THE CONTRACTOR SHALL, IN ADVANCE OF ANY SECTION OF ROADWAY LACKING OMUTCD FULL PATTERN STANDARD DIMENSION EDGE LINE OR CENTER LINE MARKINGS, ERECT A "NO EDGE LINES" (OW-167) SIGN OR "UNMARKED NO PASSING ZONES" (OW-168) SIGN OR BOTH AS MAY BE APPROPRIATE. THESE SIGNS SHALL BE IN PLACE PRIOR TO EXPOSING THE ROADWAY TO TRAFFIC. THESE SIGNS SHALL BE REPEATED EVERY 1 TO 2 MILES AND AT OTHER LOCATIONS AS NECESSARY. THESE SIGNS SHALL BE REMOVED WHEN THEY NO LONGER APPLY. THE COST FOR FURNISHING AND ERECTING AND SUBSEQUENTLY REMOVING THESE SIGNS SHALL BE INCLUDED IN 614 MAINTAINING TRAFFIC, UNLESS SPECIFICALLY ITEMIZED.

GENERAL

SCOPE OF WORK

The work contemplated under this contract comprises the furnishing and installing, complete with valves and other appurtenances, the following water main relocations and performing other incidental work necessary to abandon existing water facilities.

Existing 12" water main at future location of bridge pier is to be relocated. Water meter vault frame and cover is to be set to grade .

WORK TO BE DONE BY THE CITY OF CLEVELAND , DIVISION OF WATER

The Contractor will install all tapping sleeves, valves and valve boxes. In the case of new mains and new house service connections the city will make the tap . The contractor shall supply the tapping sleeves and valves , lead, and do all the necessary excavation, backfilling, and repaving required therefore. In addition to the above requirements the contractor shall furnish all air compressors required for the work under the specified item .

In locations shown on the plans the contractor will be required to sleeve-in to the existing mains . To speed up this operation, it is called to the contractor's attention that the water department has on hand at harvard yards motor operated pipe cutters which are available for cutting pipe by city forces. The charges include cost of labor , use of pipe cutting machine , and truck . The contractor shall do all necessary excavation, backfilling and repaving and air compressor equipment shall be furnished by the contractor. Charges may be obtained from the permit-sales section of the division of water and heat .

The contractor shall do all the work and furnish all the labor and material necessary for the final completion of this contract in the manner and under the conditions herein specified and provided in accordance with the contract drawings.

THE STATE

The State is the State of Ohio acting through its authorized representative.

ENGINEER

The Engineer is the District Deputy Director or District Engineer, the District Construction Engineer or the District Maintenance Engineer, or the Project Engineer assigned to administer the contract.

THE CITY, OR THE CITY OF CLEVELAND

The City, or the City of Cleveland, is the Director, Department of Public Utilities of the City of Cleveland.

STATUS OF CITY INSPECTOR

Inspectors as designated by the Director of Public Utilities are authorized to inspect all work done and materials furnished. Such inspection may extend to all or any part of the waterwork, and to the preparation or manufacture of the materials to be used in the waterwork. The city inspector as designated by the Director of Public Utilities will make work instructions through the Project Engineer, arrangements for City Inspectors are to be made by notifying Inspection & Enforcement, Division of Water 271-4264 within 3 weeks of construction. No work will be accepted unless inspected.

ACCESS TO WORK AND PLACE OF MANUFACTURE

The Contractor shall notify the Engineer and Director of Public Utilities, at least seven (7) days previous to the commencement of the manufacture of any materials, of the time and place where the manufacture is to commence, in order that a representative of the Engineer and Director may be present to inspect the manufacture. The Contractor shall provide, without charge or expense to the State and City, all necessary assistance to the Engineer and Director when required for inspection or verification of work done.

DIMENSIONS, DETAILED DRAWINGS AND ELEVATIONS

Figured dimensions on drawings shall take precedence over measurements by scale, and detailed drawings are to take precedence over general drawings and shall be considered as explanatory of them and not as indicating extra work. If, however, any of the detailed drawings show more elaborate or expensive work than is normally specified and indicated by the contract drawings, notice thereof must be given to the Engineer by the Contractor within ten (10) days after receipt of such detailed drawings in order that the drawings may be amended or the additional expense on account of such work may be adjusted and authorized. If the Engineer does not receive such notice from the Contractor within ten (10) days after the detailed drawings have been received by him, it is hereby agreed that the Contractor accepts the drawings and will execute them without claim for extra compensation.

FLOODS AND FREEZING WEATHER

Proper facilities shall be provided for protecting the work from damage by flood, rain or frost, and work done in freezing weather shall be done in such manner as the Engineer may approve. Valves shall be protected from freezing until backfilled in the completed work.

ADDITIONAL WORK

(A) - Attention is called to the fact that the work of this contract includes certain performances as incidental to the itemized requirements hereof, though not exclusive as follows: To perform all excavation, backfilling, sheeting, shoring, temporary and final repaving and to test the installation. Sand backfill shall be placed under existing and proposed pavement. For the performances herein described and for other incidental performances of like nature, the State will make no specific or separate payment or allowance, but the cost thereof shall be included in the prices stipulated to be paid for the various items of the work to be done under this contract.

(B) - Preliminary flushing: Before being placed in service all dirt and foreign matter shall be removed from the new water main or extensions to existing mains by a thorough flushing through the hydrants or by other approved means. Each valved section of newly laid pipe shall be flushed independently. This shall be done after the pressure test and may be done before or after the trench shall have been backfilled.

(C) - Chlorination: Following the preliminary flushing, the newly laid water main shall be chlorinated. The process of chlorinating, the method of procedure, the chlorinating agent and the rate of application shall be determine by the Engineer. The City of Cleveland will furnish the necessary labor and material required for such chlorination and install the necessary taps at the ends of the water main sections to be chlorinated. No charge will be assessed the Contractor for any material, labor, tools, equipment and incidentals furnished by the City of Cleveland, Division of Water. The Contractor shall furnish the necessary labor for excavation and backfilling which will be required for the installation of taps for injecting the chlorine solution, operating pumps and flushing mains.

(D) - Final flushing and test: Following chlorination, all treated water shall be thoroughly flushed from the newly laid pipe at its extremities until the replacement water throughout its length shall, upon test, both chemically and bacteriologically, be proven equal to the water quality served the public from the existing water supply system.

(E) For the performances described in paragraphs (B), (C) and (D), the State will make no specific or separate payment or allowances, but the cost thereof shall be included in the prices stipulated to be paid for each linear foot of pipe furnished and installed.

MAINTENANCE OF SERVICE AND CONNECTING RELOCATED MAINS

When the new mains have been tested and chlorinated and are ready to be connected to the old main, the Contractor shall make such connections at a time designated by the City. Prior to shutting down the existing mains, the Contractor shall take suitable precautions to assure a minimum interruption to service, including the following:

(A) Perform all necessary excavation, including bell holes exposing the existing main sufficiently for the operation of the pipe saw by the City, or pipe cutting by the contractor.

(B) Remove the cap or plug from the end of the new main.

(C) Swab the inside of all pipes, bends and sleeves to be used in connection thoroughly with a chlorine solution of at least 100 p.p.m.

(D) Make-up as much of the connection as possible outside the ditch to eliminate the need for caulking most of the necessary joints during the shutdown. By careful measurement all pipe cuts can be made by the Contractor prior to shutting down.

(E) Have sufficient manpower and equipment on the site to perform the operation in a minimum of time.

(F) In the period from May to October shutdowns may not be permitted due to system water demands without special approval of the Commissioner of Water and Heat.

(G) Service is to be maintained in the 6" water main under St Olga Street and the proposed Interstate-490 until the relocation of the West 7th Street has been completed and the new main placed into service.

PAINTING

(A) - It is the intention of these specifications to provide that all metal work subject to corrosion shall be satisfactorily protected by a durable coating of paint or other approved material and that all metal surfaces not buried in earth, or in concrete shall be left clean and well painted at the completion of the contract. Unless otherwise specified, the protection shall be at least that given by three (3) coats of approved paint. The first coat is to be applied at the shop before the metal has rusted and after all grease, dirt and scale has been removed. Bolts and nuts shall not be shop coated, but shall receive three (3) coats of approved paint after installation.

(B) - All metal work which has not been coated before the arrival on the job shall be given a temporary protective coating of such a nature as to permit the ready adherence of future coatings. The temporary coating shall be a good grade asphaltic paint or other approved material. The temporary protection shall apply particularly to the valve boxes and covers, manhole rings and covers, ladders and ladder rungs and elsewhere when in the opinion of the Engineer, such protection is necessary.

(C) - All surfaces of metal which will be in contact after assembling shall be painted, at least one coat, before assembling. The final coat of paint on all exposed work shall be given shortly before the completion of the contract.

(D) - Where painting clauses appear hereinafter, they shall take precedence over this section, except that temporary protection herein described may be required.

(E) - All of this work shall be included in the price bid for the particular item requiring the painting.

TESTS, INSPECTION & REPORTS

Notwithstanding the requirments of any other provisions of these specifications, the Contractor shall arrange for and pay all costs involved for shop inspection of all materials furnished, manufacture of all pipe, valves, fittings, etc., field and shop welds and welding, and furnish to the State and the City of Cleveland copies of all shop, fabrication, manufacture and other related inspection reports of materials furnished. This inspection shall be done by a recognized inspection laboratory, approved by the City of Cleveland. In the case of any item not specifically mentioned in the "Waterwork Notes", the State of Ohio, Department of Transportation "Construction and Material Specifications - January 1, 1983" shall govern.

HANDLING PIPE AND ACCESSORIES

(A) - Unloading: Cast iron or Ductile iron Pipe, fittings, valves, hydrants, and other accessories shall, unless otherwise directed, be unloaded at the point of delivery, hauled to and distributed at the site of the project by the Contractor. They shall at all times be handled with care to avoid damage. In loading and unloading they shall be lifted by hoists or slid, or rolled on skidways in such manner as to avoid shock. Under no circumstances shall they be dropped. Pipe handled on skidways must not be skidded or rolled against pipe already on the ground.

(B) - At site of work: In distributing the material at the site of the work, each piece shall be unloaded opposite or near the place where it is to be laid in the trench.

(C) - Protection of pipe coating: Pipe shall be handled in such manner that a minimum amount of damage to the coating will result. Any cast iron pipe or fitting, the coat of which has been damaged in shipping or handling, shall have the damaged portion well cleaned and covered with an asphalt paint, approved by the Engineer, before being placed in the work. The Contractor shall thoroughly coat all exposed parts of bolts and nuts with an approved asphalt paint, after all pipe has been laid and before backfilling has been placed. All field coating shall be furnished by the Contractor.

GENERAL

(D) - Pipe kept clean: The interior of the pipe, fittings, and other accessories shall be kept free from dirt and foreign matter at all times.

(E) - Frost protection: Valves and hydrants before installation shall be drained and stored in a manner that will protect them from damage by freezing.

CHANGES IN WATER MAINS

Wherever it becomes necessary, in the opinion of the Engineer, to change the location or elevation of water mains and hydrants, and where connections are to be made between existing distribution mains and water mains under this contract, the Contractor shall remove and dispose of all existing water line materials required to make the connection, and shall furnish and install complete, all the cast iron or ductile iron pipe, fittings and valves to make the connections indicated, except branch sleeves and valves which will be installed by the Contractor with the pressure tap made by the City. The Contractor shall also furnish all necessary labor, materials, tools and equipment and make the excavation, backfill and repaving for such connections. Payment for this will be included in price bid under appropriate item for size of water main or connection to be installed. All pipes, valves, hydrants and appurtenances removed shall become the property of the Contractor.

WORK TO BE DONE BY THE CITY

IN LOCATIONS SHOWN ON THE PLANS THE CONTRACTOR WILL BE REQUIRED TO SLEEVE-IN TO THE EXISTING MAINS. TO SPEED UP THIS OPERATION, IT IS CALLED TO THE CONTRACTOR'S ATTENTION THAT THE WATER DEPARTMENT HAS ON HAND AT HARVARD YARDS MOTOR OPERATED PIPE CUTTERS WHICH ARE AVAILABLE FOR CUTTING PIPE BY CITY FORCES. THE CHARGES INCLUDE COST OF LABOR, USE OF PIPE CUTTING MACHINE, AND TRUCK. THE CONTRACTOR SHALL DO ALL NECESSARY EXCAVATION, BACKFILLING AND REPAVING AND ALL AIR COMPRESSOR EQUIPMENT SHALL BE FURNISHED BY THE CONTRACTOR. CHARGES MAY BE OBTAINED FROM THE PERMIT-SALES SECTION OF THE DIVISION OF WATER AND HEAT.

EXCAVATION

(A) The Contractor shall remove all existing structures, roadways, driveways and other similar materials and make all excavation necessary for the proper construction of the water main, pipe connections and appurtenant structures, including tunnel and shaft excavation. The excavation shall include the removal, handling, rehandling and disposal of materials encountered in the work and shall include all pumping, bailing, drainage, sheeting and bracing. Moreover, the Contractor must assume all responsibility for any added expense or other liability which may arise by means of quicksand, obstacles or conditions foreseen and unforeseen or encountered in the work of this contract.

(B) Trenches shall in every case be of sufficient width to permit solid packing of backfill under and around pipes, and satisfactory construction of all appurtenances and for such sheeting and shoring, pumping and draining as may be necessary.

(C) - The trench shall be dug to the alignment and depth required and only so far in advance of pipe laying as the Engineer shall permit. The trench shall be so braced and drained that workmen may work therein safely and efficiently. It is essential that the discharge from pumps be led to natural drainage channels, to drains, or to sewers.

(D) - The trench width may vary with and depend upon the depth of trench and the nature of the excavated material encountered; but in any case shall be of ample width to permit the pipe to be laid and jointed properly and of the backfill to be placed and compacted properly. The minimum width of unsheeted trench shall be eighteen (18) inches and for pipe ten (10) inches or larger, at least twelve (12) inches larger than the outside diameter of the pipe for concrete pipe and eighteen (18) inches larger than the outside diameter of the pipe for cast iron and steel pipe, except by consent of the Engineer. The maximum clear width of trench shall be not more than two (2) feet greater than the outside pipe diameter. When sheeting and bracing is used, the trench width shall be increased accordingly.

(E) - The trench, unless otherwise specified, shall have a flat bottom conforming to the grade to which the pipe is to be laid. The pipe shall be laid upon sound soil cut true and even, so that the barrel of the pipe will have a bearing for its full length.

(F) - Any part of the trench excavated below grade shall be corrected with approved material, thoroughly compacted.

(G) - When the uncovered trench bottom at subgrade is soft and in the opinion of the Engineer cannot support the pipe, a further depth and or width shall be excavated and backfilled to pipe foundation grade as required under (F), or other approved means shall be adopted to assure a firm foundation for the pipe.

(H) - Ledge rock, boulders, large stones, and shale shall be removed to provide a clearance of at least six (6) inches below all parts of the pipe, valves, or fittings and a clear width of six (6) inches on each side of all concrete pipe and nine (9) inches on each side of all cast iron and steel pipe shall be provided.

(I) - Excavation below subgrade in rock, shale or in boulders shall be backfilled to subgrade with approved material, thoroughly compacted.

(J) - Bell holes of ample dimensions shall be dug in earth trenches at each joint to permit the jointing to be made properly. Adequate clearance for proper jointing pipe laid in rock shall be provided at bell holes.

(K) - The use of excavating machinery will be permitted except in places where its operation will cause damage to trees, buildings, or existing structures above or below ground; in which case hand methods shall be employed.

(L) - Trees, fences, poles and all other property shall be protected unless their removal is authorized: Any property damaged shall be satisfactorily restored by the Contractor.

(M) - Hydrants under pressure, valve pit covers, valve boxes, curb Shut-off fire or police call boxes, or other utility controls shall be left unobstructed and accessible during the construction period.

(N) - The Contractor shall maintain all excavations in good order during the construction, so as not to hinder or injure the pipe laying, masonry or other work. He shall take all reasonable precautions to prevent movement of the sides of such excavation, and shall remove at his own expense any material sliding into the excavation.

SHEETING AND BRACING

(A) - The Contractor shall furnish and put in place such sheeting and bracing as may be required to support the sides of trenches or other excavation and shall remove such sheeting and bracing, as the trench or excavation is filled up, unless the Engineer shall order it left in place, in which case the Contractor shall cut the plank off at a height as ordered by the Engineer, or as called for on the contract drawings. A Quantity of 2 M.B.M. has been provided in the General Summary for Item Special, Sheeting Left in Place.

(B) - Whenever the excavations for the work are immediately adjacent to other subsurface structures, the Contractor shall furnish and place sheeting and bracing where noted on contract drawings and as may be necessary so as to reduce to a minimum the possibility of injury or damage the same.

(C) - If the Engineer is of the opinion that at any point sufficient or proper supports, sheeting, or bracing have not been provided, he may order additional supports, sheeting or bracing, at the expense of the Contractor, and the compliance with such orders by the Contractor shall not relieve or release him from his responsibility for sufficiency of such supports.

REMOVAL OF EXCAVATED MATERIAL

(A) - All surplus material and such other material as the Engineer may deem unfit for use as backfill shall be disposed of by the Contractor so as to give a minimum of inconvenience to the public. In case of settlement after backfill, the Contractor shall supply sufficient material satisfactory to the Engineer to make up for the deficiency.

(B) - In the storing of excavated material, which is to be used as a backfill, the Contractor shall exercise care so as to avoid inconveniencing the public. If, in the opinion of the Engineer, it is necessary to remove this excavated material from the streets or lots, the Contractor shall be required to do so.

(C) - Any material which may spill or drip from vehicles by hauling in the streets, shall be removed and the streets cleaned by the Contractor, to the satisfaction of the Director of Public Service of the City of Cleveland or the proper officials of the municipality or township in which the work is being done.

(D) - When so directed by the Engineer, the Contractor shall immediately remove all excavated materials from the site, and dispose of the same.

LAYING PIPE

(A) - Proper implements, tools, and facilities, satisfactory to the Engineer shall be provided and used by the Contractor for the safe and convenient prosecution of the work. All pipe, fittings, and valves shall be carefully lowered into the trench, piece by piece, by means of derrick, proper slings, and other suitable tools or equipment, in such manner as to prevent damage to pipe or coating. Under no circumstances shall pipe or accessories be dropped or dumped into the trench. If any defective piece is discovered while pipe is suspended or after being laid, a new piece shall be furnished and installed by the Contractor.

(B) - All foreign matter or dirt shall be removed from the inside of the pipe before it is lowered into its position in the trench, and it shall be kept clean by approved means during and after laying.

(C) - At times when pipe laying is not in progress, the open ends of pipe shall be closed by approved means, and no trench water shall be permitted to enter the pipe. No pipe shall be laid in water, or when the trench conditions or the weather is unsuitable for such work, except by permission of the Engineer.

(D) - Wherever necessary to deflect pipe from a straight line, either in the vertical or horizontal plane to avoid obstructions, to plumb stems, or for other reasons, the degree of deflection shall be approved by the Engineer.

(E) - Before laying cast iron or ductile iron pipe, all lumps, blisters and excess coal tar coating shall be removed from the bell and spigot ends of each pipe, the pipe ends shall then be kept clean until joints are made.

GENERAL

FLOATING

The Contractor shall take every precaution against the floating of the pipe due to water coming into the trench, or through caving in, flushing or puddling. In case of such floating the Contractor shall replace the pipe at his own expense, and make wholly good any injury or damage which may have resulted.

TESTING MAINS

(A) - All pipes, valves, fittings, etc., shall be laid in such a manner as to leave all joints watertight. After the pipe is laid, and before backfill is placed around the joints, such lengths of the water main as the Engineer may determine, shall be tested under a hydrostatic pressure of seventy-five (75) pounds per square inch above the static pressure, but nowhere less than 100 pounds per square inch.

(B) - The test shall be under the direction of the Engineer and Director of Public Utilities or his designate. The Contractor may obtain water for testing by observing the rules and regulations enforced in the municipalities or townships in which the work is being done. The City will furnish a pressure gage for measuring the pressure on the water main, but the Contractor shall furnish a suitable pump, pipes, test heads and all appliances, labor, fuel and other appurtenances necessary to make these tests.

(C) - The test pressure shall be maintained for a sufficient length of time to allow for a thorough examination of joints and elimination of leakage where necessary. The pipe lines shall be made absolutely tight under the test pressure.

(D) - After a section of the water main has been tested, the Contractor shall drain the main. In case the drains are connected to valve or drain vaults, then the Contractor, within a reasonable time after the test has been completed, shall pump all water out of the vaults.

(E) - In cold weather immediately after testing a section of the water main, the Contractor shall open all valves, air relief valves, by-passes and drains and properly drain bonnets of all valves in the section of the water main, and take all other precautions necessary to prevent injury to the water main and appurtenances due to freezing.

(F) - As an alternate for testing concrete and steel mains other than by the preceding method, the Contractor may choose the following procedure:

The water main shall be tested under the same hydrostatic pressure as previously noted. The test pressure shall be maintained for a period of two (2) hours by pumping additional water into the main, if necessary. The quantity of water thus pumped into the main multiplied by twelve (12) shall be taken as the leakage per twenty-four (24) hours.

(G) - The permitted leakage shall not exceed a rate of seventy-five (75) gallons per twenty-four (24) hours per mile of pipe per inch of nominal diameter.

(H) - In calculating leakage, the Engineer will make allowance for any leakage at the valves, the removeable bulkheads, etc.

(I) - In using this method of testing, the Contractor may backfill the pipe except at lead joints, flanged joints, victaulic couplings, and drain connections immediately following the laying and before the actual test has been made. In case the leakage exceeds the permissible amount mentioned above, the Contractor shall find the leak and make the joints tight. The Contractor shall furnish suitable means for determining the quantity of water lost by leakage during the test.

(J) - In order to be able to make proper allowances for leakage at valves, etc., previously noted, only such sections of water main may be selected for test as will have such valves, removable bulk-heads, etc., accessible.

(K) - The evaluation of actual leakage to standard pressure (150 lbs.) leakage is calculated by the application of the ratio determined from the square root of respective pressures, other factors being equal.

CLOSING VALVES The closing of all gate valves on water mains for making connections, tests, or for any other cause, will be done by the City of Cleveland and 3 weeks notice shall be given to the City, by the Contractor, so that the work may be done with a minimum of inconvenience to the public and delay to the Contractor. System demands may control the time of day, week, month or year, when valves may be closed. No consideration for delays caused by such controlling demands will be allowed. The contractor shall thoroughly investigate possible conditions where closing of valves may be restructed to a certain time. The City Water department will specify the time and/or special conditions when work may be performed.

BACKFILLING

(A) - This work includes all backfilling, together with ramming, puddling, and rolling, as required; the regrading of grounds; the replacing of surface and subsurface structures; the placing and maintaining of temporary sidewalks, and driveways; the furnishing of suitable material for backfill, reseeding lawns and replacing trees and shrubbery damaged by the Contractor; and all appurtenant work incidental thereto. Pavements, curbs, sidewalks and driveways within the limits of the work shall be temporarily surfaced, maintained and finally replaced or repaved as set forth under "Road Surfaces, Sidewalks, Driveways and Curbing."

(B) - Backfill, unless otherwise specified, may be made with material excavated from trenches, providing it is satisfactory to the Engineer. If, in the opinion of the Engineer, the material excavated is unsatisfactory, then the Contractor shall furnish at his own expense other material suitable for backfill. All backfill shall be free from slag, cinders, rubbish and other objectionable material.

(C) - Before laying the pipe, the bottom of the trench shall be brought to the grade of the bottom of the pipe, except at field joints. Wherever the bottom of the trench has been excavated below the bottom of the pipe, the Contractor shall place sand, or other material satisfactory to the Engineer to bring the bottom of the trench to the grade of the bottom of the pipe. This bed shall be thoroughly tamped before the pipe is laid.

(D) - Unless otherwise specified, the backfill under, around and to a depth of one (1) foot above the top of all pipe, shall be made with material satisfactory to the Engineer, which material shall be free from stone and other objectionable material noted above. The Contractor must use special care in placing this portion of the backfill, so as to avoid injuring, distorting or moving the pipe during compaction. Above this level the backfill shall be made with material satisfactory to the Engineer. However, where ordered by the engineer, sand shall be used for the entire portion of the backfill. See below.

(E) - Backfilling as noted in paragraph (D) shall be tamped in thin layers, simultaneously on each side of the pipe, and thoroughly compacted so as to provide a solid backing against the external surface of the pipe.

(F) - Only after the backfill previously mentioned has been satisfactorily compacted, may work proceed in placing the remaining backfill which must be carefully placed and compacted by tamping, puddling, or rolling. All precautions must be taken to eliminate future settlement. The number of men tampingshall be not less than the number backfilling, and additional men shall be kept in the trench to spread the material.

(G) - Backfilling shall not be done in freezing weather, except by permission of the Engineer, and it shall not be made with frozen material, nor shall any fill be made where the material already in the ditch is frozen.

(H) - The entire backfill shall be made with sand where permanent pavements, curbs, driveways, or sidewalks, have been opened for or undercut by the excavation.

(I) - All sand to be used for backfill shall be as specified in Section 703.02 of the State of Ohio Department of Transportation Construction Materials and Specifications - January 1, 1983."

(J) - Special treatment of the trench will be required where cinder excavation exceeding one foot measured from the top surface is encountered. Before laying the pipe, the bottom of the trench shall be dug below grade and then brought to the grade of the pipe in the following manner, a four (4) inch layer of crushed limestone shall be placed on the entire width of the bottom of the trench followed by a filler of hydrated lime and a layer of three (3) inches of sand. The crushed limestone shall be well graded from fine to coarse and free from slag, cinders, ashes, rubbish or other objectionable material. All limestone must be capable of being passed through a $\frac{3}{4}$ inch sieve. On top of this layer of crushed stone, hydrated lime shall be supplied in the amount of $\frac{3}{4}$ of a pound per square foot of trench. This bed of crushed limestone shall be thoroughly tamped before the 3" layer of sand is placed. The backfill around and to the depth of 3" above the top of the pipe shall be made with sand. The Contractor must use special care in placing this portion of the backfill so as to avoid injuring or moving the pipe when compacting same. On top of the sand the Contractor shall place another layer of crushed limestone five (5) inches thick on the entire width of the trench. On top of the compacted layer of limestone hydrated lime shall then be applied in the amount of $\frac{3}{4}$ of a pound per square foot of trench. The remaining backfill shall be made with sand, carefully placed and compacted by tamping, puddling, or rolling. All precautions shall be taken to eliminate future settlement. The treatment of the trench bottom, previously described, may be omitted where the cinder depth, measured from the top surface does not exceed 2' - 6".

ROAD SURFACES, SIDEWALKS, DRIVEWAYS, AND CURBING

(A) - The Contractor shall remove all pavements and road surfaces within the lines of excavation. After the pipe has been laid, all appurtenant work constructed and backfill completed, he shall furnish, place and maintain, wherever the pavement road surface has been removed or damaged by him, a temporary pavement in the paved portion of streets, or a temporary road surface in the unpaved portion of streets so as to provide a safe and passable roadway until such time as the final pavement or road surface is completed.

(B) - When only a portion of the street is paved and the lines of excavation are in the unpaved portion, the Contractor shall use the utmost care in preventing injury to the pavement. If, in making the excavation or for any other cause the pavement is removed or injured by the Contractor, he shall furnish, place and maintain a temporary pavement wherever the pavement has been removed or damaged, so as to provide a safe and passable roadway until such time as the final pavement is completed.

7. WORK IN AND OVER THE CUYAHOGA RIVER
ALL CONSTRUCTION OPERATIONS IN THE CUYAHOGA RIVER SHALL CONFORM TO THE REQUIREMENTS OF THE U.S. COAST GUARD. THE CONTRACTOR SHALL APPLY FOR AND SECURE ALL NECESSARY COAST GUARD PERMITS FOR CONSTRUCTING FALSEWORK OR OTHER TEMPORARY CONSTRUCTION IN THE RIVER.

ALL WORK SHALL BE SO CONDUCTED THAT THE FREE NAVIGATION OF THE WATERWAY IS NOT UNREASONABLY INTERFERED WITH AND THE PRESENT NAVIGABLE DEPTHS ARE NOT IMPAIRED. THE CONSTRUCTION OF FALSEWORK, PILINGS OR OTHER OBSTRUCTIONS, IF REQUIRED, SHALL BE ACCOMPLISHED IN ACCORDANCE WITH PLANS SUBMITTED TO AND APPROVED BY THE COMMANDER, NINTH COAST GUARD DISTRICT, PRIOR TO CONSTRUCTION OF THE BRIDGE. THE CHANNEL THROUGH THE STRUCTURE SHALL BE PROMPTLY CLEARED OF ALL OBSTRUCTIONS PLACED THEREIN OR CAUSED BY THE CONSTRUCTION OF THE BRIDGE, TO THE SATISFACTION OF THE DISTRICT COMMANDER, WHEN IN HIS JUDGMENT THE CONSTRUCTION WORK HAS REACHED A POINT WHERE SUCH ACTION SHOULD BE TAKEN, AND IN ANY CASE NOT LATER THAN NINETY DAYS AFTER THE BRIDGE HAS BEEN OPENED TO TRAFFIC.

THE CONTRACTOR SHALL NOTIFY THE COMMANDER, NINTH COAST GUARD DISTRICT, TEN DAYS IN ADVANCE OF COMMENCEMENT OF WORK ON THE SUBSTRUCTURE UNITS FLANKING THE RIVER, SO THAT NAVIGATION INTERESTS MAY BE NOTIFIED OF THE PRESENCE OF CONSTRUCTION EQUIPMENT. THE CONTRACTOR SHALL NOTIFY THE SAME OFFICE WHEN WORK IN THE RIVER IS COMPLETED. THE CONTRACTOR SHALL PROVIDE AND MAINTAIN NAVIGATION LIGHTS AND OTHER NAVIGATION SIGNALS OR FACILITIES WHICH MAY BE REQUIRED BY THE U.S. COAST GUARD ON TEMPORARY CONSTRUCTION OR VESSELS.

IN THE CONSTRUCTION OF PIERS 10, 11 AND THE BULKHEAD AT PIER 11 THE CONTRACTOR WILL BE COMPLETELY RESPONSIBLE FOR THE EXISTING DOCKWALLS AND BULKHEADS THAT ARE TO REMAIN IN PLACE. IF ANY PORTION IS DISTURBED INCLUDING THE EXISTING ANCHORAGES, THE DAMAGE SHALL BE REPAIRED OR RESTORED AT THE CONTRACTOR'S EXPENSE. PREBORING HOLES BEFORE DRIVING PILES WILL BE PERMITTED IF THE CONTRACTOR FINDS THIS PROCEDURE NECESSARY TO PREVENT DAMAGE. THESE COSTS WILL BE INCLUDED IN THE COFFERDAM ITEMS.

8. CONSTRUCTION ADJACENT TO AND OVER DUPONT CORPORATION PROPERTY
THE CONTRACTOR SHALL PROTECT THE PLANT, THE EMPLOYEES AND THE PUBLIC FROM DAMAGE OR INJURIES RESULTING FROM FALLING OBJECTS OR FIRE RESULTING FROM CONSTRUCTION OVER THE BUILDINGS AND ADJACENT PROPERTY OF THE E.I. DUPONT DE NEMOURS AND COMPANY, HEREINAFTER REFERRED TO AS DU PONT.

THE CONTRACTOR WILL EXERCISE EXTREME CARE DURING THE CONSTRUCTION OF PIERS 17R AND 18R ADJACENT TO DUPONT BUILDING NO. 2A TO INSURE AGAINST DAMAGE TO THE BUILDING AND EQUIPMENT. THE CONTRACTOR SHALL SUBMIT HIS PROPOSED CONSTRUCTION PROCEDURE AT THESE LOCATIONS TO THE DIRECTOR FOR APPROVAL.

PRIOR TO THE START OF CONSTRUCTION OF PIERS 17R AND 18R, THE CONTRACTOR WILL MAKE A "CRACK AND CONDITION SURVEY," INCLUDING SUITABLE PHOTOGRAPHS OF THE BUILDING. COPIES OF THIS SURVEY WILL BE FURNISHED TO DUPONT AND TO THE DIRECTOR FOR HIS USE AND FILE PRIOR TO CONSTRUCTION.

THE CONTRACTOR WILL, DURING CONSTRUCTION OF PIERS 17R AND 18R, USE MONITORING DEVICES, THE NATURE AND LOCATION OF WHICH SHALL BE SATISFACTORY TO DUPONT, IN ORDER TO DETECT ANY POSSIBLE ADVERSE EFFECTS CAUSED BY THE CONSTRUCTION OPERATION. DUPONT SHALL AT ALL TIMES BE ALLOWED COMPLETE ACCESS TO SAID MONITORING DEVICES AND ANY INFORMATION COMPILED FROM SAID DEVICES. THE DIRECTOR SHALL BE FURNISHED WITH THE LOCATION OF ALL MONITORING DEVICES AND COPIES OF ALL INFORMATION COMPILED THEREIN FOR HIS USE AND FILE.

FOLLOWING COMPLETION OF THE CONSTRUCTION ADJACENT TO THE DUPONT BUILDING NO. 2A, THE "CRACK AND CONDITION SURVEY" WILL BE REPEATED, AND DAMAGE TO THE BUILDING AND EQUIPMENT, IF ANY, RESULTING FROM THE CONSTRUCTION OPERATIONS SHALL BE REPAIRED TO THE SATISFACTION OF DUPONT BY THE CONTRACTOR AT HIS OWN EXPENSE.

IT IS UNDERSTOOD THAT THE RESPONSIBILITY FOR THE CONSTRUCTION ADJACENT TO DUPONT BUILDING NO. 2A REMAINS ENTIRELY WITH THE CONTRACTOR, AND HE ALONE SHALL BE RESPONSIBLE FOR ANY DAMAGE, INJURY OR LOSS RESULTING TO DUPONT FROM SAID CONSTRUCTION.

THIS ITEM SHALL BE PAID FOR AT THE LUMP SUM PRICE BID FOR ITEM SPECIAL - CRACK AND CONDITION SURVEY.

9. HAZARDOUS WASTE MATERIAL AND GROUND CONTAMINATION AT E.I. DUPONT DE NEMOURS AND COMPANY PROPERTY
MANUFACTURE OF CHEMICALS BY E.I. DUPONT DE NEMOURS AND COMPANY, MAY HAVE RESULTED IN GROUND CONTAMINATION BY RAW MATERIALS, INTERMEDIATES, SUPPORT CHEMICALS OR FINISHED PROUDCTS, SOME OF WHICH MAY BE HAZARDOUS. THERE ALSO IS THE POSSIBILITY THAT WASTES AND/OR PIPES AND/OR TANKS MAY HAVE BEEN DISPOSED OF ON THE PLANT SITE.

THE CONTRACTOR SHALL BE AWARE OF POTENTIAL RISKS THAT MAY BE PRESENT AND TAKE APPROPRIATE PRECAUTIONS DURING ANY EXCAVATION OR CONSTRUCTION WORK OR IN DISPOSING OF ANY MATERIALS REMOVED FROM THE SITE. IF DURING THE CONSTRUCTION OPERATIONS ANY EQUIPMENT (TANKS, PIPES, ETC.) OR ATYPICAL SOIL APPEARANCE IS ENCOUNTERED, THE CONTRACTOR, FOR NECESSARY COORDINATION AND MITIGATING MEASURES SHALL CONTACT THE PLANT COORDINATOR.

10. CONSTRUCTION ADJACENT TO RAILROAD TRACKS
CONSTRUCTION CLEARANCE OF 23'-0" VERTICALLY ABOVE THE TOP OF THE RAILROAD RAILS AND 8'-0" HORIZONTALLY FROM THE CENTER OF TRACKS SHALL BE MAINTAINED AT ALL TIMES. SHEETING FOR FOOTINGS AT PIERS 9L, 9R, 10L AND 10R CLOSER THAN 8'-0" OR AS NOTED BELOW SHALL BE CUT OFF AT THE ELEVATION OF THE RAILROAD TIES. THE HORIZONTAL CLEARANCE REQUIRED AT CURVED TRACKS SHALL BE INCREASED 1" PER DEGREE OF CURVATURE. △ BOTTOM

11. SUBSTRUCTURE CONSTRUCTION PROCEDURE
THE CONTRACTOR SHALL SUBMIT A DETAILED CONSTRUCTION PROCEDURE AND SEQUENCE OF OPERATIONS TO THE DIRECTOR FOR APPROVAL AT PIERS 13, 14, 16 THRU 24, 25 C-B, 26 C-B, 27 C-B, ABUTMENT B-C AND RETAINING WALL 82. PARTICULAR ATTENTION SHALL BE GIVEN TO THE COMBINED CONSTRUCTION EFFECTS AT PIERS 20L, 21L AND 22L WITH ABUTMENT B-C AND RETAINING WALL 82. THE CONTRACTOR'S PROCEDURE SHALL INCLUDE PROPOSED EXCAVATION SLOPES, COFFERDAM DETAILS, ORDER OF INSTALLING PILES, AND SEQUENCE FOR BACKFILLING AND FINAL GRADING. BEFORE PLACING CONCRETE FOR ANY SUBSTRUCTURE UNIT, (PIER, ABUTMENT OR WALL), PILING FOR ADJACENT SUBSTRUCTURE UNITS SHALL HAVE BEEN DRIVEN.

IN ORDER TO EXPEDITE SUPERSTRUCTURE CONSTRUCTION THE CONTRACTOR SHALL INITIALLY COMPLETE THE WORK IN UNIT 3. CONCURRENTLY OR SUBSEQUENT TO THIS WORK THE CONTRACTOR SHALL COMPLETE THE SUBSTRUCTURE UNITS IN THE FOLLOWING ORDER: UNIT 2, UNIT 1, UNIT 4, UNIT 5, UNIT 6 AND UNIT 6CB.

THE SUBSTRUCTURE CONTRACTOR AND THE SUPERSTRUCTURE CONTRACTOR ARE REQUESTED TO COOPERATE BY ARRANGING THEIR WORK IN SUCH A MANNER THAT INCONVENIENCE TO EITHER WOULD BE HELD TO A MINIMNUM.

12. EXCAVATION AND EMBANKMENT
EXCAVATION IN CUT SECTIONS SHALL BE COMPLETED AND EMBANKMENTS SHALL BE PLACED AND COMPACTED TO THE FINISH SPILL-THRU SLOPES AND TO THE LEVEL OF THE SUBGRADES, AS SHOWN ON THE PLANS BEFORE EXCAVATION OR ANY CONSTRUCTION WORK IS STARTED ON THE ABUTMENTS AND PIERS 1, 14, 16 THRU 24 AND 23C-B THRU 27C-B.

SEWER NOS. 72 THRU 77, 79, 80, P101, P117, P118, SP3, SP4 AND SP7 THRU SP9 AND THEIR MANHOLES SHALL BE IN PLACE AND THE TRENCHES BACKFILLED AND COMPACTED BEFORE EXCAVATING OR DRIVING PILES FOR THE ADJACENT PIERS OR ABUTMENTS. THE LATERALS WHICH CONNECT DOWNSPOUTS TO CATCH BASINS OR MANHOLES SHALL BE INSTALLED AFTER THE PIERS AND ABUTMENTS ARE CONSTRUCTED. FOR DETAILS OF THE UNDERGROUND SEWER SYSTEM SEE THE ROADWAY PLANS.

14. FOUNDATION DATA
ALL ABUTMENTS AND PIERS ARE FOUNDED ON 14 IN. Ø C.I.P. REINFORCED CONCRETE PILES WITH ESTIMATED AVERAGE PAY LENGTHS AS FOLLOWS:

ABUTMENTS	75 FT
PIERS 1 THRU 4, 16, 17 AND 18	90 FT
PIERS 5, 6 AND 19	80 FT
PIERS 7 THRU 10, 12 AND 13	110 FT
PIER 11	100 FT
PIERS 14 AND 15	120 FT

16. COAL TAR EPOXY COATING

A. DESCRIPTION

1. THIS WORK SHALL CONSIST OF PROVIDING ALL MATERIALS, SUPERVISION, LABOR, EQUIPMENT, TOOLS AND SUPPLIES NECESSARY TO PROVIDE A PROTECTIVE COAL TAR EPOXY COATING SYSTEM FOR THE BULKHEAD REPLACEMENT AT PIER 11.

2. THE COATING SHALL BE APPLIED TO ALL SURFACES OF THE SHEET PILING, WITH THE EXCEPTION OF THE INTERIOR CONTACTING SURFACES OF THE INTERLOCKS AND THE FACE OF THE DEADMAN ANCHOR SHEETING IN CONTACT WITH CONCRETE. THE BULKHEAD CAP, THE ENTIRE WALE ASSEMBLY, THE TIE RODS, TURNBUCKLES AND ALL BOLTS SHALL BE COATED IN THEIR ENTIRETY, EXCEPT FOR THE THREADS AND NUTS WHICH SHALL BE COATED IN THE FIELD AFTER ASSEMBLY.

B. COATING MATERIALS

1. THE COATING SHALL BE SELF-CURING CONSISTING OF TWO COMPONENTS. THE MATERIAL USED SHALL MEET OR EXCEED ALL THE RQUIREMENTS OF THE CORPS OF ENGINEERS SPECIFICATION C-200, GOVERNMENT SPECIFICATION MIL-P-23236 AND STEEL STRUCTURES PAINTING COUNCIL PAINT SYSTEM SSPC-PAINT NO. 16, COAL TAR EPOXY - POLYAMIDE BLACK.

2. ALL COATINGS SHALL BE SO PROCESSED AND PACKAGED AS TO INSURE THAT WITHIN A PERIOD OF ONE YEAR FROM DATE OF MANUFACTURE, THEY WILL NOT GEL, LIVER OR THICKEN DELETERIOUSLY OR FORM GAS IN THE CLOSED CONTAINER.

C. PACKAGING AND LABELING

COATINGS AND VEHICLES SHALL BE PACKAGED IN STANDARD CONTAINERS NOT LARGER THAN 5 GALLONS IN SIZE, WITH REMOVABLE FRICTION OR LUG-TYPE COVERS. EACH CONTAINER OF SEPARATELY PACKAGED COMPONENT SHALL BE CLEARLY AND DURABLY LABELED TO INDICATE THE PURCHASER'S ORDER NUMBER, DATE OF MANUFACTURE, MANUFACTURER'S BATCH NUMBER, QUANTITY, COLOR, COMPONENT IDENTIFICATION, AND THE DESIGNATED NAME AND FORMULA OR SPECIFICATION NUMBER OF THE COATING TOGETHER WITH SPECIAL INSTRUCTIONS.

D. CERTIFICATIONS

1. IN ADDITION TO MEETING THE OTHER QUALIFICATIONS, THE COATING MANUFACTURE SHALL CERTIFY THAT:

A. HE HAS BEEN A PRODUCER OF COATINGS OF THIS CLASS FOR A PERIOD OF AT LEAST TWO YEARS.

B. THE COATING BEING OFFERED UNDER THIS SPECIFICATION IS THE SAME FORMULATION WHICH HAS BEEN MANUFACTURED AND DISTRIBUTED BY HIM DURING THIS TWO YEAR PERIOD.

C. THE COATING BEING OFFERED UNDER THIS SPECIFICATION HAS BEEN SUCCESSFULLY USED IN SEA WATER, IMMERSION SERVICE FOR AT LEAST TWO YEARS.

E. SURFACE PREPARATION

1. ALL SURFACES SHALL BE THOROUGHLY PREPARED FOR COATING APPLICATION IN STRICT ACCORDANCE WITH THE COATING MANUFACTURER'S RECOMMENDATION. ALL CLEANING AND COATING WORK MUST BE PERFORMED IN A HEATED BUILDING. PRECEDING GRIT BLASTING, STEEL MUST BE HEATED TO AT LEAST 100°F TO ELIMINATE POSSIBILITY OF MOISTURE ON THE SURFACES TO BE CLEANED AND COATED.

2. GRIT BLASTING SHALL BE TO CLEAN NEAR WHITE METAL BLAST AS DEFINED BY SSPC SPECIFICATION SP-10. ALL WORK BLASTED IN ONE DAY MUST BE COATED ON THAT DAY.

3. ANY AREAS OF THE SURFACE WHICH SHOW TRACES OF OIL, GREASE OR OTHER ORGANIC MATTER SHALL BE REMOVED PRIOR TO COATING. THE CONTAMINATION SHALL BE REMOVED BY USING A SOLVENT WASH AS DEFINED BY STEEL STRUCTURES PAINTING COUNCIL SPECIFICATION SP-1.

4. ALL SURFACES TO BE COATED MUST BE COMPLETELY DRY, FREE OF MOISTURE, SOIL, DUST, GRIT, AT THE TIME THE COATING IS APPLIED.

5. THE FINISHED COATING SHALL BE POST-CURED UNDER COVER AT A TEMPERATURE OF APPROXIMATELY 110°F WHEREVER THE AMBIENT AVERAGE TEMPERATURE FALLS BELOW 70°F.

F. APPLICATION OF COATING

ALL COATINGS SHALL BE APPLIED BY BRUSH OR SPRAY, USING COMMERCIALLY AVAILABLE SPRAY EQUIPMENT. THE COATINGS SHALL EXHIBIT REASONABLE LEVELING WITHOUT EXCESSIVE SAGGING WHEN APPLIED AT THE REQUIRED FILM THICKNESS. COATING MANUFACTURER'S RECOMMENDATIONS SHALL BE ADHERED TO STRICTLY. THE TEMPERATURE OF THE COATING SHALL NOT BE LESS THAN THE TEMPERATURE OF THE STEEL AT THE TIME OF APPLICATION THE TEMPERATURE OF THE SUBSTRATE MUST BE AT LEAST 5°F ABOVE THE DEW POINT TEMPERATURE.

G. PROGRESS OF COATING WORK

WHERE COATING ON ANY TYPE OF SURFACE HAS COMMENCED, THE COMPLETE COATING OPERATION, INCLUDING PRIMING AND FINISHING COATS WHEN MULTIPLE COATS ARE USED ON THAT PORTION OF THE WORK, SHALL BE COMPLETED AS SOON AS PRACTICABLE, WITHOUT PROLONGED DELAYS, WHERE NECESSARY, SUFFICIENT TIME SHALL ELAPSE BETWEEN SUCCESSIVE COATS TO PERMIT THEM TO DRY PROPERLY FOR RECOATING AND THIS PERIOD SHALL BE MODIFIED AS NECESSARY TO SUIT SHOP CONDITIONS. FASTER BETWEEN-COAT APPLICATIONS ARE POSSIBLE AT HIGHER TEMPERATURES; FOR EXAMPLE, IF INITIAL COAT IS APPLIED AT 100°F BY USE OF AN IN-LIVE HEATER, A SECOND COAT MAY USUALLY BE APPLIED WITHIN THREE HOURS AFTER THE FIRST COAT.

H. COATING THICKNESS

1. A MINIMUM THICKNESS (NOT AVERAGE) OF 16 MILS DRY FILM IS REQUIRED ON ALL SURFACES TO BE COATED.

2. WHERE TWO COATS ARE REQUIRED TO ACHIEVE THE RECOMMENDED FILM BUILD, THE INTERVAL BETWEEN THE COATS SHOULD BE AS SHORT AS POSSIBLE. TO INSURE MAXIMUM INTERCOAT ADHESION, IT IS RECOMMENDED THAT:

A. THE NEXT COAT BE APPLIED AS SOON AS POSSIBLE AFTER THE PREVIOUS COAT IS FIRM.

B. IF PREVIOUS COAT HAS CURED FOR MORE THAN RECOAT TIME SPECIFIED BY MANUFACTURER, BRUSH SANDBLAST, FOLLOWED BY DRY CLEANING SUCH AS VACUUMING, USE OF AIR HOSE OR SWEEPING TO REMOVE DIRT. ALL SURFACES TO BE RECOATED MUST SHOW A SURFACE PROFILE SUFFICIENT TO PROVIDE AN ADEQUATE MECHANICAL BOND. SURFACE PROFILE IS ESSENTIAL FOR INTERCOAT ADHESION.

I. FINAL CURING TIME

COATING SURFACES SHALL BE PERMITTED AS LONG A DRYING TIME AS PRACTICABLE BUT IN ANY EVENT THE FOLLOWING MINIMUM REQUIREMENTS SHALL BE MET. THE STEEL COATED WITH THE COAL TAR EPOXY SYSTEM SHALL NOT BE DRIVEN UNTIL THE FINISHED COATING HAS CURED AT LEAST 7 DAYS AT 77°F, OR BEEN POST-CURED AT HIGHER TEMPERATURES FOR A SHORT PERIOD OF TIME IN ACCORDANCE WITH THE COATING MANUFACTURER'S RECOMMENDATIONS.

J. THINNING

THIN THE COATING FOR APPLICATION IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS.

K. INSPECTION

1. SATISFACTORY PERFORMANCE WILL BE BASED ON ACCEPTANCE OF THE COMPLETED WORK BY THE ENGINEER. ALL WORK WILL BE SUBJECT TO THE INSPECTION BY THE ENGINEER. THE GRIT BLASTING IS TO BE APPROVED BEFORE THE START OF THE COATING APPLICATION.

2. INSPECTION OF THE COMPLETED COATING WILL BE BASED UPON A NORDSON MIKROTEST OR OTHER MAGNETIC DETECTOR READINGS. DETECTION OF INADEQUATELY COATED SECTIONS WILL BE INDICATED BY CIRCLING WITH CHALK THE AREAS TO BE RECOATED.

L. APPEARANCE OF FINISHED COATING

1. THE FINISHED COATING SHALL BE GENERALLY SMOOTH AND FREE OF SHARP PROTUBERANCES WHICH COULD BE REMOVED BY ABRASION. A MINOR AMOUNT OF SAGS, DIMPLING OR CURTAINING WHICH DOES NOT EXCEED 2 TO 3% OF THE SURFACE WILL NOT BE CONSIDERED CAUSE FOR REJECTION UNLESS THEY PRESENT SHARP EDGES WHICH MIGHT BE REMOVED BY ABRASION.

2. SHARP PROTUBERANCES SHALL BE CUT OFF USING A SHARP WOOD CHISEL LAID FLAT AGAINST THE SURFACE. THE AREAS FROM WHICH MATERIAL HAS BEEN REMOVED SHALL BE RECOATED TO SMOOTH THE SURFACE.

M. PROTECTION OF COATED STEEL

THE CONTRACTOR SHALL EXERCISE EXTREME CARE IN THE HANDLING OF ALL COARSE STEEL SO AS NOT TO DAMAGE THE COATED SURFACE. ANY DAMAGE TO THE COATING DUE TO HANDLING OR CONSTRUCTION OPERATIONS SHALL BE REPAIRED BY THE CONTRACTOR AT NO ADDITIONAL EXPENSE.

N. SAFETY

1. IF THE COATING IS APPLIED BY SPRAY IT SHALL BE PERFORMED IN AN ENCLOSED PLACE WITH A FORCED VENTILATION SYSTEM. THE SYSTEM SHALL BE CAPABLE OF POSITIVELY EXCHANGING THE AIR IN THE ENCLOSED PLACE FOR FRESH AIR AT THE RATE OF NOT LESS THAN 5,000 CUBIC FEET PER MINUTE FOR EACH SPRAY GUN IN OPERATION, AND ALL PARTS OF THE SPACE SHALL BE SWEPT BY MOVING AIR. THE VENTILATING SYSTEM SHALL BE OPERATED DURING THE ENTIRE OPERATION OF APPLICATION AND SHALL BE CONTINUED AFTER SPRAYING HAS BEEN HALTED UNTIL THE APPLIED FILM IS NO LONGER GIVING OFF APPRECIABLE SOLVENT VAPORS. THE AIR IN THE ENCLOSED PAINTING SPACE SHALL BE SAFE AT ALL TIMES FROM FIRE AND EXPLOSION HAZARDS AS DETERMINED BY THE EXPLOSIMETER, MANUFACTURED BY THE MINE SAFETY APPLIANCE COMPANY. WHERE SPRAYING IS BEING CARRIED OUT IN ENCLOSED OR OTHER SPACES NOT FREELY SWEPT BY NATURAL WIND CURRENTS, WORKMEN SHALL WEAR RESPIRATORS FED BY FRESH AIR. GRIT BLAST NOZZLE OPERATORS SHALL WEAR FRESH-AIR-FED HELMETS UNDER ALL CIRCUMSTANCES.

2. IN ADDITION TO NORMAL SAFETY PRECAUTIONS, WORKMEN SHALL TAKE EXTRA CARE TO AVOID CONTACT OF THE PAINT WITH THE SKIN AND TO AVOID INHALING FUMES OR ATOMIZED PARTICLES OF THE COATING.

O. MEASUREMENT AND PAYMENT

SEPARATE MEASUREMENT AND PAYMENT WILL NOT BE MADE FOR COAL TAR EPOXY COATING. THE COST CONNECTED THEREWITH SHALL BE INCLUDED WITH THE APPROPRIATE ITEM AS SPECIFIED.

17. STEEL SHEET PILING

Pile layout dimensions are measured along bottom of footing.

The following abbreviation is used:
ef = each face

For piers set in sloped areas (Piers 1, 11, 13, 14, 16 thru 24, 25C-B, 26C-B and 27C-B) the final required ground line elevations above the footings are tabulated on the pier sheets. The elevations shown are at the intersection of the centerline pier or centerline column and footing, and the edge of footing. Generally, when only two elevations per footing are tabulated the slope is uniform over the footing, when four elevations per footing are tabulated the slope varies over the footing. For the final grading configuration within the footing limits see the Roadway Plans. Final ground shall be established prior to pier construction. Pier backfill shall be placed and compacted on the low side of the column prior to or simultaneous with the placing of backfill on the high side of the column.

For additional notes relating to the construction of the Piers see Sheet 9/80
