Subject: High pressure gas along SR 256

Jason/Julie,

We did get confirmation on the gas line on the north side of SR 256. The line is located approximately 36 feet from the center line of SR 256, see email below. This verifies that the gas line would need to be relocated if we moved any further to the north. We made the right decision to proceed with the design remaining as it is currently shown.

Douglas N. Morgan, P.E.

Subject: RE: OUPS need

The lines were located this morning and placed in a new drawing (referenced to Ohio South grid). We were unable to add them to the existing survey drawing done by the consultant. The flags were shot and we assume they tie into the gas markers and that is represented in the linework. The markers are designated by the circles on the drawing. Here is the location of the drawing.

I:\ProjectData\FAI\110412\Design\Survey\Basemaps\110412_BR001_review_AdditionalPipelineData

The raw survey data is located in the following folder.

I:\ProjectData\FAI\110412\Design\Survey\RawData\TSC3

Let us know if you have any questions.

Subject: RE: OUPS need

Steve from Trans Canada needs to be onsite for any excavation close to their two high pressure lines. He marked the lines or was planning to very soon. Dan and Zak, please make another site visit before the next round of snow.

It was staked on the approximate north R/W 200' east and west of the Hutchison house. Zak will stop by tomorrow morning to see if anything was marked by the gas company.

Thanks

Daniel Erford, PS

Zak/Dan,

In the attached file, I marked the location where we need to find the 3" high pressure gas line (Columbia gas) that is located on the north side of SR 256.

Thanks,

Douglas N. Morgan, P.E.
