

GUARDRAIL TERMINATION, as directed by the Engineer. To avoid locating new posts of the adjacent run of guardrail in or near old backfilled post holes or to close existing gaps between rail and parapet, the 12'-6" normal rail section may vary as dimensioned. The horizontal dimensions (1'-2" or 20¾") of the end shoe location may be increased to avoid existing parapet steel.

PAYMENT: Price bid for bridge terminal assemblies shall include the additional cost, in excess of normal guardrail cost, for steel posts, concrete encasement, steel boxes, special end shoes, self-drilling anchors, curbing and embankment.

Connections shall be paid for as 606 Bridge terminal assembly, Type ——.

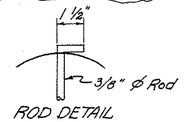
BOLT OR ROD TABLE							
Conduit Size	4"	6"	8"	10"	12"	15"	18"
No. of Bolts or Rods	2	3	5	6	7	9	11



ROD DETAIL

The steel bolts or rods shall be galvanized in accordance with ASTM A 153. The holes in the pipe shall be ½" diameter.

In lieu of drilling or punching holes into the pipe, a metal collar meeting all the above requirements may be clamped on the end of the pipe if, in the opinion of the Engineer, it will provide the same results.

When a pad as shown on Std. Dwg. MC-4 is required at the outlet end of the pipe, a brick may be placed between the pad and the pipe to provide clearance for the bolts or rods.

ITEM 603	58"x36" CONDUIT, TYPE 'A', 707.05	52	LIN. FT.
ITEM 603	12" CONDUIT, TYPE 'B',	24	LIN. FT.
ITEM 603	8" CONDUIT, TYPE 'C'	38	LIN. FT.
ITEM 604	CATCH BASIN, RECONSTRUCTED AS #8	1	EACH
ITEM 602	CONCRETE MASONRY	3.75	CU.YDS.
ITEM 604	STANDARD #2-2-B CATCH BASIN	2	EACH
ITEM 601	ROCK CHANNEL PROTECTION, TYPE 'B'▲	14.22	CU.YDS.
ITEM 202	CATCH BASIN ABANDONED	2	EACH

▲ *with bedding*

WORK REQUIRED: Extend culvert left and right as shown. In median, reconstruct existing 1-4 catch basin as a Nº 8, as per plan. Join ends of existing conduit thru existing 2-2-B catch basins and abandon. A concrete collar shall be used to join existing and proposed 58"x36" conduit.

For collar detail, see sheet 19.

DATUM ELEV. 920.00

DESIGN DATA
Design Area = 174 Acres

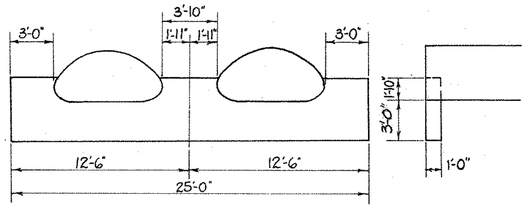
9" 451 on 3" 310

Note: 404 and 402 are included in Ramp Pavt. Quantities.



Detail of Headwall Scale 1"=5'-0"

Work Required: Extend 72"x44" C.M.P. Arches left and right, and construct proposed headwalls. Construct 2-2-B Catch Basins in ditches as shown, and abandon both existing catch basins. Construct connections to existing 10" pipes. Reconstruct median catch basin to a Catch Basin Reconstructed as Nº 8, as per plan. Connect existing and proposed conduit with a concrete collar, left and right.

ESTIMATED QUANTITIES:

Item	604	Nº 8 Catch Basin, Reconstructed as per plan	1 Each
Item	604	Nº 2-2-B Catch Basin	2 Each
Item	605	72"x44" Conduit, Type 'A', 707.05	76 Lin.Ft.

ESTIMATED QUANTITIES FOR STEEL BARS

STRUCTURE STA. 520+71.50 (LT.)

SCALE: 1"=10'

WORK REQUIRED:

Remove concrete inlet left, within (1) foot of end of existing pipe. Construct connector-inlet as shown with concrete slab top.

Construct headwall and inlet end of 138' pipe extension left to meet proposed ditch elevation. Also construct 2' catch basins, one on each side and outletting them into the connector inlet, as shown.

BAR SIZE is indicated in the bar mark. The first digit where three digits are used and the first two digits where four are used, indicates the bar size number. For example E601 is a No. 6 size bar and E1101 is a No. 11 size bar.

* SPIRAL DETAILS shall be in accordance with CRSI Standard Practice, except as otherwise shown.

BAR DIMENSIONS shown are out, to out, unless otherwise indicated.

"STD" written in place of a dimension indicates a standard bend at the end of the bar.

Refer to CMS Sections 106.03, 700, 709.01 through 709.05 and 709.08. Sufficient additional reinforcing steel shall be provided for sampling. Random samples shall be replaced in the structure by the additional steel, splice in accordance with 509.08.

New intermediate crossframe Ls 3"x3"x5/16" Weld both sides of vertical leg and top side of horizontal leg to beam with 1/4" continuous fillet weld. (Typ)

HALF TRANSVERSE SECTION THRU DECK

For Subdrainage of superstructure see sheet 12/12
For Scupper Details See Sheet 11/12
For Field Splice Details See Sheet 11/12

* A typical haunch width of 9" shall be used for computing quantity of concrete. However, the haunch width may vary between 6" and 12" provided that the slope shall be not more than 1:4 for a haunch less than 9" in width.

** DECK SLAB DEPTH: The distance shown from top of deck slab to top of steel beam is the design dimension. The quantity of deck concrete to be paid for shall be based on this dimension, even though deviation from it may be necessary because the top flange of the beam may not have the exact camber or conformation required to place it parallel to the finished grade.

SURFACE ELEVATIONS: The surface elevations of the deck at the face of curb shall be obtained by continuing the slope of the deck of the existing structure. The final surface shall present no breaks in grade in a direction normal to the centerline of S.R. 41.

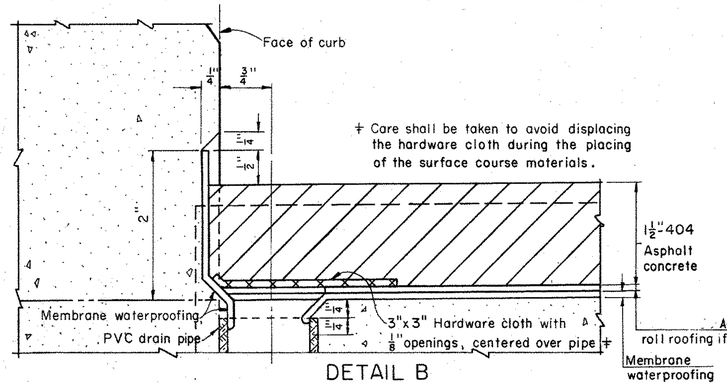
FOR GIRDER OR BEAM BRIDGE

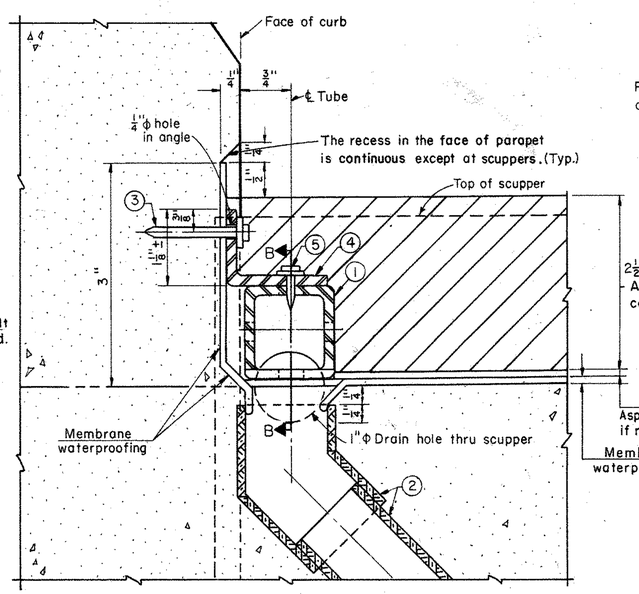
SCUPPER DETAILS

(Scupper details conform to SD-1-69 except as noted)



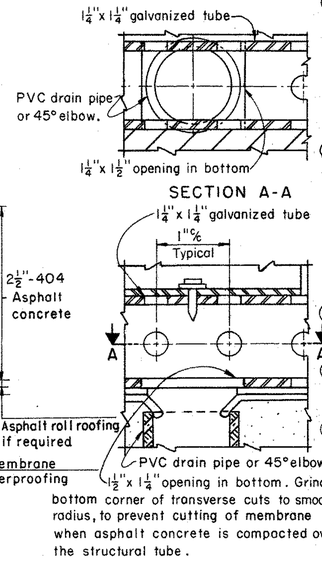
DETAIL B

SUBDRAINAGE FOR 1½" SURFACE COURSE



DETAIL A

SUBDRAINAGE FOR 2½" SURFACE COURSE



SUBDRAINAGE FOR ASPHALT CONCRETE SURFACE COURSE

The subdrainage system shall consist of PVC pipes and fittings and structural tubes as specified on this sheet. The pipes shall be spaced at approximately six foot intervals with a pipe placed within one foot of each expansion joint, except that they shall be relocated or extended as necessary for any discharge to clear bridge seats, structural members such as beams, diaphragms and crossbracing by at least six (6) inches. Pipes shall not be placed over or within four (4) feet of a pavement or sidewalk, within ten (10) feet of the centerline of a railroad track or along curb lines where the deck configuration does not permit water to accumulate.

Where the plans specify a two and one half (2½) inch surface course, the subdrainage shall be as shown on Detail A. The structural tube may be placed in any convenient lengths using butt joints. The price bid per linear foot for this drainage system shall include all PVC pipe and fittings, structural tubes, and all labor necessary to complete the item. The quantity will be the actual length of structural tube required. Payment will be made at the contract price for: Item 518, Lin. Ft., Subdrainage for wearing course, as per plan.

Where the plans specify a one and one half (1½) inch surface course, the subdrainage shall be as shown in Detail B. The price bid for each drain shall include the PVC pipe and fitting, the hardware cloth and all necessary labor to complete the item. Payment will be made at the contract price for: Item 518, Ea., Subdrainage for wearing course, as per plan.

The 404 shall be either 2½" placed in two 1¼" courses or 1½" placed in one course.

① - 1¼"x1¼" galvanized, perforated, structural tube with 1⅛"±Φ holes 1" on centers on all four sides as shown. Cut 1½"± x 1¼" opening in bottom, centered over each PVC drain pipe. The steel for the structural tube shall conform to the following:
PREGALVANIZED, ASTM A446, Grade A Steel, Galvanizing as per ASTM A525.
POSTGALVANIZED, ASTM A569 or A366, Galvanizing as per 711.02.
The minimum steel thickness shall be 0.105".
Any damaged galvanizing shall be repaired as per AASHO M36.
Install tubes with ⅛" expansion opening between pieces.

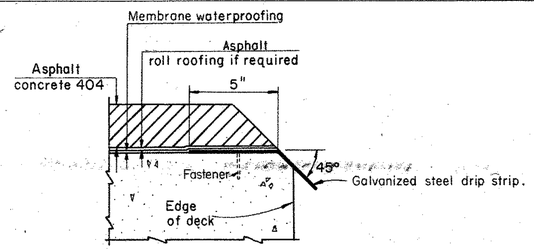
② - 1¼" PVC DRAIN PIPE AND 45° ELBOW. Position accurately to match 1½"x1¼" openings in perforated tube. Place membrane carefully at the pipe openings, making sure to completely seal around the lip of the pipe but taking care not to plug or constrict the opening. The drain pipe and elbow shall comply with ASTM D2661 or ASTM D2665.
The elbow shall be used only as required when structural steel is not below curb line.
Where the elbow is not adequate to provide clearance between the PVC pipe and the structural steel, the elbow shall be canted as required and cut on a line ¼" below and parallel with the deck surface. The solvent cement for the pipe and fittings shall conform to ASTM D2235 or ASTM D2564.

③ - 1¼" x 5/32" x ¼" flat head drive pin and washer.
Fastening of the structural tube by methods other than shown shall be subject to approval by the Engineer. (Driving pins into bridge deck is prohibited.)

④ - L 1½"x1½"x⅛", 3" long, clipped and galvanized, or bent galvanized steel plate 2½"x3"x0.105" thick. Attach to curb at approximately 5'-0" ℄ except near joints, where the angle shall be placed within 6" of the end of each tube section.

⑤ - ½"x⅛"x¼" flat head drive pin and washer driven thru angle and tube.

Note: Wherever "PVC" appears it shall be considered to read "PVC or ABS".



DRIP STRIP
BRIDGES WITHOUT CURBS

Galvanized Steel Drip Strip: Prior to applying deck membrane waterproofing, a bent galvanized steel drip strip, 8"x0.105" shall be installed along the edges of the deck as shown. The strips shall be fastened at 3'-0" ℄ maximum with power driven pins or #10 galvanized expansion screws, subject to the approval of the Engineer. The strips shall be placed the full length of the deck. Where splices are required a 3"(min.) lap shall be used, with a fastener through the lap. Steel shall meet the requirements of ASTM A568 and galvanizing shall be in accordance with 711.02. Payment shall be at the contract price bid for Item Special, Sq. Ft., Galvanized steel drip strip, which shall include all materials, labor, tools and incidentals necessary to complete the item.

unit stress 1333 psi for substructure.
Structural Steel: ASTM A36 unit stress 20,000 psi
Reinforcing Steel: ASTM A615, A616 or A617 - unit stress 20,000 psi. Spiral reinforcement may be plain bars ASTM A82 or A615.

EMBANKMENT CONSTRUCTION: The embankments shall be constructed to the level of the subgrade for a minimum distance of 200 feet back of the abutments. Excavation shall then be made for the abutments.

FOUNDATION BEARING PRESSURE: Rear abutment and all pier footings are designed for a maximum bearing pressure of 2.5 tons per sq. ft. forward abutment footing is designed for a maximum bearing pressure of 2.8 tons per sq. ft.

PLANS OF EXISTING BRIDGE may be examined in the District Office of Sidney, Ohio or in the Bureau of Bridges in Columbus, Ohio.

PROPOSED WORK
1. Remove the existing asphalt concrete from deck.
2. Jack the existing superstructure to an elevation high enough to permit the new work to be performed on the new rear abutment and the existing forward abutment and piers.
3. Remove approach slabs, the entire rear abutment, the entire backwall above bridge seats and wingwalls of the forward abutment.
4. Remove the cap of each pier.
5. Place and compact the new embankment.
6. Excavate behind and beyond the existing forward abutment.
7. Complete embankment at rear abutment and excavate for new rear abutment.
8. Make modifications at piers and forward abutment. Build a new rear abutment.
9. Jack superstructure down to final position.
10. Modify the superstructure by removing the safety curbs, and widen to 80'-0" f/f concrete parapet. Remove raised median and replace with continuous concrete deck.
11. Complete building the abutments above the construction joint at the bridge seat elevation or the optional construction joint at the approach slab seat.
12. Waterproof the deck and place the new wearing surface.

MAINTENANCE OF TRAFFIC: Two lanes of traffic each way on I-75 with a min. horiz. width of 32 feet & a min. vert. clearance of 14 feet 6 inches shall be maintained at all times, except during the erection of the new beams over I-75 traveled lanes. (See Traffic Maintenance Notes, sheet 9) The Contractor shall safeguard the traveling public by providing platforms, nets or other suitable protection above the traveled lanes.

JACKING: Jacking at piers may be done from falsework adjacent to the piers with supports in direct contact with existing concrete footings. The jacking shall be done in such a way as to maintain axial loading of the footings. Jacks shall not be located on the toe of the abutment footing. During jacking the differential of any pier or abutment shall not exceed 3" to prevent cracking of the concrete deck.
No construction equipment will be allowed on the superstructure while there is any such differential.
Approximate loads are:

Rear Abutment	125 tons
Rear Pier	590 tons
Center Pier	650 tons
Forward Pier	500 tons
Forward Abutment	140 tons.

Details of the jacking procedure (3 sets) shall be submitted to the Director 15 days prior to jacking operations, and work shall not commence before the Director's approval is given.

EXISTING STRUCTURE DIMENSIONS affecting new work shall be verified by field measurement.

PRESERVATION OF REINFORCING BARS: Special care shall be taken in removing existing concrete to avoid damage to reinforcing bars which are to be incorporated into new work. Any such bars which are made unusable by removal operations shall be replaced by dowel bars of the same size set 1'-0" into the existing concrete according to Sec. 510.02 at the Contractor's expense.
PLACING OF NEW CONCRETE IN CONTACT WITH EXISTING CONCRETE shall be done in accordance with the applicable parts of Sec. 519.04.

APPROACH SLABS: On Standard Dwg. AS-1-72 the cover of the top reinforcing steel shall be increased to 3" from 2" and pavement jacking holes shall not be provided.

SECTION B-B SECTION C-C

NOTES

To avoid interference of the footing reinforcement with the footing dowel holes, remove 3" from the existing footing and drill the holes over the bottom reinforcement and under the top reinforcement.

BRIDGE SEAT REINFORCING: Reinforcing steel in the vicinity of the bridge seat for center pier shall be accurately placed to avoid interference with the drilling of bearing anchor holes or the pre-setting of bearing anchors.

Remove existing pier caps, preserve column reinforcement and extend columns to the required elevations.

Cap reinforcement for the right frame is similar to the left frame.

Grounding shall be provided for 2"ϕ electric conduit and structural steel of the center pier in accordance with HL-7.

SIGNING GENERAL NOTES

202 REMOVAL OF GROUND MOUNTED SIGNS FOR STORAGE:
This work shall consist of the removal of ground mounted signs as shown on the plans.
All signs removed shall be stored within the limits of the project at locations approved by the Engineer for removal by State Forces.
To assure maintenance of adequate traffic control at all times, no signs shall be removed without the approval of the Engineer.
Payment for removal of signs will include all necessary labor and equipment required to perform the required work as indicated above.

(1) Basis of payment will be as follows for signs forty (40) square feet or greater:
202 Removal of Ground Mounted Major Signs For Storage, at the contract bid price per each.
(2) Basis of payment will be as follows for all other signs:
202 Removal of Ground Mounted Signs For Storage, at the contract bid price per each.

202 REMOVAL OF GROUND MOUNTED SIGN SUPPORTS FOR STORAGE:
This item of work shall consist of the removal of delineators, ground mounted sign supports and foundations as indicated in the plans.
All ground mounted sign supports and delineator post to be removed under this item shall remain the property of the State and shall be stored within the project for removal by State Forces.
The work shall include the removal of supports in such a manner as to avoid bending, twisting or other deformation damage. The foundations shall be removed to a minimum of one foot below the ground surface. Backfilling, restoration and disposal of surplus material will also be included in this work.
Basis of payment will be as follows which price will include all labor and equipment necessary to perform the required item of work:

(1) 202 Removal of Ground Mounted Sign Supports, № 8 Posts and Smaller at the Contract Bid Price Per Each.
(2) 202 Removal of Ground Mounted Sign Supports, Beams Larger than № 8 Posts, at the Contract Bid Price Per Each.
(3) An estimated quantity of 200 delineator posts have been included in these plans.

844 SIGNS FURNISHED BY THE STATE:
The Contractor shall submit, in triplicate, a schedule for sign erection to the Engineer at least 120 calendar days prior to the start of any scheduled erection work. The schedule shall include proposed dates, sign numbers and delivery point. The Engineer will furnish copies of the schedule to the District Traffic Engineer and to the Engineer of Design Services, 25 South Front Street, Columbus, Ohio 43215.

844 ALTERNATE DESIGNS FOR SIGN SUPPORTS:
If the Contractor desires to furnish alternate designs or materials for sign supports, the alternate designs shall be submitted to the State at least 21 days prior to the opening of bids. The bidder will be notified as to acceptance or rejection of alternate design at least 7 days before bids are to be opened. Submissions shall be made to the Ohio Department of Transportation, Bureau of Design Services, 25 South Front Street, Columbus, Ohio 43215.

844 GROUND MOUNTED SUPPORTS, № G POST, AS PER PLAN:
This work shall consist of the furnishing, assembly and installation of two (2) № 3 Drive Posts (№ G Post) in combination with a square welded or seamless galvanized tubular post extension spliced to the top of the № G Post. Details are shown on Sheet № 154.
Square tubular post material shall conform to ASTM-A 570 Grade B.
Work shall include all labor, materials, equipment, tools, and hardware necessary to perform the required work.
Basis of payment will be for 844 Ground Mounted Supports, № G Post, As Per Plan, per linear foot measured by the total overall length of combination post.

DELINEATORS, BY TYPE:
The Contractor shall have the option of driving or concrete embedding delineator posts in accordance with details shown in these plans.
Posts may be trimmed on the embedded end to adjust for grade and required delineator mounting height. Concrete shall be 499 Class C.
The Contractor shall be responsible for damage to underground utilities or cable during performance of this work.
Compensation for the above item will be incidental to various delineator items included within this project.

844 PADLOCKS AND KEYS:
Padlocks furnished shall be either brass or bronze padlocks equal to Master № 4 BKA or Wilson Bohannan 660 and shall be keyed in accordance with 844.10.
Payment will be included in the bid for items being locked.

BALLASTS:
In addition to the requirements of 844.10, ballasts for mecury vapor luminaires shall be located within the luminaire housing or contained in a weatherproof housing contiguous to the luminaire.

844 DISCONNECT SWITCH ENCLOSURE MOUNTING BRACKETS:
This work shall include the fabricating, furnishing and installation of disconnect switch enclosure mounting brackets when enclosures are mounted on existing overhead sign supports or attached to concrete bridge columns or abutments.
Work shall consist of field drilling, attachment and hardware as detailed in the plans.
Basis of payment will be at the contract bid price per each, 844 Disconnect Switch Enclosure Mounting Bracket which price will be full compensation for furnishing, fabrication and installation including all labor, material and incidentals necessary to complete this work.

844 DRIVE POSTS:
Drive posts shall be steel in accordance with 712.20.

REMOVAL OF OVERLAY PANELS:
The Engineer shall notify the District Traffic Engineer seven days prior to the completion of this contract for the removal of sign panel overlays, by State forces, erected on the Mia-75-(5.30) (10.19-10.58)(13.41) contract.

844 REMOVE AND REERECT GROUND MOUNTED SIGNS:
This work shall include the removal of each sign and the reerection on the ground mounted supports at the location shown on the plans.
Basis of payment will be as follows and will include all labor, materials, equipment and incidentals necessary to perform the required work:

844 Remove and reerect ground mounted signs, at the contract price bid per each

Temporary Covering of Signs

A quantity of 600 square feet of temporary covering has been provided for use in covering the advance guide signs on Interstate 75 for the State Route 41 Interchange.

ESTIMATED QUANTITIES

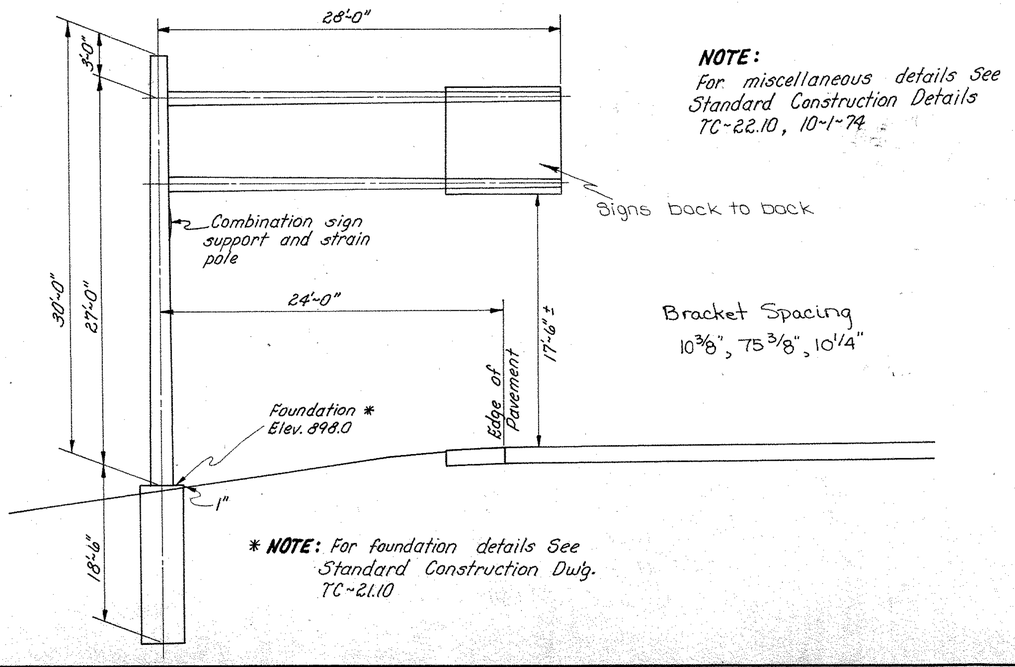
Sign Nº 26

ITEM	844	Combination Overhead Sign Support and Signal Strain Pole, Type TC-12.30, Design 8 Modified, 28' Arm	1-Each
ITEM	844	Signs Erected Extru Sheet	120-Sq.Ft.
ITEM	844	Concrete for Anchor Base Foundations	4.9-Cu.Yd.
ITEM	844	Sign Service	1-Each
ITEM	844	Signs Wired	2-Each
ITEM	844	Disconnect Switch w/enclosure, Type "X"	1-Each
ITEM	844	Ballast, Type CMR1-175	2-Each
ITEM	844	Mercury Vapor fixture w/Type H39-22KB Lamp	2-Each
ITEM	SG25	Ground Rod	1 Each

NOTE: For details not shown See Standard Construction Drawing TC-12.30, 10-1-74



NOTE: For miscellaneous details See Standard Construction Details TC-22.10, 10-1-74

* **NOTE:** For foundation details See Standard Construction Dwg. TC-21.10

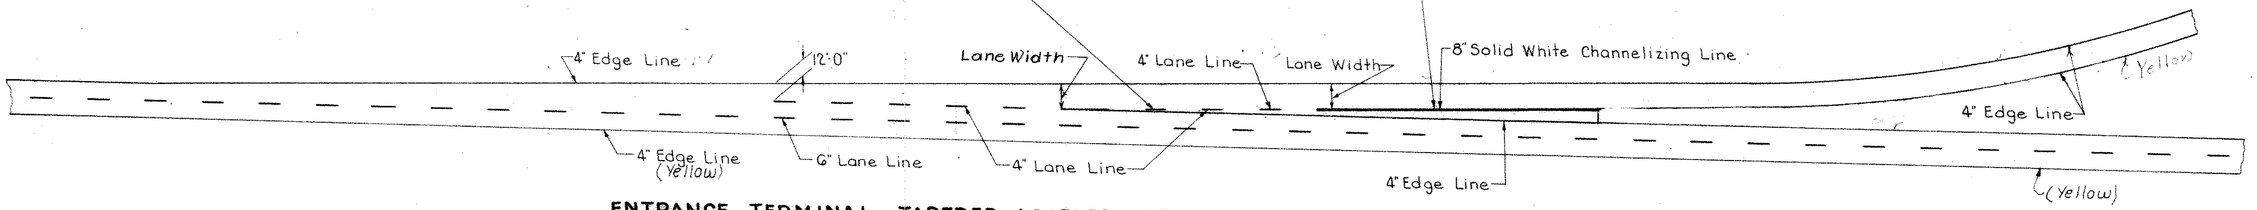
The 8" Channelizing line is an extension of the left edge of the ramp, and is parallel to the right edge.
The solid line must be carried to within 6'-0" of the edge of the through lane or to the end of the ramp curve if closer.
The 4" dashed line should continue to the edge of the through lane.



ENTRANCE TERMINAL - TAPERED ACCELERATION LANE

÷NOTES÷

EDGE LINES: Shall be placed in the locations as shown to conform to Item Nº 621 and defined in section 621.06.

LANE LINES: Shall be placed in the locations as shown to conform to Item Nº 621 and defined in section 621.07.

CHANNELIZING LINES: Shall be continuous white beaded stripes 8" in width placed in the locations as shown to conform to Item Nº 621 and defined in section 621.09.

BROAD TRAVERSE STRIPES WITHIN EXIT RAMP MARKINGS

Shall be 2' wide white beaded stripes set at a 45° angle to the center line of the through pavement and slanted in the direction of the flow of traffic on said pavement. Space between the 2' diagonal stripes shall be 6' as measured parallel to the center line of the through pavement.
Paint on the diagonal stripes shall be applied at the rate of one gallon to each 100 square feet and glass beads shall be applied at the rate of six pounds per gallon of paint. Diagonal white stripes shall be placed between the two 8" white channelizing lines at exit ramps as shown to conform to Item Nº 621 and defined in section 621.11.

EXIT TERMINAL - PARALLEL DECELERATION LANE

DIRECTION OF TRAFFIC

NOTES

1. THE NEAR EDGE OF ALL MAIN LINE SIGNS, EXCEPT GORE INSTALLATIONS, SHALL BE LOCATED TWO FEET (2') BACK OF GUARD RAIL FACE. THIS DIMENSION SHALL BE DETERMINED BY ROADWAY TYPICAL SECTION & USED WHETHER OR NOT GUARD RAIL IS PRESENT.

ON RAMPS THE NEAR EDGE OF SIGNS SHALL BE LOCATED TWO FEET (2') BACK OF GUARD RAIL FACE. THIS DIMENSION WILL BE DETERMINED AND USED AS FOR MAIN LINE ABOVE.

ON APPROACHES THE NEAR EDGE OF SIGNS SHALL BE

(A) TWO FOOT (2') BEHIND EXISTING GUARD RAIL

(B) TWO FEET (2') FROM THE EDGE OF PAVED OR TRAVELED SHOULDER WITH A MINIMUM OF 6' FROM EDGE OF ROADWAY PAVEMENT.

2. POSTS PLACED IN CONCRETE MEDIANS SHALL BE INSTALLED BY DRIVING THROUGH A 6" SLEEVE OR CORE DRILLED HOLE. THE HOLE SHALL BE FILLED WITH ASPHALTIC CONCRETE AFTER THE POST IS IN THE PROPER POSITION.

3. HORIZONTAL BACK BRACING SHALL ALWAYS BE MOUNTED ON THE FRONT FLANGE OF THE SUPPORT EXCEPT WHERE SIGNS ARE MOUNTED BACK TO BACK. BACK BRACING SHALL NEVER EXTEND ABOVE TOP EDGE OF UPPERMOST SIGN PLATE AND SHALL BE ATTACHED TO SUPPORTS USING 5/16" GALVANIZED STEEL BOLTS.

4. SCREWS, NUTS, AND WASHERS FOR SIGN ERECTION SHALL BE ALUMINUM EXCEPT AS NOTED ABOVE. 5/16" TRUSS HEAD SLOTTED MACHINE SCREWS WITH HEX. NUTS PLAIN AND LOCKWASHERS SHALL BE USED. PLAIN WASHERS SHALL BE 5/16" "WIDE", USED ON SIGN FACE ONLY

5. SIGN INSTALLATIONS SHALL BE PLACED SO THAT SUPPORTS ARE NOT PLACED IN DRAINAGE DITCHES.

6. HORIZONTAL CLEARANCES SHOWN PERTAIN TO NON-CURBED SECTIONS. SECTIONS WITH UNMOUNTABLE CURB SHALL HAVE A HORIZONTAL CLEARANCE OF 2'-0" MINIMUM FROM THE CURB FACE TO THE SIGN EDGE.

7. VERTICAL AND HORIZONTAL CLEARANCE BETWEEN SIGNS ON ONE ASSEMBLY SHALL BE A MAXIMUM OF 2" AND A MINIMUM OF 1".

8. GALVANIZED STEEL BEARING PLATES SHALL BE INCLUDED BETWEEN ALL SHEET ALUMINUM SIGNS ATTACHED TO VERTICAL SUPPORTS AT EACH SIGN BOLT LOCATION.

9. SOIL PLATES SHALL BE ATTACHED TO ALL 6 LB. BEAMS BETWEEN POSTS AS DETAILED ON THIS SHEET, EXCEPT WHERE BEAMS ARE PLACED IN CONCRETE MEDIANS AS COVERED IN NOTE 2.

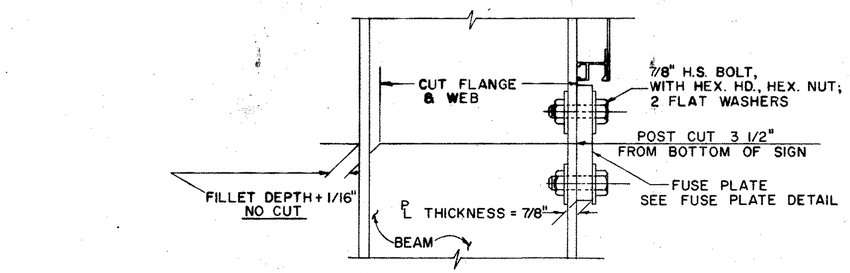
BOLTING PROCEDURE

1. ASSEMBLE POST TO STUB W/BOLTS & ONE FLAT WASHER ON EACH BOLT BETWEEN PLATES.
2. TIGHTEN ALL BOLTS THE MAXIMUM POSSIBLE W/12" TO 15" WRENCH TO BED & TO CLEAN BOLT THREADS. LOOSEN EACH BOLT IN TURN & RETIGHTEN BOLTS IN A SYSTEMATIC ORDER TO THE PRESCRIBED TORQUE OF 750 IN. LBS.
3. BURR THREADS AT JUNCTION W/NUT USING A CENTER PUNCH TO PREVENT NUT LOOSENING.

NOTE: TIGHTEN THE H.S. BOLTS IN THE BASE CONNECTION ONLY TO GIVEN TORQUE DO NOT OVER TIGHTEN

VIEW "A" ROTATED 180°



FABRICATOR NOTE: ALL FRICTION FUSE BOLTS SHALL BE TIGHTENED IN THE SHOP FOLLOWING A METHOD APPROVED BY THE ENGINEER. TIGHTENING SHALL BE TO SUCH A DEGREE AS TO OBTAIN MINIMUM RESIDUAL TENSION IN EACH BOLT OF 36,050 LBS.

NOTE: INSTALL FUSE PLATE WITH NOTCHES TOWARD BASE

LIGHTING & TRAFFIC CONTROL GENERAL NOTES

SPECIFICATIONS

These notes are supplemental to Items 5625 and 5713 of the State of Ohio Department of Transportation Construction and Material Specifications.

5625.03 GENERAL

The power supplying agency for this project is; Dayton Power & Light Company 23 N. Main Street Dayton, Ohio. The voltage supplied shall be 480 volts 2~wire grounded system. Voltage for traffic signals shall be 120 volts.

CONDUIT ON STRUCTURES

Expansion fittings for conduit on structures shall be OZ Type AX, Crouse~Hinds Type XJ~4, Appleton Type XJ~4, or an equal approved by the Engineer, for Bridge No. Mia.~75~0971.

ELECTRICAL SERVICE FOR ILLUMINATED SIGNS

The pay items in the Lighting General Summary include the pull box adjacent to each lighted sign and the electrical service connections leading into the box, including connector kits in the pull box. Quantities for electrical service from the connector kits in the pull box to the sign are included under supplemental specification 844 Items.

HIGH VOLTAGE DIRECT CURRENT TEST

A high voltage direct current test, as described in Supplemental Specification 839, shall be performed on all distribution cable, and duct cable systems to be installed on this project. The test shall not be performed until all new construction, such as guard rail, fence, delineator posts, sign posts, etc., in the immediate vicinity of the location of the cable run being tested, has been completed.

The testing requirements of 5625.22(b) are hereby waved for those circuits on which the high voltage test is to be performed.

5625~CONDUIT JACKED UNDER PAVEMENT

This item shall consist of furnishing and installing conduit of the size indicated under existing pavement and contiguous shoulders by an approved method such as "drilling" or "jacking".

The Contractor shall place the conduit with the least amount of disturbance to the existing pavement, subbase, berm pavement, or shoulders of the roadway. All push pits or any necessary excavations shall be backfilled and restored in accordance with 5625.01.

Measurement of the conduit shall be the actual amount of linear feet installed under pavement and shoulders, measured in place, as accepted by the Engineer. The unit price bid for Item 5625 "Conduit Jacked Under Pavement" shall be full compensation for excavation, drilling or jacking, backfilling, compaction, restoration, and all labor, material, equipment, and incidentals necessary to complete the work as specified.

CONTROL CENTER

The control center shall consist of one 30 ampere combination lighting contactor and safety switch enclosure having interior dimensions per HL~15. Size of fuse for each lighting branch circuit shall be as indicated on Sheet 162.

Payment for Item 5625 "Service Pole and Control Center" will be under a lump sum price, included are all necessary wiring, conduit ells, ground rods and photo~electric cell.

5625.13~PLASTIC CAUTION TAPE

The location of underground duct cable installed for high mast lighting circuits shall be marked by the use of a continuous identifying tape buried in the trench above the duct cable. The identifying tape shall be an inert material approximately 6" wide polyethylene plastic, highly resistant to alkalis, acids, or other chemical compounds likely to be encountered in soils. The tape shall be brightly colored for contrast with the soils. The color shall be in accordance with established standard utility practice for identifying electrical cable, water line, etc. The tape shall have identifying printing "Electric" or other appropriate message. The identifying lettering shall be repeated continuously the full length of the tape. Tapes shall be supplied in continuous rolls. Identifying tapes shall be buried in the cable trench. Tapes shall be located approximately 8" below the finished grade. The tape shall be placed in the trench with the printed side up and shall be essentially parallel with the finished surface. The Contractor shall take necessary precautions to insure that the tape is not pulled, distorted, or otherwise misplaced in completing the trench backfill. The caution tape shall be one of the following types: Allen Systems, Terra Tape, or an equal approved by the Engineer. The caution tape shall be paid for per linear foot of Item 5625 "Plastic Caution Tape" complete and in place.

CONNECTOR KITS

At the option of the Contractor, Type IV cable connections may be substituted where type II or III cable connections are specified in hand holes or transformer bases of light poles.

Type I through type VII cable connections in pull boxes, junction boxes, and other enclosures below ground may be accomplished by the use of either of the following:

1. A sleeve or tee cable connector conforming to the general requirements of style "S" or "H", or other connecting device approved by the Engineer. The connector shall be installed in accordance with the manufacturer's directions and the connector shall be sealed and waterproofed with a high~dielectric compound such as "Aqua Seal" as manufactured by Kearney or an equal approved by the Engineer. The sealing material shall be applied in accordance with the manufacturer's directions to make a watertight connection. Connections not accomplished in~line or in~tee form shall be additionally protected by use of a high~dieletric PVC, or other approved material, boot with an approved fastening device.
2. A preassembled Kit, as manufactured by Joy or Bussman, or an approved equal, with a waterproof or watertight rating acceptable to the Engineer.

605 UNDERDRAINS

An estimated quantity of "300 Linear feet of 605, 4~inch shallow pipe underdrains" is provided in the lighting general summary for use as directed by the Engineer in providing positive drainage for pull boxes in fill areas. It is intended that all pull boxes in these areas be provided with such drainage, provided the length of underdrain necessary to obtain a satisfactory outlet does not exceed 20 feet approximately. A perforated PVC pipe or conduit material approved by the Engineer may be used in the construction of this item.

843~2 PHASE, SEMI~ACTUATED CONTROLLER WITH CABINET

The Contractor shall furnish and install a two~phase semi~actuated traffic signal controller at the location shown on the plans. The controller shall be capable of providing the basic signal sequence in accordance with the signal operation plans.

The controller shall exhibit a manual sequence capability and the cabinet shall have a separately lockable police door. The controller and cabinet shall have all required features and auxiliary equipment in accordance with supplemental specification 843 and the signal operation plans.

Cost of the above item shall be payable at the unit price bid for Item 843 "2~Phase Semi~Actuated Controller with Cabinet" and shall include all labor, materials, equipment and necessary incidentals required to perform the above item.

FOUNDATION DETAIL

1. ITEM 605, 4" Shallow Underdrain, Pull Box must drain.
2. Duct-cable entering pull box must be sealed in an approved manner so that water can not drain into the low point in the duct-cable and freeze. Cap duct-cable per capping detail, Std. Construction Drawing HL-1 or an approved heat-shrinkable material.

Materials shall conform to the requirements of 3625 and 3713 of the State of Ohio, Department of Transportation Construction and Material Specification, in effect.

In lieu of the provisions of 3625.06 modifying the depth of light tower foundations in rock excavation areas, tower foundations in rock shall be enlarged or redesigned as directed by the Engineer, Payment shall be made by supplemental agreement.

SECTION - S-S

NOTES:

MATERIAL SPECIFICATIONS

1. TAPERED TUBES (S.A.E.-1020 STEEL PROCESSED TO MINIMUM YIELD STRESS OF 55,000 P.S.I.
2. CAST ANCHOR BASE & HANDHOLE FRAME - ASTM-A27-GRADE 65-35.
3. HANDHOLE COVER PLATE - 11GA. STEEL SAE-1015
4. CAST ALUMINUM POLE TOP - ALUMINUM ALLOY 43
5. SPAN WIRE CLAMP - LOW ALLOY, HIGH STRENGTH STEEL ASTM-A242 - OR 375, LOAD PRODUCING DISTORTION 12,500 LBS. DIRECT TENSION
6. ALL BOLTS & NUTS LESS THAN 5/8" DIA. PASSIVATED STAINLESS STEEL AISI-300 SERIES - COMMERCIAL GRADE.
7. ALL OTHER NUTS & BOLTS 5/8" DIA & OVER - ASTM-A307 AND GALVANIZED IN ACCORDANCE WITH-ASTM-A153
8. ANCHOR BASE & U-BOLTS - HIGH STRENGTH STEEL - MINIMUM YIELD STRESS 55,000 LBS. SQ. IN. - MIN. ULTIMATE 90,000 P.S.I.
9. WELDING ROD - ASTM-A233 - CLASS E60XX OR 70XX.
10. GALVANIZING - WHEN SPECIFIED ASTM-A123.

TRAFFIC SIGNAL POLE FOUNDATIONS

THE CONTRACTOR SHALL STAKE THE LONGITUDINAL AND LATERAL LOCATION, AND THE ELEVATION OF THE TOP OF EACH FOUNDATION SUBJECT TO THE APPROVAL OF THE ENGINEER. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE PROPER ELEVATION, OFFSET, AND LEVEL OF EACH FOUNDATION. THE FOUNDATION LOCATIONS MAY BE CHANGED AS DIRECTED BY THE ENGINEER, IN CASE OF SLOPE OR SUBSURFACE DIFFICULTIES.
EXCAVATION SHALL BE IN ACCORDANCE WITH THE REQUIREMENTS OF ITEM 503. EXCAVATION SHALL BE TO THE DIMENSIONS SHOWN ON THE PLANS, AND SHALL BE PERFORMED BY MEANS OF AN EARTH AUGER OF THE SPECIFIED DIA. UNLESS OTHERWISE DIRECTED BY THE ENGINEER.
WHERE SUBSURFACE OBSTRUCTIONS ARE ENCOUNTERED, THE ENGINEER MAY REQUIRE THE CONTRACTOR TO REMOVE THE OBSTRUCTION OR TO REPLACE THE EXCAVATED MATERIAL AND RELOCATE THE FOUNDATION.
IF CAVING OF THE EXCAVATION OCCURS, THE CONTRACTOR SHALL EXCAVATE THE SPECIFIED DEPTH MAINTAINING THE THE SIDES AS NEARLY VERTICAL AS POSSIBLE. NO PAYMENT SHALL BE MADE FOR ANY EXCAVTION, CONCRETE, OR REINFORCING STEEL USED IN EXCESS OF THE PLAN QUANTITIES.
CONCRETE, CLASS C, SHALL BE PLACED IN ACCORDANCE WITH THE REQUIREMENTS OF ITEM 511, AND SHALL BE PLACED AGAINST UNDISTURBED SOIL OR COMPACTED EMBANKMENT. STEEL REINFORCEMENT BARS, WHERE REQUIRED, SHALL BE POSITIONED AS SHOWN ON THE PLANS AND PLACED IN ACCORDANCE WITH ITEM 509.
CYLINDRICAL ANCHOR BASE TYPE FOUNDATIONS FOR TRAFFIC SIGNAL POLES SHALL HAVE ANCHOR BOLTS AND CONDUIT ACCURATELY HELD IN POSITION WITH A TEMPLET WHILE CONCRETE IS PLACED. FORMS SHALL BE USED FOR THE UPPER PORTIONS OF ALL FOUNDATIONS AND NO BACKFILLING SHALL BE PERMITTED FROM THE BOTTOM TO SIX INCHES BELOW THE GRADE LEVEL. NO GROUTING OF CONCRETE SHALL BE PERMITTED BETWEEN THE FOUNDATION TOP AND THE POLE BASE.

TRAFFIC SIGNAL POLE

WHERE A WIRE ENTRANCE IS REQUIRED, THE SERVICE ENTRANCE HEAD SHALL BE LOCATED APPROXIMATELY 12" BELOW SPAN WIRE CLAMP.

GROUND ROD

GROUND ROD SHALL BE IN ACCORDANCE WITH TYPICAL GROUND ROD DETAIL AND TESTED IN ACCORDANCE WITH 625.22 "CONSTRUCTION AND MATERIAL SPECIFICATIONS."
